SECNO=River Mileage (above Advance Wastewater Treatment Plant)
Starting Discharge for 950 is reduced by 870 cfs to account
for upstream breakouts which do not return to the channel
concurrently with the peak channel flow.

          Model of Q50 and Q100 breakouts in left overbank between Lamb Blvd
          and Lake Mead Blvd.  Use truncated xsecs from full HEC-2 model.
          Add 10.0 to xsec numbers from full model.
          Start at x-6.92 with full Q100 flow, and floodplain in LOB
          encroached to reasonable expansion limits.  Q50 overbank flow does
          not return to channel here; keep separate.  Use ET cards for
          x-6.92 to x-17.97 to set approx 1:1 expansion limits.
          Flows come from R4_MID_SF.out; split flow run for main channel.

3265 DIVIDED FLOW

3470 ENCROACHMENT STATIONS= 6200.0 11437.0 TYPE= 1 TARGET= 5237.000
Model of Q50 and Q100 breakouts in left overbank between Lamb Blvd
and Lake Mead Blvd. Use truncated xsecs from full HEC-2 model.
Add 10.0 to xsec numbers from full model.
Start at x-6.92 with full Q100 flow, and floodplain in LOB
encroached to reasonable expansion limits. Q50 overbank flow does
not return to channel here; keep separate. Use ET cards for
x-6.92 to x-17.97 to set approx 1:1 expansion limits.
Flows come from R4_MID_SF.out; split flow run for main channel.

Model of Q50 and Q100 breakouts in left overbank between Lamb Blvd and Lake Mead Blvd. Use truncated xsecs from full FEC-2 model. Add 10.0 to xsec numbers from full model. Start at x-6.92 with full Q100 flow, and floodplain in LOB encroached to reasonable expansion limits. Q50 overbank flow does not return to channel here; keep separate. Use ET cards for x-6.92 to x-17.97 to set approx 1:1 expansion limits. Flows come from R4_MID_SF.out; split flow run for main channel.

      47
    6.75  Split flow run for Q100 and Q50 - LOB modeled separately
    6.75  Lamb Blvd - Normal Bridge routine - 1 ft debris loading
    6.75  Q500 restricted to 1:1 expansion from 6.92 to 6.16
    6.75  CL = 10000
    6.92  CL = 11370
    6.92  Upstream LOB overflows return to model.
    7.14  CL = 12260
    7.14  Q50 breakout in ROB reduce downstream flows.  Breakout not modeled.
    7.14  Q100 ROB breakout modeled separately.
    7.34  CL = 12370
    7.60  Owens Avenue Bridge - normal bridge routine - 2 ft debris loading
    7.60  CL = 11490
    7.68  CL = 11800
    7.97  CL = 12520
    7.97  Q50 breakout in LOB reduces downstream flows.  Breakout not modeled.
    7.97  Q100 breakout in LOB modeled separately.
    8.19  START DOWNSTREAM OF LAKE MEAD BLVD BRIDGE
    8.19  CL = 8980
    8.27  LAKE MEAD BLVD BRIDGE
    8.27  Q50 breakout in LOB reduces downstream flows.  Breakout not modeled.
    8.27  Q100 breakout in LOB modeled separately.
    8.27  Carey Ave Q25 breakout returns to channel
    8.27  CL = 9050
  8.271   Q25 breakout in ROB is subtracted from channel Q
    8.31  CL = 9080
    8.61  CL = 8010
    8.61  Q50 breakout over Pecos reduces d/s flows.  Breakout not modeled.
    8.61  Q100 breakout over Pecos modeled separately.
    8.85  CL = 7090
    8.90  CAREY AVE BRIDGE
    8.90  Normal bridge; approximation of arch culvert.
    8.90  May need to modify ER points for very low flows.
    8.90  CL = 10000
    8.91  CL = 10000
  8.911   Q25 reduced for LOB and ROB breakouts.  ROB returns downstream
  8.911   of Carey Ave bridge.  LOB returns at Pecos/Lake Mead.
  8.911   Q50 breakout in ROB does not return to channel.
    9.06  CL = 7310

C
C        9
C    6.92  Model of Q50 and Q100 breakouts in left overbank between Lamb Blvd
C    6.92  and Lake Mead Blvd.  Use truncated xsecs from full HEC-2 model.
C    6.92  Add 10.0 to xsec numbers from full model.
C    6.92  Start at x-6.92 with full Q100 flow, and floodplain in LOB
C    6.92  encroached to reasonable expansion limits.  Q50 overbank flow does
C    6.92  not return to channel here; keep separate.  Use ET cards for
C    6.92  x-6.92 to x-17.97 to set approx 1:1 expansion limits.
C    6.92  Flows come from R4_MID_SF.out; split flow run for main channel.
