NAME/TITLE

Les Sakumoto, FEMA Jon Walters, Nolte
Scott Lyle, Nolte *Jeff Daniel, Nolte*

SUBJECT

1. Las Vegas Wash
   - Duck Creek
     - Create plots of Las Vegas Wash and Duck Ck mapping separate from the combined mapping to be presented on the final sheet. Provide explanation describing how combined mapping was developed.
     - Need to verify topo match (Nimbis topo) at Rebel Rd.
   - Range Wash
     - Overlay our mapping on G.C. Wallace LOMR. Provide explanation for the 9' WSEL discrepancy (due to the LOMR using a combined discharge of 15,000cfs).
   - Flamingo Wash
     - Our tie in location is at the second cross section (XS20) due to the starting water surface elevation (1705') of the Flamingo Wash model. Model should be started with Las Vegas Wash model elevation at cross section 426 of 1710.14'.
   - Provide text explaining all tie-ins. *Place within profile concurrence section.*
   - Upstream Study
     - Call Pernille and let her know we are close to submitting and that Les recommended using our model to start upstream study.
   - Mapping
     - Put community boundaries on sheets.
     - Create a Title Sheet that includes map key with community boundaries.
     - Provide a layering description text file.
     - Complete FEMA-37 digital submittal checklist including mapping projection and layering option (Option 2) used.
     - Call Jim Norby @ Baker Engers (703-317-3078) and verify CAD file submittal requirements
       - Suggest inserting all xrefs in sheets C1-C4 and provide raw topo files in a separate directory.
   - TSDN & CD submittal
     - Provide two cd's
       - CD1 with PDF's only no CAD files
       - CD2 with PDF's and CAD files
     - Send Les both CD's, profiles and sheets

- For all future FEMA contracts, we must include structures in all new aerial topographic *mapping prepared for project.*
- Send Les an email informing him of Clark County submittal to TEC.

OTHER INDIVIDUALS INVOLVED

NAME/TITLE

Les Sakumoto, FEMA Jon Walters, Nolte
Scott Lyle, Nolte Jeff Daniel, Nolte

SUBJECT

1. Las Vegas Wash
   - Revised topo was reviewed and accepted.
   - 500-year floodplain mapping information to be supplemented with USGS topo (1"=2000'), if necessary
   - Large fill area upstream of Vegas Valley Dr. should be included in analysis. Nolte to check with County (Robert Thompson) or other local agencies to obtain plans.
   - 100-year water surface at upstream face of Charleston Blvd. should match within 0.5 feet of the in-channel flow from upstream analysis by Ensign & Buckley. Any breach upstream of Charleston is to be ignored unless flow returns to the channel (check with Pernille at Baker Engineers).
   - Les requested that we call Pernille and coordinate Duck Creek mapping with Las Vegas Wash mapping.
   - Keep Las Vegas Wash as HEC-2 model. Do not use HEC-RAS for analyses.

2. Reno
   - ERM documentation to be added to maps. Create ERM tables for the TSDN's.
   - Map format for presentations for community meetings should be in color like the example provided by Les. Do not show cross section locations. Our title block is acceptable.
   - Profile sheets should contain all cross section labels if not too crowded. At a minimum, show cross section labels at major inflection points.
   - Submittals should include the following
     - separate CD for SV, GV and HV. Leave cd-writing session open. At a minimum, CD should include mapping files, HEC-2/HEC-RAS files, and FIS text.
     - Les will provide us with the cd directory structure by 7-10 (prepared by D & D).
     - Submit CAD files in DWG and DXF format (for Les only). Les doesn't need a copy of TSDN (only for TEC).
   - Provide Les with a building count for all areas (Does not need to be in TSDN).
   - Add 100-year discharge labels with arrows to all mapping.
   - 10-year and 50-year hydraulic runs are not required.
   - Add "End of Detailed Study" to where it applies.
   - Label road crossings on all profiles.

OTHER INDIVIDUALS INVOLVED

NAME/TITLE

Les Sakumoto, FEMA Jon Walters, Nolte
Scott Lyle, Nolte Jeff Daniel, Nolte

SUBJECT

1. Las Vegas Wash
   - Currently a GPS "bust" on Las Vegas Wash topo. It was agreed that a total station check to a bench mark is the only way to know for sure what "bust" is. Nolte will do topo check, advise Les of results, and resolve before remapping.
   - Lake Las Vegas design change has been incorporated into hydraulic analyses. We have received approval of hydrology from Kevin Eubanks, Clark County FCD.
   - Prepare hydraulic runs for 10-, 50-, 100-, and 500-yr discharges (consistent with previous upstream study). Show mapping of 100-yr, 500-yr, and floodway.
     - Quad sheets can be used to supplement digital topo for analysis and mapping the 500-year event.
   - Assume flow is in channel at Charleston Blvd (no spills). E&B study is on hold so assume match at Charleston Blvd. Check BFEs at Charleston Blvd.
   - Digital files to be submitted in CD-R format (1 copy to Baker, 1 copy to Les)
     - CADD files submit DXF and DWG
     - HEC-2 files
   - Hard copy plots to be submitted on Vellum bond (No Mylars needed at this time). Send one set of bluelines to Les upon submittal.
   - Les will provide a copy of "FIS plot" and "Check2" programs
   - Report is to be an addendum to Clark and Washoe County FIS (see back of Clark County FIS for an example). Include discussion on contiguous map check (how do we tie-in to washes).
   - Nolte needs to obtain a copy of the Range Wash mapping and implement.
   - Duck Creek to be modeled as follows (Scott to pass this information on to Pernille Buch-Anderson @ Baker Engineers):
     - A model containing sections from Lake Las Vegas to Duck Creek containing Las Vegas Wash as a tributary inflow (100-year discharge of 11,500 cfs).
     - A second model starting with the water surface elevation of the first model at the confluence with Duck Creek and extending to Charleston Blvd. (100-year discharge immediately upstream of Duck Creek Wash is 7,100 cfs).
   - Project Las Vegas Wash water surface elevations into Flamingo and Range Washes on floodplain mapping.
   - Revisions to current plot sheets
     - Provide index on each sheet
     - Note NGVD 29 datum used and include '88 datum
     - Turn on tic marks for coordinates - put note on sheet specifying Nevada state coordinates and projection.
     - Note date and source of topographic mapping.
     - Use method 2 in FEMA 37 Guidelines for layering convention.

- Turn off stream layers in areas outside of floodplain.
- Add elevation reference marks (ERMs) on each sheet.
- Don't show alpha sections on mapping. Baker will determine where these sections will go.
- Show Henderson City limits.

- Projected submittal date (end of March) will be met providing topo issue does not delay.
- Have a continuous plot prepared for community meetings.

2. General
   - Bill Lace @ Baker Engineers and Mike Grimm @ FEMA are contacts for submittal and mapping requirements.
   - For TSDNs:
     a. Include survey topo check data.
     b. Include one set of aerial photographs.
     c. Certification forms.
     d. Cross sections with water surface elevations (no extended sections).
   - Run floodway for Golden Valley but don't map.

OTHER INDIVIDUALS INVOLVED

NAME/TITLE
Les Sakumoto, FEMA Jon Walters, Nolte
Scott Lyle, Nolte
Jeff Daniel, Nolte

SUBJECT

1. Virginia Foothills (Steamboat Springs)
   - Hydrology still being reviewed by TEC.
   - Put on hold - don't have cross section data prepared yet (may not need depending on results of Northwest Hydraulics Study).

2. Verify GPS closure to known point in Las Vegas Wash area.
   - There are problems with GPS in steep terrain areas.
   - Ron Parker will check closure. **(done)**
   - Les : Finding that you can't just accept GPS without closure to hard point. Need to supplement with field survey. **(done)**

3. Sun Valley
   - Nolte's USGS flood frequency results are higher than SEA HEC-1 study. This is typical of northern Reno area.
   - Check one standard error (deviation) on discharges against SEA results.
   - Use similar confluence limits as SEA study when reducing discharges in reach. Proration of discharge by drainage area okay to use for these analyses.
   - Prepare hydraulic runs and mapping for 100-yr, 500-yr, and floodway. Optimize 1-foot in floodway run with equal conveyance reduction.
   - Summarize hydrology for 10-, 50-, 100-, and 500-year discharges.

4. Prepare work maps for meetings and TEC submittal at 1"=200' (1"=400' also okay). Splice sheets together and color for community meetings.

5. All files (hydrology, hydraulics, USGS regional flood frequency program, text files, AutoCAD files, etc.) should be burned onto CD for TEC submittal. Follow TSDN order/content and document thoroughly. Include .DXF file copies of all .DWG files.

6. Golden Valley
   - Prepare hydraulic runs and mapping for 100-yr, 500-yr, and floodway. Optimize 1-foot in floodway run with equal conveyance reduction.
   - Summarize hydrology for 10-, 50-, 100-, and 500-year discharges.
   - Show mapping of road overtopping at downstream study limits.
   - Add section at downstream limit to determine starting water surface elevation and to show flow down highway, if any.

7. Hidden Valley
   - Summarize hydrology for 10-, 50-, 100-, and 500-year discharges.
   - Only map 100-year floodplain.
   - Document that 100-year volume is much greater than detention basin size (include sediment inflow).
   - Document drainage areas for alluvial fan, detention basin and overall.
   - Show Zone X mapping from golf course club house (downstream limit of Zone AE) to Steamboat Springs. Perform analyses to check depth of Zone X.
   - Les will send copy of exhibit from Ed Miflin's review.

8. Las Vegas Wash
   - Les will have Baker Engineers send Duck Creek mapping.
   - Prepare hydraulic runs for 10-, 50-, 100-, and 500-yr discharges (consistent with previous upstream study). Show mapping of 100-yr, 500-yr, and floodway.
   - Assume flow is in channel at Charleston Blvd (no spills). E&B study is on hold so assume match at Charleston Blvd.

9. Ship submittal to TEC before community meetings. Want TEC to review before showing community results.

OTHER INDIVIDUALS INVOLVED

NAME/TITLE
Nevada Department of Transportation (NDOT)
Clark County Department of Public Works (DPW)

SUBJECT
Performed research at NDOT and DPW to obtain as-builts for Charleston Blvd, Nellis Blvd, Sahara Ave and Vegas Valley Road crossings of Las Vegas Wash.

1. NDOT only had curb-to-curb drawings of Charleston and Nellis Blvds. These drawings did not provide any information on bridge crossings.
2. DPW (Public Works Map Room) database showed as-built information (drawings) for Charleston and Nellis Blvds, and Vegas Valley Road. Sahara Ave. has not been as-built because project still under construction (although bridge has been built for some time).
3. Purchased as-builts of Charleston and Nellis Blvds.
4. Vegas Valley Rd as-builts were missing from files. Roger at DPW (Engineering Design) will research whereabouts.
5. Call Ken Lambert at DPW (702/455/6050) to determine status of Sahara Avenue as-builts.
6. List of researched drawings:
   - L00844 Charleston & Nellis Blvds As-builts
   - L00749 Golf Cart Bridge
   - L00785 Golf Cart Bridge
   - L01317 Flamingo Wash at Desert Hills Golf Course
   - L00881 Vegas Valley Road at Las Vegas Wash

MEETING ATTENDANCE RECORD

LOCATION: Nolte & Associates, San Diego, CA DATE: July 23, 1997

NATURE OF MEETING: Status of Washoe and Clark County FEMA studies.

NAME	ORGANIZATION	PHONE
Les Sakumoto	FEMA	415-923-7183
Jon Walters	Nolte & Associates	619-385-0500
Scott Lyle	Nolte & Associates	619-385-0500
Dan Schaff	Nolte & Associates	619-385-0500

MEETING MINUTES

ATTENDEES:	**Les Sakumoto - FEMA** **Jon Walters - Nolte** **Dan Schaaf - Nolte** **Scott Lyle - Nolte**	**DATE:**	**July 23, 1997**
SUBJECT:	**WACCO MTG**	**PROJ #:**	**SD0338/SD0339**

1. Les said, "I can give you time but I can't give you money." He doesn't need a letter on the delays right now.
2. SCALES addendum has been approved. Tell Les who alternate would be for signing addendum (besides JHW) in Corp. office. JHW will send Les an e-mail of alternatives in the corp. office.
3. Told Les that Cooper is slow and not meeting FEMA specs. Nolte has a meeting with them on 8/6.
4. Les told us that they are able to get vertical accuracy with GIS backpacks.
5. Stan Grzeda is now GIS mapping contact at Baker, replacing Denny Watkins.
6. Les to get Will Thomas approval of Hydrology Report before distribution. Expect a 90 day review period.
7. Hydrology Report distribution list:
   - County of Washoe - Leonard Crowe
   - USGS - Rhea Willians
   - No private firms or State people
   - ACOE - Tom Christianson
8. Send Clark County letter (flows approved by Kevin Eubanks) to:
   - Will Thomas (Baker)
   - Pernille Whitaker (Baker)
9. Look at Sun Valley Detention Basins
   - Will dam be overtopped w/ 24-hr storm? What are the differences between our 100-year peak and the .6-hr 100-year event by SEA? What is the peak with the 24-hr 100-year storm?
   - How do upstream detention basins in upper basin affect hydrology? There may be a need to do HEC-1 and routing for this basin. This would be done under an SPR. Wait until Will Thomas reviews the report.
   - If u/s basins greater than 10 year, get S-D-E information from Leonard.
   - If d/s basin doesn't hold the 100 year volume we may need to map down to Sparks. This would be done under an SPR.
10. Hidden Valley
    - What happens when major alluvial fan reaches levee along residential development? How deep will the flow be, will there be any ponding against "levees"?
    - For leveed reach, if no overtopping, must assume entire flow reaches detention basins.
    - Start levee breach at first point where levee doesn't meet freeboard requirement.
    - Key for Les is how we "fix up old floodplains" through houses (map with normal depth rating curve section).
    - Five modes of flooding:
      - Main fan
      - 2nd fan
      - levee failure
      - detention pond spill
      - main fan south of levee at east side of houses
    - Alluvial fan study
      - Include entire topo large plots, old quad, stereo photos
      - Include mapping & analysis through residential development
11. Virginia Foothills
    - hold until NW Hydraulics flows at approved. No Cooper mapping unless absolutely necessary.
12. Las Vegas Wash
    - When finishing field completion, have surveyors check vertical data from Cooper digitized sections.

- Run rough analysis through residential section. Leave Les e-mail w/ results.
- Call Pernille regarding E&B study results (Les to send Pernille a note).
  - HEC-2 runs and mapping
  - Get last portion of HEC-2 deck (Charleston to Washington) to check topo.
  - Check match into Nimbus Engineering Duck Creek Study. Les to get us a copy.

ACTION ITEMS

Dan

1. *Check Sun Valley damn hydrology.*
2. Check Sun Valley u/s detention basins
3. Finish alluvial fan report
   - Map fans though residential area
   - Check levees at residential/park boundary
   - Map flow past detention basin
   - Include entire topo with report (large size)

Scott

1. Send copy of Kevin Eubank's letter, with flow rates, to Will Thomas and Pernille Whitaker.
2. Run analysis through residential section. E-mail Les results.
3. Call Pernille regarding E&B study

John

1. Send Les a list of alternatives to sign addendum for SCALES.

Ron

1. Check vertical data from Cooper digitized sections.

Les Sakumoto, FEMA
Jon Walters, Nolte
Scott Lyle, Nolte
Ron Parker, Nolte
Dan Schaaf, Nolte

SUBJECT

1. Nolte will use a constant adjustment of -2.35 feet to convert from NAVD 88 to NGVD 29 datum for the Las Vegas Wash topo.
2. Washoe County ERMs:
   - Use new curbs, fire plugs, existing monuments
   - Place at even intervals (~0.5 mile spacing)
   - Place ERMs on objects that probably won't be moved or replaced in the future.

   Clark County ERMs:
   - Use existing ERMs where available (avoid areas of known subsidence).
   - Use spikes in power poles
   - Wastewater Treatment Plant
   - Boyd Stadium
   - Spacing can extend beyond 0.5 mile interval through downstream reach because of limited development in area.
3. Cross sections should be tied out digitally on mapping and for surveys.
4. FEMA guidelines do not spell out vertical/horizontal tolerances for ERMs.
5. Les would like to know relative accuracy of topographic mapping produced by Cooper Aerial. Nolte survey crews will return to Reno to set ERMs and check topo accuracy after we receive Virginia Foothills topo. Las Vegas topo check will be made during field cross-sectioning.
6. Our schedule has slipped by approximately six weeks due to the datum conversion and Cooper's production capabilities. We have requested the following order of work from Cooper Aerial:
   - Complete Las Vegas Wash topo
   - Prepare cross section data for Hidden Valley, Golden Valley and Sun Valley
   - Prepare cross section data for Las Vegas Wash
   - Complete Virginia Foothills topo and cross section data.
7. Northwest Hydraulics and E&B studies for Las Vegas Wash are not completed or approved. We will continue our hydraulic analyses for Las Vegas Wash and revise hydrology, if necessary, after confirmation of flows.
8. Les wants us to evaluate reservoir capacity and downstream discharges assuming a 24-hour storm for Sun Valley (Leonard Crowe of Washoe County sending us original backup). Original analyses for storage volume behind Wildcreek Dam was calculated using only a six-hour storm. Results of 24-hour analyses could impact downstream discharges and flood limits.
9. Dan will order Sparks FIRM maps to check floodplain mapping downstream of Wildcreek Dam.
10. Les agreed that summing two upper watersheds runoff quantities to determine downstream discharge is more realistic for hydrology of Golden Valley. The other alternative of calculating runoff of one large basin produced too low of a discharge per acre quantity. Dan will send Les a summary of hydrology

calculations for Golden Valley watershed, and summarize the rationale for adding the subbasin discharges.

11. Les will send us a copy of Will Thomas' recommendation letter addressing USGS regional flood frequency equations.
12. Nolte's hydrology study for Washoe County should be distributed only to affected agencies and communities. We should wait for approval of our hydrology study before finalizing our hydraulic analyses.
13. We can use HEC-RAS for study reaches not tying into other documented study reaches. FEMA wants HEC-2 used for study reaches tying into each other.
14. Les provided Nolte with a handout showing floodplain mapping for the City of Roseville. We should follow the shading and color format of this handout in preparing maps for community meetings.
15. Les gave approval to purchase CD-ROM burner.
16. Les wants both *.dwg and *.dxf files with read.me file on CD submittals. Also include HEC-2/HEC-RAS runs and any digital documentation on CDs.
17. Carefully review sediment transport (aggradation/degradation) and its affect on mapping for the Hidden Valley study.
18. Alluvial Fan submittals should include detailed documentation of what assumptions were made, why they were made, and the different ways the fan was analyzed.
19. Scott will follow-up with Washoe County on Sun Valley Hydrology Study and Masterplan Hydrology Study.

Nolte will research GIS/AutoCADD capability in determining number of structures within floodplain limits using current software packages.

OTHER INDIVIDUALS INVOLVED

NAME/TITLE

Kevin Eubanks, Clark County Flood Control District

SUBJECT

1. Charleston Blvd, Nellis Blvd and Sahara Ave. are all state roads. Obtain plans from NDOT, 123 Washington Ave. (east of Las Vegas Blvd).
2. Vegas Valley Road is a County road. Obtain plans from Clark County Maps & Records or Design Engineering (on Sandy Lane near Clark County FCD).
3. Contact Steve Mano at JMM (702) 878-8010 for as-builts of Lake Las Vegas drainage structures and Parks & Recreation topographic information.
4. Curt Chandler, City of Henderson (702) 565-2329 may also have plans of Lake Las Vegas.
5. Randy Fultz, City of Las Vegas (702) 229-2143 may also have plans of Charleston Blvd.
6. G.C. Wallace (Calvin Black), local civil engineering firm, recently completed a LOMR for Las Vegas Wash from Charleston Blvd to Flamingo Wash (for developers).
7. Contact NDEP for water quality data. Kevin recommends wearing waders if entering Las Vegas Wash - not suitable for direct human contact.
8. Contact Clark County Sanitation District, 5857 E. Flamingo Road, (702) 458-1180 for water quality data of WWTP effluent.
9. Use JMM report to determine Las Vegas Wash discharges. Kevin gave me a copy of JMM HEC-1 input (1988 HEC-1 version). Check model that we get from FEMA against JMM flows.
10. Intake structure at Lake Las Vegas (double 84-inch pipes) will convey 10-year storm.
11. Downstream earth fill dam on Lake Las Vegas has blow out plugs to handle extreme flooding conditions. Kimley-Horn & JMM are designing balloon dam to replace plugs.
12. GIZMO has recently flown (1996?) topography for entire valley (5-foot contour interval).

MEETING MINUTES

ATTENDEES:	**Les Sakumoto - FEMA** **Will Thomas - Baker** **Jon Walters - Nolte** ***Dan Schaaf* - Nolte** **Scott Lyle - Nolte** **Paul Grosjean - Nolte**	**DATE:**	**November 4, 1996**
SUBJECT:	**WACCO MTG**	**PROJ #:**	**SD0338/SD0339**

1. Cad files to be submitted in .dwg and .dxf format.
2. Submit all files on CD-ROM.
3. Use 4 places on accuracy for polygons.
4. USGS Optional 3 .dlg format for Baker files
    - Overlay County files with FEMA/Baker files
        - Check community boundaries
        - Street boundaries
    - Use correct boundaries (either FEMA's or County's)
5. Baker files - Projected to UTM zones.
6. Different projections (UTM, state plane, etc.) are acceptable to Baker as long as they know which we are using.
7. Layering convention - Baker uses Option 2 (more compressed than Option 1).
    - Provide more layers (easier to combine than separate layers).
    - Encoding is a Baker process (not required of Nolte).
8. Use descriptive layers and Nolte tools
9. Denny Watkins to provide Nolte with Washoe and Clark DFIRMs on CD's (.dlg format).
    - DFIRMs in UTM
    - Denny to provide additional list of layer conventions for miscellaneous features such as buildings, etc.
10. We can use Nolte layering scheme for photogrammetrist.
    - Provide Baker with appropriate documentation.
11. Nolte will submit 10% files for Washoe and Clark.
    - Submitting separately is ok with Bakers schedule.
    - Baker will review within one week of receipt.
12. Nevada state plane coordinates are required by Les for submittal.
13. Send Paul Xerox copies of stream locations.
    - E-mail Paul Cooper Aerial name and address.
    - Send Paul glossary of terms.

MEETING MINUTES

ATTENDEES:	**Les Sakumoto - FEMA** **Curt Chandler - City of Henderson** **Steve Parrish - Clark County** **Kevin Eubanks - Clark County RFCD** **Jon Walters - Nolte** **Dan Schaaf - Nolte** **Scott Lyle - Nolte**	**DATE:**	**November 2, 1995**
SUBJECT:	**Clark County Time and Cost Meeting**	**PROJ #:**	**SD0339**

1. Clark County FCD has copies of hydrology information.
2. Study limits are from Charleston Blvd to Lake Las Vegas (~11 miles).
3. For tributaries, just match backwater.
4. Multiple profiles (10-, 50-, 100-, and 500-year) and floodway required.
5. City of Henderson limits begin south of Boyd Stadium along Las Vegas Wash.
6. Topography at NGVD 29. County datum has been converted - be careful with datum! Contact Brett Lane, County Surveyor.
7. Phu Simpson is Clark County contact for mapping (same phone no. as Steve Parrish). Some topo produced for Las Vegas Wetlands Park project.
8. Digital mapping available through GIZMO (County agency). GIZMO has street centerline data and many other layers. Kevin Graczyk is GIZMO contact. Robert Garza is Clark County RFCD GIS contact.
9. Check with water district and sewer district (Jim Devlin) for available base mapping. Clark County, RFCD, and City of Henderson don't have any topographic mapping available.
10. Nolte will review Clark County FCD hydrology. Check to make sure that hydrology represents constructed detention facilities.
11. Coordinate with Ensign & Buckley re: upstream tie-in for Las Vegas Wash at Charleston Blvd.
12. Map BFE's up each tributary to match studies. Need to obtain topographic data (include in photogrammetric work) for each tributary stub.
13. Northwest Hydraulics will verify hydrology to freeway. Nolte will verify hydrology downstream of freeway.
14. 6-hour summer storms ~ 3.0 inches. Clark County FCD uses multiplication factors to determine different frequencies based on NOAA Atlas precipitation data.
15. John James is State Climatologist. NOAA's new precipitation amounts are low.
16. Range Wash (Sloan Channel) - include several hundred feet in study.
17. Las Vegas Wash flow travels under Lake Las Vegas through underground pipes. LOMR will be used to establish starting wsel at Lake Las Vegas (per Curt of City of Henderson).
18. Clark County FCD has June 1995 aerial photos. These will be digitally rectified in early 1996.
19. Digital ortho required for contract. Pick up culture and use FIRMs to estimate widths. Nevada tick marks should be shown on each work map.
20. C-1 Channel inflow needs to be considered - future A-E work.
21. Photogrammetry firms : Geonics (Northwest Hydraulics using, out of Sacramento), Cooper Aerial, Nevada Aerial & Mapping, Kenny
22. Survey firms : ESI
23. Don't need 2X enlargements. Make two sets of aerials. For proposal, mark-up USGS maps with study limits for Les and for FEMA contracts personnel.
24. Les on vacation from November 13 through December 2.

Jeff:

I'll give you a call on this. I would prefer to stick with a solution that makes the most hydraulic sense, unless an argument can be made on why it would cause some problems in administering the floodway.

Let's discuss the if, ands, or buts.

Les

Scott:

Talked it over with Pernille, she concurrs with my suggestion that you run both the 100 and 500 but we will only show the 100 on the final maps and keep the 500 for another day.

That being said and done, the question is how to show the 500? I would say just do your best to show something reasonable at Charleston. Make your assumptions as to the most likely flow distribution, document it, and go for it. Perhaps the flow distribution from the E&B study upstream will indicate the best paths.

Les

P.S. Baker is putting together the info for Alamitos now.

Subject: Las Vegas Wash

Pernille,
We spoke a few months ago about mapping the floodplain and floodway at the confluence of Las Vegas Wash and Duck Creek. You suggested mapping the higher of the two water surfaces while showing both lines for the tec review process. We are having a problem with this because the higher water surface bounces between the two models as you move to the confluence. Picking the higher as you move down would not result in a smooth line.

One option is to shade the worst case from both while showing the interior lines. If this is done we would need to resolve how to layout the BFE's.

Let me know what you suggest.

I attached a PDF file for you to review.

Subject: WACCO Billings

I just got off the phone with Les Sakumoto of FEMA (job numbers SD0338 and SD0339). Les is going to be in San Diego for a meeting on December 17 to discuss WACCO project. He recommended we have invoices mailed directly to Nolte San Diego office (instead of FEMA office) and then he could sign off on them right away. Les said he's going to be out in the field for awhile, so invoices would sit around for another month if sent to his office.

Can we make this happen?

Thanks!

Scott

TELEPHONE CONVERSATION RECORD

TO: **Jeff Daniel** **DATE:** **October 23, 1998**

FROM: **Pernille Buch Pederson** **PROJ #:** **SD0339**

SUBJECT: **Floodway starting conditions**

Pernille called after reviewing my fax detailing our starting conditions for Las Vegas Wash (LV) floodway at the confluence with Duck Creek.
Permille agreed that we should start the LV floodway profile at the optimized water surface elevation of the Duck Creek model. This makes the floodways come together at cross section 308 and makes the most hydraulic sense.

Sent: Tuesday, September 29, 1998 3:29 PM
To: 'lsaku@mindspring.com'
Cc: Walters, Jon H; Daniel, Jeff G
Subject: WACCO - Las Vegas Wash

I talked with Pernille Buch-Pedersen of Baker Engineers today regarding 500-year analyses and mapping for Las Vegas Wash. Pernille said that Ensign & Buckley (E&B) did **not** analyze or map 500-year event upstream of Charleston Boulevard.

If we are to analyze and map the 500-year floodplain through our study area, then we will need to know what the 500-year discharge is entering our reach. The most efficient and cost effective solution is to have E&B analyze the 500-year storm through their study reach and calculate 500-year in-channel and spill flows. Is it possible for FEMA to contract with Ensign & Buckley to perform these analyses?

Please let me know how you wish to proceed with these analyses.

NOTES

Robert -

We have reached a critical stage in our hydraulic analyses for Las Vegas Wash and need to incorporate the grading information for the new golf course. I still have not received this information to date. What can I do to expedite receipt of these plans?

I also have an additional request. Our study needs to tie in with the Duck Creek analyses performed by Nimbus Engineers. We are trying to match their water surface profile at Rebel Drive. Do you have improvement plans for Rebel Drive at Duck Creek Wash crossing (just north of Boyd Stadium)?

Thanks for your help.

MEMORANDUM

TO: **Jim Denney**
Cathy Hendrickx

DATE: **June 22, 1998**

FROM: **Scott Lyle**

PROJ #: **SD0339**

SUBJECT: **NV FIS Surveys and Photogrammetry**

Here is a reminder on how we would like the Las Vegas Wash HEC-2 data prepared. Please provide all cross section data in *HEC-2* digital format as described below:

Cross section data should be entered in *HEC-2* format (X1 and GR cards), with data beginning from the left end of the cross sections when looking downstream.

Channel flow lines (the lowest point) should correspond to station 5000.

Cross sections at road crossings should be taken at both the downstream and the upstream face of the bridge/culvert, but should reflect the **channel and ground elevations** adjacent to the bridge/culvert. (**Note:** Las Vegas Wash cross sections 399 & 400, 439 & 440, 469 & 470, 479 & 480 are located at the downstream and upstream faces of bridges. These sections should represent the channel ground configuration at the bridge faces, **not** the top of the road.

Please provide endpoint coordinate values for the portions of Las Vegas Wash cross sections which are obscured by vegetation. Our survey crews will use these coordinates to determine the cross section locations in the field and to identify the match points between field and photogrammetric data.

Please use the digital drawing we sent you (dated 5/22/98) to locate cross sections.

As we will be starting work immediately upon receipt of your data, please keep Jon Walters or me informed regarding the progress of your work. Please also let us know if you have any questions regarding our needs. We want to help you finish your work as accurately and efficiently as possible.

We will work closely with you to assure timely completion of your work in a way that meets FEMA's requirements. Thank you for your commitment to this project.

Subject: WACCO Text Files

Diana Bradley, FEMA librarian at Baker Engineers, said there were no digital text files for Washoe County or Clark County study areas. Text produced for these study areas have been pieced together over the years using different formats.

Looks like we'll be typing this stuff in from scratch.

Subject: Nevada FIS - Photogrammetry

Hi Les -- I've spoken with a number of Study and photogrammetric contractors, met with Cooper and our survey staff, and discussed the Guidelines with John Lesko at Baker. I clearly understand your desire to have accurate cross-section data, especially at key hydraulic control points. Here's what I recommend to complete our Nevada studies...

We will use Cooper's 4-foot contour topo and digitized cross-sections for the Reno and Las Vegas Wash study areas, supplemented with field obtained cross-sections as follows:

- Las Vegas Wash - approximately one-third of the study reach is obscured by vegetation. Field cross sections will be obtained for these areas to complete the digitized photogrammetric cross-sections. Additional field cross sections will be taken along Telephone Line Road, and at paved "Arizona" type crossings. These data will be supplemented with "As-built" information for crossings at Charleston, Nellis, Sahara and Vegas Valley Drive, and Lake Las Vegas, as well as plans for the concrete-lined portions of Las Vegas Wash Channel.
- Virginia Foothills - we will take a field cross section along Mira Loma Road
- Hidden Valley - we will take field cross sections along the centerline of most of the paved streets in the study area, along the top of the levee, at the top of the detention basin and at three key channel locations.
- Golden Valley - along the centerline of 6 paved roads throughout the study area, and at 6 key locations along the channel.
- Sun Valley - along the top of the dam and spillway, at 8 key locations along the channel, and along the centerline of 8 streets throughout the study area.

The vertical accuracy of field cross section data, taken from paved surfaces, will be +/- 0.25 feet.

I believe that this is the best course of action for completing this study within budget. You may have confidence that the resulting topographic data are better than or equal to all adjacent study areas, with the possible exception of Duck Creek which, we were told, was mapped with a contour interval of 2-feet.

Please let me know if you have any questions and if you agree with my recommendations. I would like to send our survey crews out this month and authorize Cooper to complete the remaining digitization, so please let me know what you think as soon as you can.

Thank you!

Jon

Subject: WACCO - Las Vegas Wash

I performed very preliminary HEC-2 analyses for Las Vegas Wash from the WWTP access road to Charleston Boulevard (the upper 3 miles of the wash). The preliminary results show that the 100-year flood of 6700 cfs will be contained in the channel from Sahara Avenue upstream to Charleston Boulevard.

These results indicate that there probably will not be spill analyses performed for this reach of the wash.

Please give me a call, or email me, if you have any questions.

Lake Las Vegas hydraulic analysis.

Water surface elevation in the lake is maintained at 1403.
The bypass pipes carry less than the 10-year event (rated capacity at 1760 cfs).
Available storage in lake will contain 10-year event without spillage.
Montgomery performed hydraulic analyses for 10- and 25-year events.
For FEMA study, assume critical depth over road crossing at upstream end.

Tom:

Need to run some items thru you on the Las Vegas Wash Restudy that Nolte is doing. It's only 11 miles and it's the last piece of Las Vegas Wash. Charleston to Lake Las Vegas. Because it's the last piece, I requested Nolte to make sure that it's using the 1929 datum. We are having a hard time trying to get some type of uniform adjusted between the 1929 and 1988. The County surveyor is adament about using the 1988 and will not help us in getting the best set of usable benchmarks. We think we have a a workable set of benches to use that will bring the survey in within our specs but want to run this by your crew before we get too far into the map manuscript. Let me know when we can have a conference call on this. I can send you a description of the problem and our solution before hand.

Thanks.....Les

MEMORANDUM

TO: **Jon Walters** **DATE:** **March 13, 1997**

FROM: **Ronald Parker** **PROJ #:** **SD0339 LS**

SUBJECT: ***Las Vegas Wash Benchmarks***

The Benchmark (BMs) that were used to control the aerial topographic survey for the Las Vegas Wash were the City of Las Vegas BM 6C02 33SWS, Clark County BMs 6C12 95SWS, 6C12 16SWS, 6C12 28NE6 and 6C12 35NWW6 and the U.S. Department of Interior Benchmarks 8HLS and 9HLS.

The City of Las Vegas publishes their vertical datum in both NGVD 29 and NAVD 88. Clark County publishes only NAVD 88 datum and will not provide NGVD 29. The U.S. Department of Interior provided us with NGVD 29 Elevations. NAVD 88 elevation were obtained from the National Geodetic Survey Computer Program "Vertcon."

Nimbus Engineers, who are doing the Duck Creek Survey used Clark County's Benchmark V-51 that has a published elevation in NAVD 88 as shown in their vertical control book dated 1992. Nimbus Engineers sent me a copy of a page from a 1988 Clark County vertical control book that has NGVD 29 datum on V-51. This also provided us with 29 datum on 6C12 35NWW6.

The general location of the Benchmarks with both datum's as they relate to our survey, with their respective vertical values and the difference between the values are as follows.

BM	LOCATION	NGVD 29	NAVD 88	DIFF.
6C02 33SWS	Located at the north end of the survey at the intersection of Nellis and Charleston.	1739.619	1742.102	2.483
6C12 35NWW6	Located approximately at the mid point of our survey on Hollywood blvd. 0.2 mile South of Russell Road.	1637.430	1639.774	2.344
V-51	Located approximately at the mid point of our survey on Boulder Hwy South of Hamilton Ave.	1653.781	1656.132	2.351
BM	LOCATION	NGVD 29	NAVD 88	DIFF
8HLS	Located near Eastern end of our survey on Lake Mead Drive near the entrance road to Lake Las Vegas.	1715.630	1717.919	2.289

9HLS	Located at Eastern end of our survey on Lake Mead Drive Approximately 1.5 miles West of 8HLS.	1695.153	1697.438	2.285

Elevations were established on our vertical control points by a combination of differential leveling using a wild NA 2000 automatic level and differential GPS techniques using static positioning procedures. The NA 2000 is a first order level.

It is my opinion that by using the mean of the difference of the five Benchmarks with both 29 and 88 datum, of 2.350 feet, our survey will be within the vertical control accuracy for leveling the photogrammetric stereo models of $\pm$ 0.4 feet as stated on page A4-8 of FEMA's Appendix 4 Aerial Mapping and Specifications.

Scott Lyle, Nolte
Ron Parker, Nolte

SUBJECT

We are looking for the cleanest datum conversion from NAVD 88 to NGVD 29 for Las Vegas aerial work.
The majority of the panels in Clark County (including Las Vegas Wash) are on NGVD 29. The Nolte restudy will only update 5 (out of approximately 225) panels.
Jim D. - NGVD 29 benchmarks were last checked in 1988. These benchmarks are not maintained.
Jim D. - Clark County doesn't want to release NGVD 29 benchmark data. In their eyes, NGVD 29 doesn't exist anymore.
There is not a constant delta between NGVD 29 and NAVD 88 benchmark data. There has been subsidence of approximately 0.01 feet per month since 1988 for some locations.
Les S. - NGVD 29 will be used as the mapping datum on new FIRMs for Nolte study reach. NAVD 88 correction will be shown on these maps.
Subsidence has occurred with NAVD 88 benchmarks also. Alluvial fan possibly sinking due to groundwater pumping. NAVD 88 benchmarks in foothill bedrock are stable and used to check subsidence.

Nolte to apply one conversion through entire reach, if possible. Nolte to review Duck Creek surveys and check conversions against benchmarks located at the north and south ends of the study reach.
Nolte will write a memo of understanding to FEMA stating how conversion from NAVD 88 to NGVD 29 will affect FEMA specifications related to vertical accuracy.

Note: Based on research Nolte performed after this teleconference, it was determined that a conversion of -2.35 feet will be used to convert NAVD 88 datum to NGVD 29 datum.

Subject: RE: WACCO - Vertical Datum

FYI I spoke with Les Thurs night and told him this. He is hopeful that adjustment factor between '29 and '88 will be constant so we can adjust like Nimbus did on Duck Creek. He thought that Duck Ck study reach was 7 or 8 miles long.

From: Lyle, Scott
To: Walters, Jon
Cc: Schaaf, Dan
Subject: WACCO - Vertical Datum
Date: Thursday, February 27, 1997 11:19AM

In response to Les Sakumoto, here's a summary of vertical datums used for WACCO project and the implications in revising the datum.

NGVD 29 was used for Washoe County surveys.

NAVD 88 was used for Las Vegas Wash surveys. This vertical control was used for several reasons:
Las Vegas County benchmark data is at NAVD 88
NGVD 29 data could be tainted because of past subsidence

In Las Vegas, NAVD 88 is approximately 1.7' higher than NGVD 29 (varies from area to area). If we are to convert topo back to NGVD 29, the following tasks must be completed:
Surveyors have to resolve vertical differences between datums.
FEMA must accept accuracy limitation due to subsidence impact.
Photogrammetrist must redo almost the entire 11 mile reach.

I have a voice mail into Les to see what the next step is.

SUBJECT: Las Vegas Wash Hydrology

Dear Kevin:

This letter is to confirm our understanding of flood discharges to be used in our Flood Insurance Study analyses for Las Vegas Wash (FEMA Contract EMF-96-CO-0099). Our study reach extends from the Lake Las Vegas intake structure to Charleston Boulevard. Based on our previous conversations with you and FEMA, discharges published in the JMM report entitled "Las Vegas Valley Flood Insurance Study Hydrology Report", dated September 1991, are to be used for our study. These discharges are listed below.

Location	10-Year Peak Discharge (cfs)	50-Year Peak Discharge (cfs)	100-Year Peak Discharge (cfs)	500-Year Peak Discharge (cfs)
Upstream of Flamingo Wash	2,200	5,100	6,700	11,600
Downstream of Flamingo Wash	2,500	5,500	7,100	14,300
Downstream of Duck Creek	3,000	8,500	11,500	24,000

These values are consistent with the Las Vegas Wash/Range Wash LOMR prepared by G.C. Wallace, dated January 14, 1994. In addition, these discharges match the Flood Insurance Study prepared by Ensign & Buckley for Las Vegas Wash upstream of Charleston Boulevard (currently being reviewed by the FEMA TEC, Baker Engineers).

Please send a letter to us confirming these discharges. Your letter is required as part of the hydrologic verification in our submittal to FEMA. Please give me a call if you have any questions regarding these discharges.

Sincerely,
NOLTE and ASSOCIATES, Inc.

Subject: WACCO Research

Here's an update on research documents for Las Vegas Wash:
1. Called Dirck Van Gorp at Clark County Parks & Recreation. They have hard copy topographic mapping (dated early '95?) at 2' c.i. for reach from Vegas Valley Road to Lake Las Vegas intake structure. Dirck not sure if digital files available.

Dirck to fax us a "shared info" standard form letter . . . he wants us to check it out with our legal beagles.

2. Called Jeff Liston at JMM. They're sending us copies of plans for Lake Las Vegas intake structure.

ANNOUNCEMENT OF INTENT TO PERFORM FLOOD EVALUATION STUDY

The Federal Emergency Management Agency announced today that under authority of the National Flood Insurance Act of 1968 (P.L. 90-448), as amended, and the Flood Disaster Protection Act of 1973 (P.L. 93-234), it will fund a detailed study of the flood hazard areas along Las Vegas Wash from Charleston Boulevard to Lake Las Vegas in Clark County and the City of Henderson. The study will be performed for the Federal Emergency Management Agency by Nolte and Associates, Inc. The purpose of this study is to examine and evaluate the flood hazard areas in the community that are developed and are likely to be developed and to determine flood elevations for those areas. Flood elevations will be used by the community to carry out the floodplain management objectives of the National Flood Insurance Program. They will also be used as the basis for determining the appropriate flood insurance premium rates for buildings for their contents.

This announcement is intended to notify all interested persons of the commencement of this study so that they may have an opportunity to bring any relevant facts and technical data concerning local flood hazards to the attention of the Federal Emergency Management Agency for consideration in the course of this study. Such information should be furnished to Scott Lyle, Nolte and Associates, Inc., 5469 Kearny Villa Road, Suite 304, San Diego, CA 92123.

Las Vegas Valley Flood Insurance Study Hydrology Report

September 1991

James M. Montgomery

CHAPTER 10

LOWER LAS VEGAS WASH FIS HYDROLOGY

INTRODUCTION

This chapter summarizes the existing conditions/existing facilities analysis of Lower Las Vegas Wash conducted for the new FIS Hydrology study for Las Vegas Valley. The purpose of the analysis was to develop acceptable discharges for use in future Flood Insurance Studies for Lower Las Vegas Wash. In addition, results could be used to assess the adequacy of existing facilities to handle existing conditions flood discharges. For purposes of this study, Lower Las Vegas Wash is defined as the main Las Vegas Wash Channel from the Pecos/Lake Mead bridge crossing in North Las Vegas downstream to the Lake Las Vegas intake structure.

The key previous hydrologic analysis of Lower Las Vegas Wash is the Corps of Engineers Special Flood Hazard Study. This study presents existing conditions, computed probability discharges for Lower Las Vegas Wash based on conditions at the time of the analysis (1988). Other previous studies include the CCRFCD Master Plan (1986) and the Clark County Flood Insurance Restudy (1985), both prepared by JMM. The COE study utilized information from each of these analyses. There are no recent feasibility or preliminary design level studies for Lower Las Vegas Wash.

METHOD OF ANALYSIS

The Lower Las Vegas Wash drainage area varies from 735 square miles at Pecos/Lake Mead to 1460 square miles at Telephone Line Road.

Inflows to the study reach consist of six major tributary confluences, and minor local tributary drainages. The major confluences are:

Las Vegas Creek (Washington Ave. Channel)	27	square miles
Range Wash	151	square miles
Flamingo Wash	145	square miles
Duck Creek	234*	square miles
Pittman Wash	118	square miles
C-1 Channel	39	square miles

*Including total Upper Blue Diamond watershed

Due to the large drainage area of Las Vegas Wash compared to the typical storm area of about 200 square miles, previous studies have estimated peak flows in Lower Las Vegas Wash based on the peak inflows from the various major tributaries. Past analyses by JMM and COE found that a general storm covering the entire drainage area would not generate critical peak discharges. The selected approach has been to begin at the upstream end of the study reach and move downstream, adopting the largest peak tributary inflows as Las Vegas Wash peak flows. This approach is conservative in that it does not account for channel routing effects in the Las Vegas Wash floodplain. In addition it does not consider the possibility of concurrent 100-year storms over more than one major tributary; an occurrence of an event of this type would have a return period exceeding 100 years.

Although there are no recent or pending improvements on Lower Las Vegas Wash which would affect peak discharges, the recommended approach accounts for facilities constructed or proposed for construction on each of the major tributaries. Facilities thus incorporated into the "existing conditions" analysis include:

West Range Wash Diversion Dike
North Las Vegas Detention Basin Modifications
Upper Las Vegas Wash Detention Basin and Collection Dike
Gowan Detention Basin and Outfall
Angel Park Detention Basin Modifications
Cheyenne Channel, Buffalo Channel, and Hualpai Diversion
Upper Flamingo Detention Basin

SUMMARY OF RESULTS

Table 10-1 and Figure 10-1 present a summary of existing conditions peak discharges for Lower Las Vegas Wash. Table 10-1 also shows currently adopted regulatory discharges based on the COE Special Flood Hazard Study. It is seen that the FIS Hydrology flows are all significantly lower than the COE flows. This is attributed to the major future detention facilities assumed in the FIS analysis which reduce the peak flows tributary to Las Vegas Wash at most key inflow points. These detention facilities also invalidate flows based on the COE regional regression equations, which do not account for regulation in the tributary watershed. As a result, the FIS Hydrology flows are recommended for use in future FIS studies.

Table 10-2 presents recommended FIS discharges for 10-, 50-, 100-, and 500-year return periods. FIS flows for all recurrence intervals were taken from model results or adopted flows for the major tributaries to Las Vegas Wash, as summarized in Figure 10-1. Although there is excellent agreement between the COE computed probability flows (regulatory discharges) and the FIS flows for the 10-year event, differences become progressively larger for the more severe events. In all cases the FIS flows have been selected as the adopted flows because they account for existing and pending flood control improvements.

COMPARISON OF EXISTING CONDITION 100-YEAR DISCHARGES FOR LOWER LAS VEGAS WASH FIS HYDROLOGY

Notes:

General: FIS flows based on largest of upstream tributary inflows to Las Vegas Wash.
FIS flows include effects of pending flood control projects on all tributaries (Upper Las Vegas Wash Detention Basin, West Range Wash Diversion, Gowan Detention Basin, Angel Park Outfall, Upper Flamingo Detention Basin).

1. FIS flow from Northern Las Vegas Wash/Western Tributary drainage area.
2. FIS flow from Flamingo/Tropicana drainage area.
3. FIS flow from Duck/Blue Diamond drainage area.
4. COE flow from Northern Las Vegas Wash

FLOOD INSURANCE STUDY

STREAM NAME	DESCRIPTION	FILE NAME	ID NO.
Las Vegas Wash	*Split flow description U/S of Sahara*	2Ba6 CID32003	Pg. 2
Las Vegas Wash	Normal depth calculations for mapping	2Ba6 CID32003	Pg. 3-4

Split Flow Description

A split flow occurs on the left bank of Las Vegas Wash just upstream of Sahara Avenue. The split is located between cross sections 441 and 442 and is included in the HEC-2 model LV.DAT.

The split is caused by a depression 200 feet wide at an elevation of 1,720 feet on the left bank between a residential development and the Sahara Avenue Bridge. The HEC-2 split flow option computed the split discharge to be 488 cfs. with a flow depth of 0.8 feet. The normal depth control was used for this calculation.

Based on our field reconnaissance, this split flow will travel easterly and discharge into Range Wash just north of its confluence with Las Vegas Wash. The flow is contained in a slight depression and maintains a width from 200 to 300 feet (see sheet C4). Normal depth calculations show that flow depths will range from 0.5 to 1.0 feet, therefore, this area should be mapped as Zone A0 (1-foot depth).

Development Division
401 South Fourth Street
Las Vegas, Nevada 89101

IN REPLY REFER TO:
Case No.: 92-09-131G
Map Panel Affected: 1250 B

T-218-65-RS

Dear Ms. Pearson:

This is in reference to a letter dated May 22, 1992, from Mr. Steven J. Jackson of C. C. Wallace, Inc., requesting that the Federal Emergency Management Agency (FEMA) determine whether the following property is located in a Special Flood Hazard Area (SFHA), an area that would be inundated by the 100-year (1-percent annual chance) flood. This property has been elevated by the placement of fill.

Property Description: Lots 85 through 90, Block 7, and Lots 21 through 38, Block 11, Collage II, Phase I, as shown on the Plat Map recorded as Instrument No. 00685, Official Records Book No. 911205, in Book 51, Page 33, in the Office of the Recorder, Clark County, Nevada

Community: Clark County

State: Nevada

On June 1, 1992, we received all information necessary to process Mr. Jackson's request. After comparing this information with the National Flood Insurance Program (NFIP) map for your community, we determined that although portions of the lots would be inundated by a 100-year flood, the existing structures on these lots would not be inundated. Therefore, this letter revises the map for Clark County, Nevada (NFIP Map Number 320003, Panel 1250 B, dated September 29, 1989), removing the above-mentioned structures from the SFHA. Because portions of the lots are in the SFHA, any future construction or substantial improvement on these lots remains subject to Federal, State, and local regulations for floodplain management.

Please note that these lots could be inundated by a flood greater than a 100-year flood or by local flooding conditions not shown on the NFIP map. Flood insurance is available at reduced cost for properties located outside the SFHA. Also, although we have based our determination on the flood information presently available, flood conditions may change or new information may be generated that could supersede this determination.

This Letter of Map Revision (LOMR) will not be printed and distributed to primary map users such as local insurance agents and mortgage lenders; therefore, the community will serve as a repository for these new data.

A copy of this LOMR is being sent to your community's official NFIP map repository where, in accordance with regulations adopted by your community when it made application to join the NFIP, it should be attached to the community's official record copy of the NFIP map which is available for public inspection.

We encourage you to disseminate the information reflected by this LOMR widely throughout the community in order that interested persons such as property owners, insurance agents, and mortgage lenders may benefit from this information. We also encourage you to consider preparing an article for publication in the community's local newspaper that would describe the changes that have been made and the assistance the community should provide in serving as a clearinghouse for these data and interpreting NFIP maps.

In order to ensure continued eligibility to participate in the NFIP, your community must enforce its floodplain management regulations using, at a minimum, the flood elevations and zone designations shown on your community's NFIP map, including the revisions effected by this letter. This response to your request is based on the minimum criteria established by the NFIP. State and community officials, based on knowledge of local conditions and in the interest of public safety, may set higher standards for construction in the floodplain. If the State of Nevada or your community have adopted more restrictive or comprehensive floodplain management criteria, these criteria take precedence over the minimum Federal criteria.

This revision has been made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 92-234) and is in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448) 42 U.S.C. 4001-4128, and 44 CFR Part 65.

This revision is effective as of the date of this letter. However, a request for reconsideration may be made within 30 days. Any requests for reconsideration must be based on scientific or technical data.

Please note that FEMA is currently developing detailed application and certification forms for use in requesting revisions or amendments to NFIP maps. Forms will be available this summer and will be used for requests received by FEMA on or after October 1, 1992. These forms will highlight technical considerations in a fashion that facilitates an efficient review; therefore, use of these forms prior to October 1 is strongly recommended. Application forms should be available after July 1 for Letter of Map Amendment and LOMR Based on Fill requests, and after September 1 for the more common types of revision requests.

In the near future, we plan to conduct a restudy of the flood hazards in the Las Vegas Valley area and are now working with the Clark County Regional Flood Control District to obtain appropriate peak discharge values for use in the restudy. Therefore, our restudy may be based on discharge values other than those used in the hydraulic analysis for this project.

If you have any questions or if we can be of further assistance, please call Ms. Cecelia Lynch at (202) 646-2747.

Sincerely,

Jack F. Flowers for

Pay L. Davis, Acting Chief
Technical Operations Division

IN REPLY REFER TO:
Case No.: 93-09-773A
Community: Clark County, Nevada
Community No.: 320003
Map Panel Affected: 1250 B

I-216-65-ES

Dear Ms. Pearson:

This is in response to a letter dated September 2, 1993, from Mr. Steven Jackson, G. C. Wallace, Inc., requesting that the Federal Emergency Management Agency determine whether the following property is located in a Special Flood Hazard Area (SFHA), an area that would be inundated by the 100-year (1-percent annual chance) flood. This property has been elevated by the placement of fill.

Property Description: Lots 95 through 100, Block 7, Collage II-Phase [illegible] as shown on the Plat Map recorded as Book 51, Page 33, in the Office of the Recorder, Clark County, Nevada

Community: Clark County

[illegible] Agency

All fees necessary to process this Letter of Map Revision (LOMR), a total of $200, have been received.

On September 8, 1993, we received all information necessary to process Mr. Jackson's request. After comparing this information to the National Flood Insurance Program (NFIP) map for your community, we have determined that although portions of the property described above would be inundated by a 100-year flood, the existing structures on the property would not be inundated. Therefore, this letter revises the map for Clark County, Nevada (NFIP Map [illegible], Panel 1250 B, dated September 29, 1989), to remove the structures from the SFHA. The structures are now in Zone X (unshaded), an area consisting of land lying outside the 500-year floodplain. Because portions of the property are in the SFHA, any future construction or substantial improvement on the property remains subject to Federal, State, and local requirements for floodplain management.

You should be aware that this property could be inundated by a flood greater than the 100-year flood or by local flooding conditions not shown on the NFIP map. Also, although we have based our determination on the information presently available, we are currently revising the National Flood Insurance Program (NFIP) maps for Clark County, Nevada. New flood data could be generated that

may affect this property. When the new NFIP maps are issued, they will supersede this letter. The Federal requirement for purchasing flood insurance will then be based on the newly issued NFIP maps.

Please be advised that the NFIP offers a policy designed for one- to four-family homes in areas which are not designated as Special Flood Hazard Areas, but where flood exposure still represents a significant risk. This policy is the Preferred Risk Policy. It is a comprehensive policy that is available to property owners in B, C, and X zones only. Information about the Preferred Risk Policy and how one can qualify is enclosed.

To ensure continued eligibility to participate in the NFIP, your community must enforce its floodplain management regulations using, at a minimum, the flood elevations and zone designations shown on the NFIP map for your community, including the revision effected by this letter. This response is based on the minimum criteria established by the NFIP. State and community officials, based on knowledge of local conditions and in the interest of public safety, may set higher standards for construction in the floodplain. If the State of Nevada or your community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum Federal criteria.

This revision has been made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and is in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448) 42 U.S.C. 4001-4128, and 44 CFR Part 65.

This LOMR will not be printed and distributed to primary map users such as local insurance agents and mortgage lenders; therefore, your community will serve as a repository for these new data. We encourage you to disseminate the information reflected by this LOMR widely throughout your community in order that interested persons, such as property owners, insurance agents, and mortgage lenders, may benefit from this information. We also encourage you to consider preparing an article for publication in your community's local newspaper that would describe the changes that have been made and the assistance your community will provide in serving as a clearinghouse for these data and interpreting NFIP maps. When, in the future, a sufficient number of revisions have occurred on the affected panel(s), we will initiate a physical map revision to republish and distribute the panel(s) to incorporate the changes that were made effective by letter.

A copy of this LOMR is being sent to your community's official NFIP map repository where, in accordance with regulations adopted by your community when it made application to join the NFIP, it should be attached to the community's official record copy of the NFIP map, which is available for public inspection.

If you have any questions or if we can be of further assistance, please contact Ms. Cecelia Lynch at (202) 646-2747, or by facsimile at (202) 646-3445.

Sincerely,

Gil H. Jamieson, Chief
Technical Operations Division
Federal Insurance Administration

IN REPLY REFER TO:
T-218-65-E
Map Panel Affected: 1250 E

Dear Mr. Brandt:

This is in reference to a letter dated March 27, 1991, from Mr. Steven Jackson of G. C. Wallace, Inc., Las Vegas, Nevada, requesting that the Federal Emergency Management Agency determine whether the following property is located in a Special Flood Hazard Area (SFHA), an area that would be inundated by the 100-year (1-percent annual chance) flood. This property has been elevated by the placement of fill.

Property Description: Lots 40 through 61, Block 10, Phase 2, and Lots 3 through 20, Block 11, Phase 3, Collage Pacific Properties, Unit No. 2, previously known as Lots 40 through 61, Block 10, and Lots 3 through 20, Block 11, Unit 2, Pardee—Winterwood, respectively, as recorded in Book 23, Page 49, of Plats, Official Records Book 980, in the Office of the Recorder, Clark County, Nevada

Community: Clark County

State: Nevada

On April 9, 1991, we received all information necessary to process the request. After comparing this information with the National Flood Insurance Program (NFIP) map for Clark County, Nevada, we determined that although portions of the above-mentioned lots would be inundated by a 100-year flood, the existing structures on these lots would not be inundated. Therefore, this letter revises the map for Clark County, Nevada (NFIP Map Number 320003, Panel 1250 E, dated September 29, 1989), removing the above-mentioned structures from the SFHA. Because portions of the property are in the SFHA, any future construction or substantial improvement on this property remains subject to Federal, State, and local regulations for floodplain management. In accordance with our regulations, this letter must be attached to the copy of the NFIP map maintained in your files.

Please note that these lots could be inundated by a flood greater than a 100-year flood or by local flooding conditions not shown on the NFIP map. Flood insurance is available at reduced cost for properties located outside the SFHA. Also, although we have based our determination on the flood information presently available, flood conditions may change or new information may be generated that could supersede this determination.

This Letter of Map Revision (LOMR) will not be printed and distributed to primary map users such as local insurance agents and mortgage lenders; therefore, the community will serve as a repository for these new data. We encourage you to disseminate the information reflected by this LOMR widely throughout the community in order that interested persons such as property owners, insurance agents, and mortgage lenders may benefit from this information. We also encourage you to consider preparing an article for publication in the community's local newspaper that would describe the changes that have been made and the assistance the community will provide in serving as a clearinghouse for these data and interpreting NFIP maps.

In order to ensure continued eligibility to participate in the NFIP, your community must enforce its floodplain management regulations using, at a minimum, the flood elevations and zone designations shown on your community's NFIP map, including the revisions effected by this letter.

This revision has been made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 92-234) and is in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448) 42 U.S.C. 4001-4128, and 44 CFR Part 65.

This revision is effective as of the date of this letter. However, a request for reconsideration may be made within 30 days. Any requests for reconsideration must be based on scientific or technical data.

In the near future, we plan to conduct a restudy of the flood hazards in the Las Vegas Valley area and are now working with the Clark County Regional Flood Control District to obtain appropriate peak discharge values for use in the restudy. Therefore, our restudy may be based on discharge values other than those used in the hydraulic analysis for this project.

If you have any questions or if we can be of further assistance, please call us at (202) 646-2764.

NOTE:
THE NORTH LAS VEGAS DETENTION BASIN DIVERSION DIKE WEIR WAS OVERTOPPED BY THE 100 YEAR FLOW. THEREFORE, THE DIKE AND THE DETENTION BASIN WERE NOT INCLUDED IN THE ANALYSES FOR THE PURPOSE OF DETERMINING PEAK FLOWS DOWNSTREAM. THE 100 YEAR AND 500 YEAR FLOWS AT THIS POINT ARE 8536cfs AND 17,855cfs WITHOUT THE DIKE.

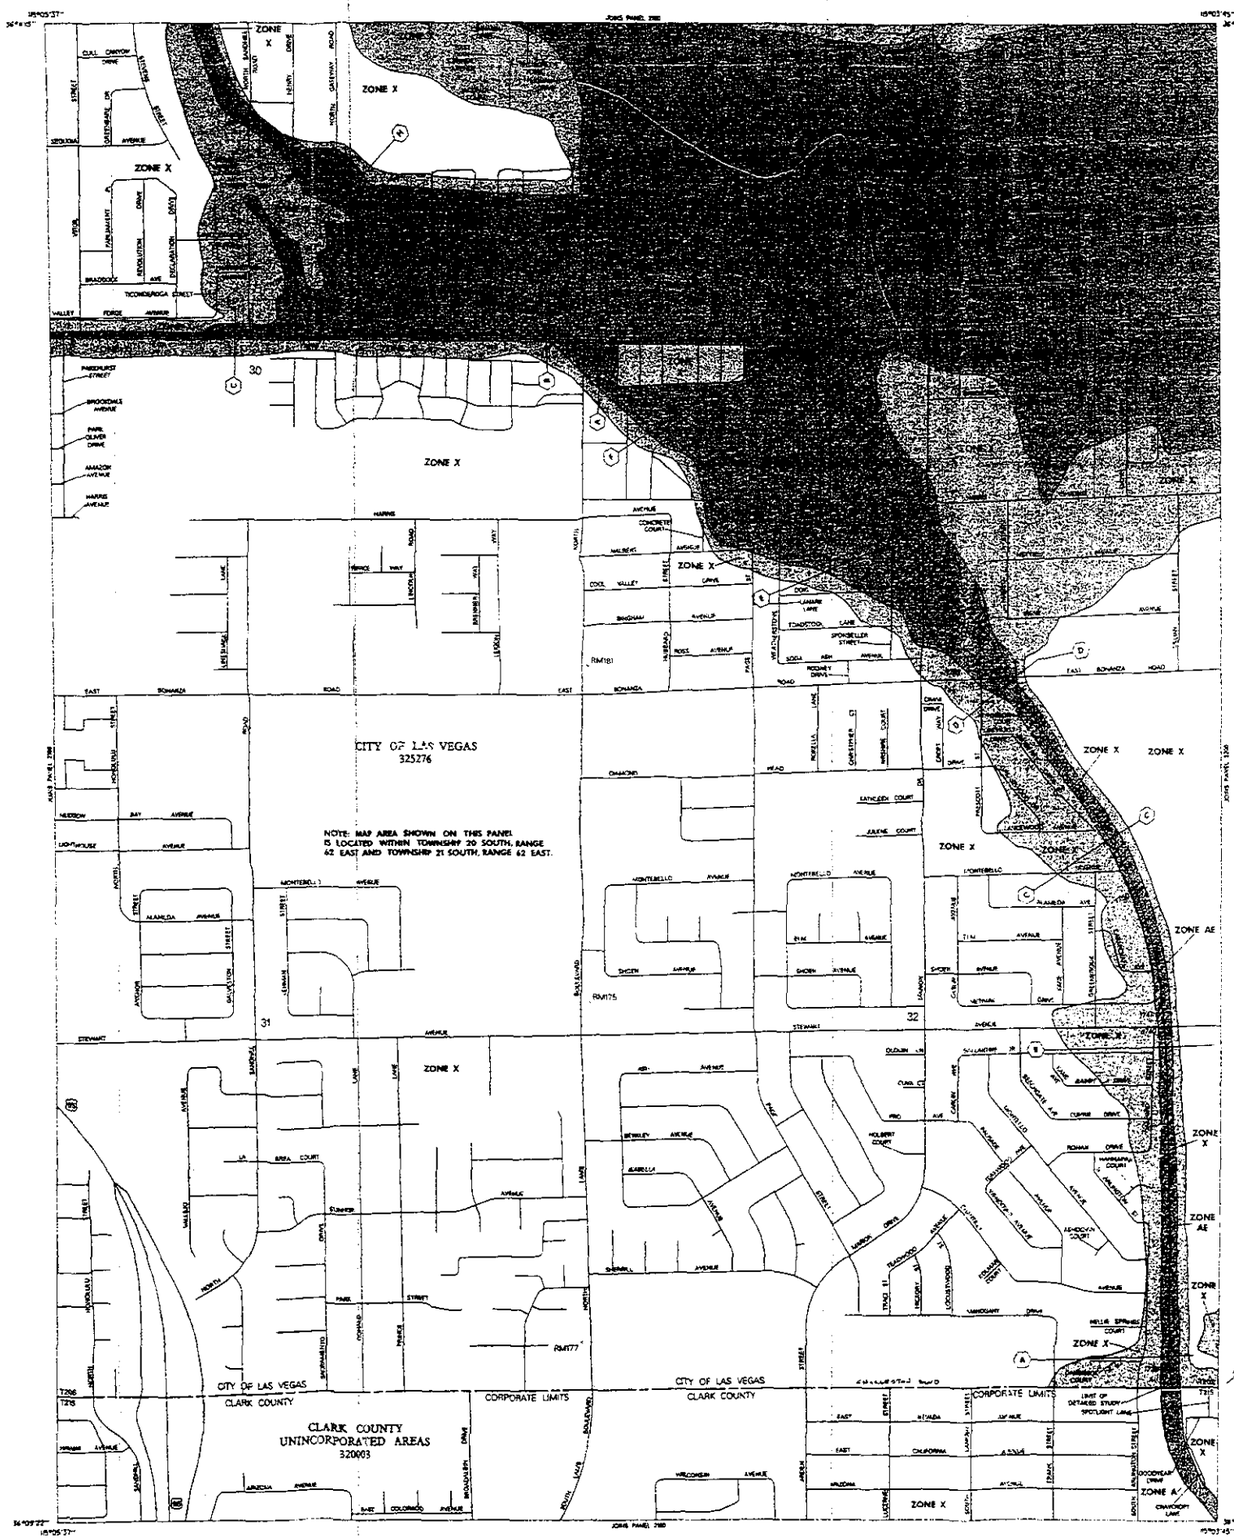
ELEVATION REFERENCE MARKS

REFERENCE MARK	ELEVATION (FEET NGVD)	DESCRIPTION OF LOCATION
RM174	1761.49	Township bench mark at the north edge of Lamb Boulevard, at the Three Corners Realty Manor. Established by Clark County Regional Planning Council.
RM175	1760.21	Intersection of East Stewart Avenue and Lamb Boulevard. At the intersection of East Stewart Avenue, and Lamb Boulevard. Established by Clark County Regional Planning Council.
RM177	1752.46	Northwest corner of intersection of Lamb and East Charleston Boulevard. Established by Clark County Regional Planning Council.
RM178	1792.81	Spike in curb at intersection of Bellagio, Havana, and Walnut Street. Established by Clark County Regional Planning Council.
RM179	1721.67	Spike located in Marion Drive, approximately 600 feet north of Meadowlark Avenue. Established by Clark County Regional Planning Council.
RM181	1772.05	Tailhead spike at the centerline of Lamb Boulevard and centerline of Shannon Road. Established by Clark County Regional Planning Council.



LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD

- ZONE A — No base flood elevations determined.
- ZONE AE — Base flood elevations determined.
- ZONE AH — Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
- ZONE AO — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AH — To be mapped from 100-year flood to natural flood protection against natural obstructions in the flood boundary determined.
- ZONE V — Coastal flood zone with velocity hazard (wave action); no base flood elevations determined.
- ZONE VE — Coastal flood zone with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

- ZONE X — Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.

OTHER AREAS

- ZONE X — Areas determined to be outside 500-year floodplain.
- ZONE D — Areas in which flood hazards are undetermined.

UNDEVELOPED COASTAL BARRIERS

Coastal flood zone and nomenclature within or proximate to Special Flood Hazard Areas.

- Flood Boundary
- Floodway Boundary
- Zone D Boundary
- Boundary Dividing Special Flood Hazard Areas, and Boundary Dividing Areas of Differing Special Flood Hazard Risks Within Special Flood Hazard Areas
- 513 — Base Flood Elevation Line; Elevation in Feet; Base Level Shown on Coastal Zones
- (D) — Limit of Study
- (1) 1871 — Base Flood Elevation in Feet Where Uniform Within Zone. See Map Index for Elevation Determinations
- RM7 — Flood Control Benchmark
- 97°07'30", 32°22'30" — Geographic Coordinates Based on North American Datum of 1927 (NAD 27)

NOTES

This Map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas.

Coastal base flood elevations shown on this map apply only landward of 0.0 NGVD and inland of the effective or approximate shoreline. Users should be aware that coastal flood elevations also may be provided in the Flood Insurance Study report for this jurisdiction; refer to it before developing.

Areas in Special Flood Hazard Zones A, AO, AH, AE, A99, V, and VE.

Certain areas not in Special Flood Hazard Zones may be protected by flood control structures.

Boundaries of the Floodways were computed at cross sections, and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to show to scale. Refer to the Flood Insurance Study report for this jurisdiction.

Elevations at which surface water is expected to be contained by levees conform to the requirements of 44 CFR 65.10.

For communities that maintain historic gages, to predetermine elevations see Section 6.0 of the Flood Insurance Study Report.

For shallow flooding (base depths) and base flood depths see elevations shown on this Map.

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas.

Coastal base flood elevations shown were determined using the VDATUM program developed by the National Oceanic and Atmospheric Administration (NOAA). For more information on the methodology used to develop these elevations, contact the Federal Insurance and Mitigation Administration (FIMA).

Areas of Special Flood Hazard include Zones A, AE, AH, AO, A99, V, and VE.

Coastal areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program.

Floodway widths in some areas may be too narrow to show to scale. Refer to the Flood Insurance Study Report.

The base flood elevations shown on this map apply only landward of Mean Lower Low Water (MLLW). Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the Flood Insurance Study Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal flood elevations are based on a 1.0 foot wave height. Areas of coastal flooding may be subject to wave heights greater than 1.0 foot during larger storms.

For information on flood insurance zones in your community, contact your insurance agent or call the National Flood Insurance Program at (800) 638-6620.

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all areas subject to flooding in Special Flood Hazard Areas.

Coastal base flood elevations apply only landward of 0.0 (NGVD) and include the effects of wave runup; base elevations may vary due to differences in local shore conditions for the National Insurance Exercise for locations landward of breaking.

Areas of Special Flood Hazard (100-year flood) include Zones A, AE, AH, AO, AR, V, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross-sections and interpolated between cross-sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in other areas may be less narrow or absent. Floodway widths are presented in the Flood Insurance Study Report.

This map uses monumentation stations (disturbility of Control Survey Research, Network Units, and the Oceanside Positioning System, established under the Coastal Zones Environment Act of 1982 (PL 97-348).

Elevations during storms are subject to all the rules of this map. This map depicts surface elevations exclusively; effects to foundations if protective walls have damaged subsequent to the formation of this map.

For corresponding flood hazards below, refer to corresponding drainage are Section 4.0 of the Flood Insurance Study Report.

For adjoining area panels, and data were source has consistently defined after them.

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas.

Coastal base flood elevations shown were determined at 0.5 NGVD and reflect the effects of wave action. These elevations may also differ from those shown elsewhere on this National Flood Insurance Program map.

Areas of Special Flood Hazard (100-year flood) include Zones A, AE, AH, AO, AR, V, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were determined at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. See Floodway Data table in the Flood Insurance Study report for this jurisdiction.

Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

This map was compiled from aerial photographs at Control Based Resource Section maps and the Orthophoto Procedure. Photo established under the Coastal Survey Improvement Act of 1988 (PL 100-4859).

Corporate limits shown are current as of the date of this map. The user should confirm corporate limits with the governing jurisdiction.

For communities with regulatory floodway, refer to Floodway Data table in the Flood Insurance Study report for this jurisdiction.

For adjoining map panels and base map indexes, see appropriate printed map index.

Nolte model: LV.DAT
Ensign & Buckley model: LVWASH2.DAT, HEC-2 model not dated

(a) The Nolte study is based on the James M. Montgomery Las Vegas Valley Flood Insurance Study Hydrology Report dated Sept. 1991.

(b) The Ensign & Buckley model should be started at Charleston Blvd with an elevation equal to one of the Nolte cross sections listed in the table above.

------NC and NH records Check------

------Transition Coefficient check------

SECNO:  510
NT TL 03  Contraction loss coefficient of  0.3  and expansion loss
          coefficient of  0.5  was used. However this cross section
          is not at a structure. Contraction loss coefficient of .1
          and expansion loss coefficient of .3 should be used.

------Roughness Coefficient Check at Structures------

-----Distance Check-----

----Channel Width Check----

SECNO: 202
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 206
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 216
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 218
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 238
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 242
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 250
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 252
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 272
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 274
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 278
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 286
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 294
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 306
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 500
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

SECNO: 510
XS CW 02 Channel width changes by a factor of two when compared to the the downstream cross section.

----Spacing Check----

XS SP 01 Change in HV > 0.5; (Kratio < 0.7 or Kratio > 1.4);
(DEPTH Ratio < 0.9 or DEPTH Ratio > 1.1);
(TOPWID Ratio < 0.5 or TOPWID Ratio > 2); and XLCH2 > 500 ft.
Additional cross sections may need to be added between 216 and 214

SECNO:	214	216	Diff.	Ratio
HV:	2.12	0.37	1.75	
.01K:	1333.8	3122.39		.43

DEPTH:	6.18	11.31	.55
TOPWID:	163.87	356.94	2.18
XLCH:		560	

XS SP 01 Change in HV > 0.5; (Kratio < 0.7 or Kratio > 1.4);
(DEPTH Ratio < 0.9 or DEPTH Ratio > 1.1);
(TOPWID Ratio < 0.5 or TOPWID Ratio > 2); and XLCH2 > 500 ft.
Additional cross sections may need to be added between 300 and 298

SECNO:	298	300	Diff.	Ratio
HV:	0.59	1.67	1.08	
.01K:	2414.41	1236.17		1.95
DEPTH:	9.11	10.4		.88
TOPWID:	570.01	176.82		.31
XLCH:		540		

----Ineffective Flow Area----

----Location Check----

----Discharge Check----

XS DC 02 Constant discharge used for the entire profile.

----Starting WSEL Check----

XS SW 05 Starting WSEL is computed from critical depth for the first profile.

---End Program---

Study Contractor: Nolte & Associates, Inc.

No.	DESCRIPTION	STATUS OK	STATUS NOK	STATUS N/A	COMMENTS
A.	INPUT DATA				
1	STARTING CONDITIONS				
	Type of Run Appropriate (Sub/Super)	✓			
	Starting Elevation Method	✓			[illegible]
	Flows consistent with backup data	✓			
	Manning's n- values	✓			
	Expansion & Contraction Coefficients		✓		[illegible]
	Match to Contiguous Studies				[illegible]
2	HYDRAULIC MODELING				
	Cross section location, #,& Orientation	✓			
	Distances between sections	✓			
	Changes in n-values appropriate	✓			
	All bridges/culverts modeled	✓			
	Check ineffective flow areas		✓		[illegible]
	Changes in CCHV & CEHV appropriate	✓			1 & 3
3	BRIDGE/CULVERT MODELING				
	Type of bridge routine	✓			
	Cross sections appropriate	✓			
	Changes in NC Card data appropriate		✓		[illegible]
	Ineffective flow areas check		✓		[illegible]
	Coding of Bridge Geometry		✓		[illegible]
	Skewness to flow considered	✓

------NC and NH records Check------

------Transition Coefficient check------

SECNO: 401
NT TL 02 This is section 4 of special bridge routine. Contraction and expansion loss coefficients are 0.1 and 0.3 respectively. They should be equal to 0.3 and 0.5.

SECNO: 398
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 432
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 438
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 460
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 468
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 474
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

SECNO: 478
NT TL 03 Contraction loss coefficient of 0.3 and expansion loss coefficient of 0.5 was used. However this cross section is not at a structure. Contraction loss coefficient of .1 and expansion loss coefficient of .3 should be used.

------Roughness Coefficient Check at Structures------

SECNO: 400
NT RS 01 This is section 2 of SB bridge routine. Channel n value is less than 0.025.

SECNO: 400.1
NT RS 01 This is section 3 of SB bridge routine. Channel n value is less than 0.025.

(COMMUNITY NAME, STATE)

FLOOD INSURANCE STUDY

STREAM NAME	DESCRIPTION	FILE NAME	ID NO.
Las Vegas Wash	Draft FIS Report	3 CID32003	002

10.2 Second Revision

This study was revised in January 1999, to incorporate the results of hydrologic and hydraulic analyses of Las Vegas Wash from Lake Las Vegas (City of Henderson Corporate Limits) to Charleston Boulevard (City of Las Vegas Corporate Limits). This work was performed by Nolte & Associates (the study contractor) for the Federal Emergency Management Agency (FEMA) under Contract No. EMF-96-CO-0099 and completed in January 1999.

Authority and Acknowledgements:

The hydrologic analyses for Las Vegas Wash were performed by James M. Montgomery Consulting Engineers, Inc. (JMM) and were included in the report entitled "Las Vegas Valley Flood Insurance Study Hydrology Report," September 1991. The hydraulic analyses for this study were performed by Nolte & Associates (Nolte).

Coordination:

An initial meeting was held on November 2, 1995, to review the scope of work and the streams to be studied. Representatives from Clark County Regional Flood Control District (CCRFCD), Clark County Public Works, City of Henderson, Nolte and FEMA attended this meeting.

Nolte & Associates contacted FEMA, USACE, the U.S. Geological Survey (USGS), the Nevada Department of Transportation, National Weather Service, National Resource Conservation Service (NRCS), Clark County Regional Flood Control District, and Clark County Department of Public Works to obtain any topographic, hydrologic, and hydraulic data which would pertain to the study area.

Community Description:

This study covers Las Vegas Wash from Lake Las Vegas to Charleston Boulevard, a distance of approximately 11 miles. The basin consists of commercial and residential areas on the upstream end. The mid-portion of the basin consists of open space and several wastewater treatment plants. Open space with some residential comprises the basin's downstream portion. There is an earthen trapezoidal channel extending from Charleston Boulevard downstream to Sahara Avenue, and a concrete trapezoidal channel from this point downstream to Vegas Valley Road. Downstream of this point the channel configuration varies from a small, low-flow type channel to a 50-foot vertical ravine-type channel. Vegetation is limited to desert shrubs downstream and earth/turf/concrete-lined channel upstream.

Hydrologic Analyses:

Peak discharge values for the 10-, 50-, 100-, and 500-year floods were obtained from the report entitled "Las Vegas Valley Flood Insurance Study Hydrology Report", dated September 1991. The flow events are treated independently and in locations where two washes combine the larger discharge is used. Peak discharges were determined in this study by use of the ACOE HEC-1 hydrologic model. These flows are accepted by Clark County Flood Control District and account for existing and pending flood control improvements including existing detention basins upstream of the study limit.

Hydraulic Analyses:

Aerial photogrammetry was used to develop topographic maps with 4-foot contour intervals. Channel cross section information was digitized from photogrammetric data and supplemented with field survey data where needed. This information was used to develop the hydraulic models for delineation of the 100-year floodplain. Hydraulic analyses were performed using the U.S Army Corps of Engineers HEC-2 Water Surface Profiles computer program Version 4.6.0, February 1991.

The hydraulic control at the downstream end of Las Vegas Wash is the concrete box culvert inlet structure of the existing Lake Las Vegas Stormwater Conveyance System. The Conveyance System is to transport the 100-year storm (11,500 cfs) under Lake Las Valley Parkway. The box culvert acts as a weir crest, therefore, critical depth was used as the starting water-surface elevation for hydraulic calculations (including Floodway run).

Channel roughness coefficients (Manning's "n") used in the hydraulic computations were determined by engineering judgement and field investigation, using the tables in Open Channel Hydraulics by Ven Te Chow.

Hydraulic computations for Las Vegas Wash included modeling of four bridge crossings. These occur at Charleston Boulevard, Nellis Boulevard, Sahara Avenue, and Vegas Valley Road. There are also two low flow road crossings located at Treatment Plant Road and Telephone Line Road. Existing culverts at these locations are undersized and convey less than ten percent of the 100-year peak flow. These culverts were assumed to be blocked for the hydraulic analyses.

Based on the topographic information, there appears to be split flow during the 100-year storm immediately upstream of Sahara Avenue. Based on our field reconnaissance, this split flow will travel easterly and discharge into Range Wash just north of its confluence with Las Vegas Wash. Normal depth calculations show that flow depths will range from 0.5 to 1.0 feet, therefore, this area is mapped as Zone A0 (1-foot depth).

Floodways for Las Vegas Wash were analyzed assuming that the flow split would be confined in the main channel for the floodway run. The encroached 100-year flood

elevations (with no flow split allowed) were compared to the unencroached 100-year flood elevations (with the flow split allowed) to make certain that the 1-foot surcharge was not exceeded.

Las Vegas Wash	BFE Description – Duck / LV Wash Conf.	4C CID32003	002

BFE Description for confluence of Duck Creek and Las Vegas Wash

The BFE's at the confluence of Duck Creek and Las Vegas Wash were developed as follows:

1. Both models were mapped including BFE's
   - LVDUCK.DAT Lake Las Vegas to Duck Creek, see pg 1 of file 4C CID32003 002
   - LV.DAT Duck Creek to Charleston Blvd., see pg 2 of file 4C CID32003 002
2. A line representing the equal water surface elevation between LV.DAT & LVDUCK.DAT was developed from Duck Creek (Rebel Rd.) to the downstream limit of LV.DAT (XS306).
   - CAD Layer "Prma_lv_lvduck_ae_combined", see pg 3 of file 4C CID32003 002
3. BFE's were plotted using the new line as an angle point between the two models.

CLARK COUNTY GENERAL NOTES

ALL CONSTRUCTION AND MATERIALS SHALL CONFORM TO THE "UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA," LATEST EDITION, THE "STANDARD DRAWINGS", DEPARTMENT OF PUBLIC WORKS, STANDARDS ISSUED BY THE CONTROLLING AGENCY, THE UNIFORM BUILDING CODE, AND ALL LOCAL COUNTY CODES AND ORDINANCES APPLICABLE.

ALL CONSTRUCTION SHALL BE AS SHOWN ON THESE PLANS. ANY REVISIONS SHALL HAVE THE PRIOR WRITTEN APPROVAL OF THE CONTROLLING AGENCY.

ALL WORK DONE WITHIN THE PUBLIC RIGHT-OF-WAY AND OUTSIDE OF THE PROJECT BOUNDARIES REQUIRES A SEPARATE ENCROACHMENT PERMIT ISSUED BY THE CLARK COUNTY DEPARTMENT OF PUBLIC WORKS. TRENCH AND PAVEMENT REPLACEMENT SHALL BE AS INDICATED.

THE CONTRACTOR SHALL FOLLOW THE GUIDELINES AND REGULATIONS AS SET FORTH IN O.S.H.A. BEFORE THE COMMENCEMENT WORK THE CONTRACTOR SHALL BE RESPONSIBLE FOR JOB SITE SAFETY PRECAUTIONS.

THE CONTRACTOR SHALL SECURE ALL THE PERMITS AND INSPECTIONS REQUIRED TO COMPLETE THE WORK SPECIFIED ON THESE PLANS.

THE CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES AT LEAST 48 HOURS PRIOR TO COMMENCE TO CONSTRUCTION. PHONE "CALL BEFORE YOU DIG" 1-800-227-2600. EXISTING UTILITIES ARE LOCATED ON THE PLANS FOR THE CONVENIENCE OF THE CONTRACTOR ONLY. THE CONTRACTOR SHALL HAVE FULL RESPONSIBILITY FOR THE PROTECTION OF EXISTING AND THE ENGINEER BEARS NO RESPONSIBILITY FOR UTILITIES NOT SHOWN ON THE PLANS OR NOT IN THE LOCATION SHOWN ON THE PLANS.

THE CONTRACTOR SHALL TAKE ALL PRECAUTIONARY METHODS NECESSARY TO PROTECT THE OWNER'S IMPROVEMENTS, WHICH ARE TO REMAIN IN PLACE, FROM DAMAGE. ANY EXISTING IMPROVEMENTS OR STRUCTURES DAMAGED BY THE CONTRACTOR'S OPERATIONS, SHALL BE REPAIRED OR RECONSTRUCTED TO THE REPAIR AND RECONSTRUCTION WORK SHALL BE AT THE EXPENSE OF THE CONTRACTOR AND APPROVED BY THE INSPECTOR.

THE CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSITIONS BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINAGE AS WELL AS FOR SMOOTH AND SAFE FLOW OF THE PROJECT SITE. THE EXTENT OF THE TRANSITIONS SHALL BE AS SHOWN HEREON THESE PLANS OR AS DESIGNATED IN THE FIELD BY THE INSPECTOR.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERTICAL ADJUSTMENT OF ALL EXISTING MANHOLES, CLEANOUTS, VALVE BOXES AND SIMILARITIES TO FINAL FINISH GRADE.

THE CONTRACTOR SHALL TAKE ALL PRECAUTIONS NECESSARY TO PROTECT EXISTING PERMANENT SURVEY MONUMENTS. ANY MONUMENTS DISTURBED SHALL BE REPLACED AND ADJUSTED PER APPLICABLE STANDARDS IN ACCORDANCE WITH N.R.S. SECTIONS 625.060-250.

ALL CONCRETE CONSTRUCTION SHALL USE TYPE "V" LOW ALKALI CEMENT.

THE EXACT LOCATION OF ALL SAWCUTS SHALL BE DETERMINED IN THE FIELD BY A CLARK COUNTY INSPECTOR.

CURB & GUTTER WITH A GRADE OF LESS THAN FOUR TENTHS OF ONE PERCENT SHALL BE WATER TESTED AS SOON AS POSSIBLE AFTER CONSTRUCTION. ANY CURB AND GUTTER FOUND TO BE UNACCEPTABLE TO CLARK COUNTY SHALL BE REMOVED AND REPLACED.

WHEELCHAIR RAMPS SHALL BE CONSTRUCTED IN EACH QUADRANT OF AN INTERSECTION PER STANDARD DRAWING 224. EXACT LOCATION OF THE RAMPS SHALL BE DETERMINED IN THE FIELD BY A CLARK COUNTY INSPECTOR.

ALL DIMENSIONS SHOWN ARE TO BACK OF CURB OR TO FACE OF BUILDING UNLESS OTHERWISE NOTED. ALL STATIONING IS ALONG THE CENTERLINE. ALL CURB AND GUTTER GRADES ARE FIGURED ON CENTERLINE STATIONING UNLESS OTHERWISE SHOWN.

FINAL ASPHALTIC CONCRETE (AC) PAVEMENT SURFACES, INCLUDING OPEN GRADE, SHALL BE ONE-HALF INCH ABOVE THE LIP OF THE GUTTER.

PRIVATE STREETS AND/OR DRIVEWAYS REFLECTED ON THESE PLANS ARE TO BE INSPECTED BY A CLARK COUNTY INSPECTOR.

GENERAL NOTES

1. DESIGN SPECIFICATIONS: AASHTO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES 1992 INTERIMS THROUGH 1983.
2. CONTRACT SPECIFICATIONS: PROJECT MANUAL TITLED "SPECIAL IMPROVEMENT DISTRICT NO. 94"
3. LIVE LOAD: STANDARD HS20-44 PLUS IMPACT LOAD. IMPACT MODIFIED AS APPLICABLE PER "AASHTO GUIDE SPECIFICATIONS FOR HORIZONTALLY CURVED HIGHWAY BRIDGES".
4. SEISMIC LOAD: ACCELLERATION COEFFICIENT 0.15G. ATC-6 RESPONSE SPECTRA WITH TYPE II SOIL.
5. FUTURE OVERLAY: 3" AT 150 pcf ASSUMED.
6. CONCRETE: ALL CONCRETE SHALL BE CLASS A MODIFIED (MAJOR). ONLY TYPE V CEMENT SHALL BE USED FOR CONCRETE IN CONTACT WITH SOIL. SEE PRESTRESSING NOTES AND CONCRETE CLASSIFICATIONS DIAGRAM FOR ULTIMATE COMPRESSIVE CONCRETE STRENGTHS, PLACEMENT LOCATIONS, AND SEQUENCE.
7. REINFORCING STEEL: ALL REINFORCING STEEL SHALL BE AASHTO M31 (ASTM A615) GRADE 60. DIMENSIONS RELATING TO BAR SPACING ARE CENTER TO CENTER. BENDING DIMENSIONS ARE FROM CUT TO OUT OF THE BARS. BAR SIZES THREE(3) TO NINE(9) ARE INDICATED BY THE FIRST DIGIT IN THE MARK. TEN(10) OR LARGER BY THE FIRST TWO DIGITS. THE LENGTH OF THE BAR SIZES FOUR(4) AND FIVE(5), WHEN CONSIDERED AS BARS TO CONTROL TEMPERATURE, SHRINKAGE AND DISTRIBUTION STRESSES BY THE BRIDGE ENGINEER, MAY BE ADJUSTED BY THE CONTRACTOR UPON CONCURRENCE AND APPROVAL OF THE BRIDGE ENGINEER.
8. CAMBER: THE CAMBER SHALL BE AS SHOWN ON THE PLANS.
9. FINE SURFACE FINISH: ALL EXPOSED CONCRETE SURFACES SHALL BE FINE SURFACE FINISHED. ALL SURFACES IN CONTACT WITH THE GROUND SHALL BE FINE SURFACE FINISHED TO A POINT 1'-6" BELOW THE FINISHED GROUND LINE. THE TYPE OF FINE SURFACE FINISH SHALL BE "BONDED GROUT FINISH". THE COLOR OF THE FINISH SHALL BE NATURAL CONCRETE GREY.
10. WALL SURFACE FINISH: ALL EXPOSED WALL PANELS SHALL BE FINE SURFACE FINISHED.
11. FOUNDATIONS: FOUNDATIONS FOR ABUTMENTS AND PIERS ARE SUPPORTED BY DRILLED SHAFTS. MAXIMUM ALLOWABLE BEARING PRESSURES USED ARE 3500 PSF AT SPREAD FOOTINGS FOR RETAINING WALLS.
12. INCIDENTAL ITEMS: ALL ITEMS SHOWN OR NOTED ON THE PLANS WHICH ARE NOT SPECIFICALLY BID ITEMS ARE CONSIDERED INCIDENTAL ITEMS. THE COST OF FURNISHING AND INSTALLING ALL SUCH ITEMS WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE INCLUDED IN THE UNIT PRICE BID FOR OTHER ITEMS, UNLESS NOTED OTHERWISE.
13. PLAN DIMENSIONS AND ELEVATIONS: ALL PLAN DIMENSIONS SHOWN ARE MEASURED HORIZONTALLY OR VERTICALLY UNLESS OTHERWISE NOTED AND REFLECT THE ULTIMATE GEOMETRIC SHAPE AND LOCATION OF ALL ELEMENTS AT A MEAN TEMPERATURE OF 70°F.
14. CONSTRUCTION TYPE CODE: X080
15. EXCAVATION AND BACKFILL: QUANTITIES ARE CALCULATED USING NDOT STANDARD PLAN R-1.1.3(206,207)

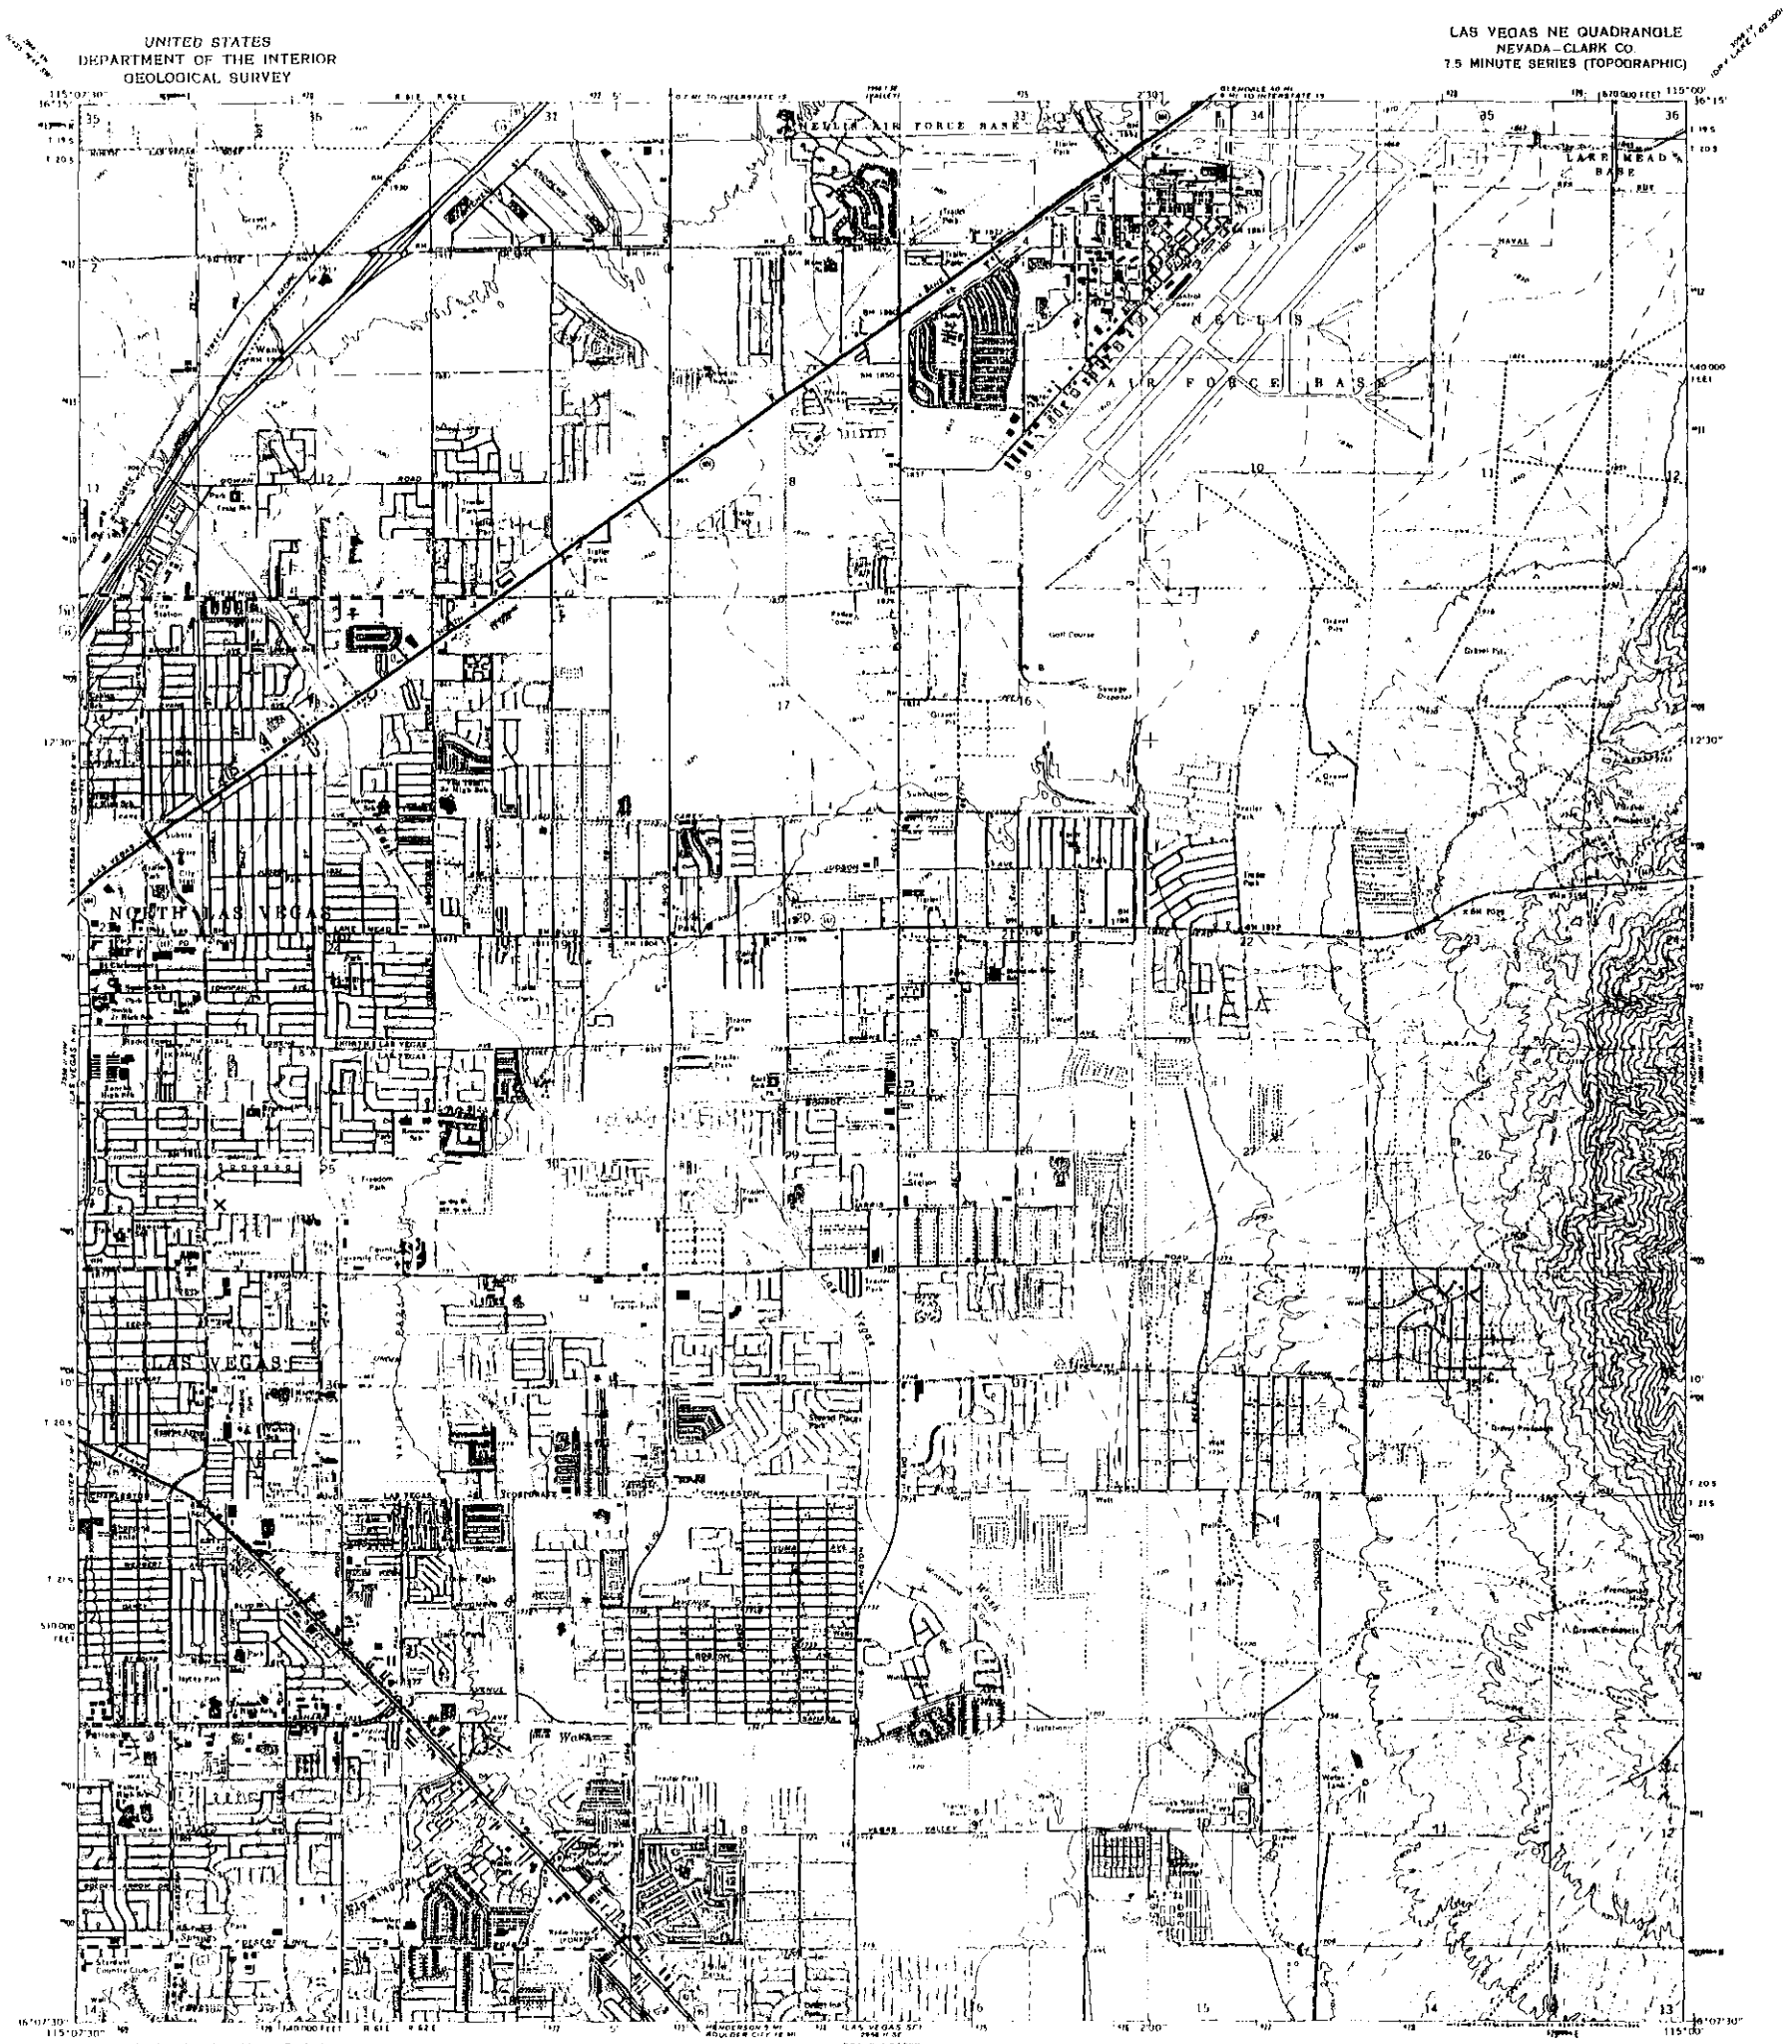
GEOLOGICAL SURVEY

LAS VEGAS NE QUADRANGLE
NEVADA – CLARK CO.
7.5 MINUTE SERIES (TOPOGRAPHIC)



Mapped, edited, and published by the Geological Survey

Control by USGS and NOS/NOAA

Topography by photogrammetric methods from aerial photographs taken 1965. Field checked 1967

Polyconic projection. 10,000 foot grid ticks based on Nevada coordinate system, east zone
1000-meter Universal Transverse Mercator grid ticks, zone 11, shown in blue
1927 North American Datum
To place on the predicted North American Datum 1983 move the projection lines 5 meters north and 75 meters east as shown by dashed corner ticks

Red tint indicates areas in which only landmark buildings are shown

A portion of the west half of this map lies within a subsidence area

There may be private inholdings within the boundaries of the National or State reservations shown on this map

UTM GRID AND 1984 MAGNETIC NORTH DECLINATION AT CENTER OF SHEET

SCALE 1:24000

CONTOUR INTERVAL 20 FEET
SUPPLEMENTARY CONTOUR INTERVAL 10 FEET
NATIONAL GEODETIC VERTICAL DATUM OF 1929

THIS MAP COMPLIES WITH NATIONAL MAP ACCURACY STANDARDS
FOR SALE BY U.S. GEOLOGICAL SURVEY, P.O. BOX 25286, DENVER, COLORADO 80225
A FOLDER DESCRIBING TOPOGRAPHIC MAPS AND SYMBOLS IS AVAILABLE ON REQUEST

QUADRANGLE LOCATION

Revisions shown in purple and woodland compiled from aerial photographs taken 1982 and other sources. This information not field checked. Map edited 1984

Purple tint indicates extension of urban areas

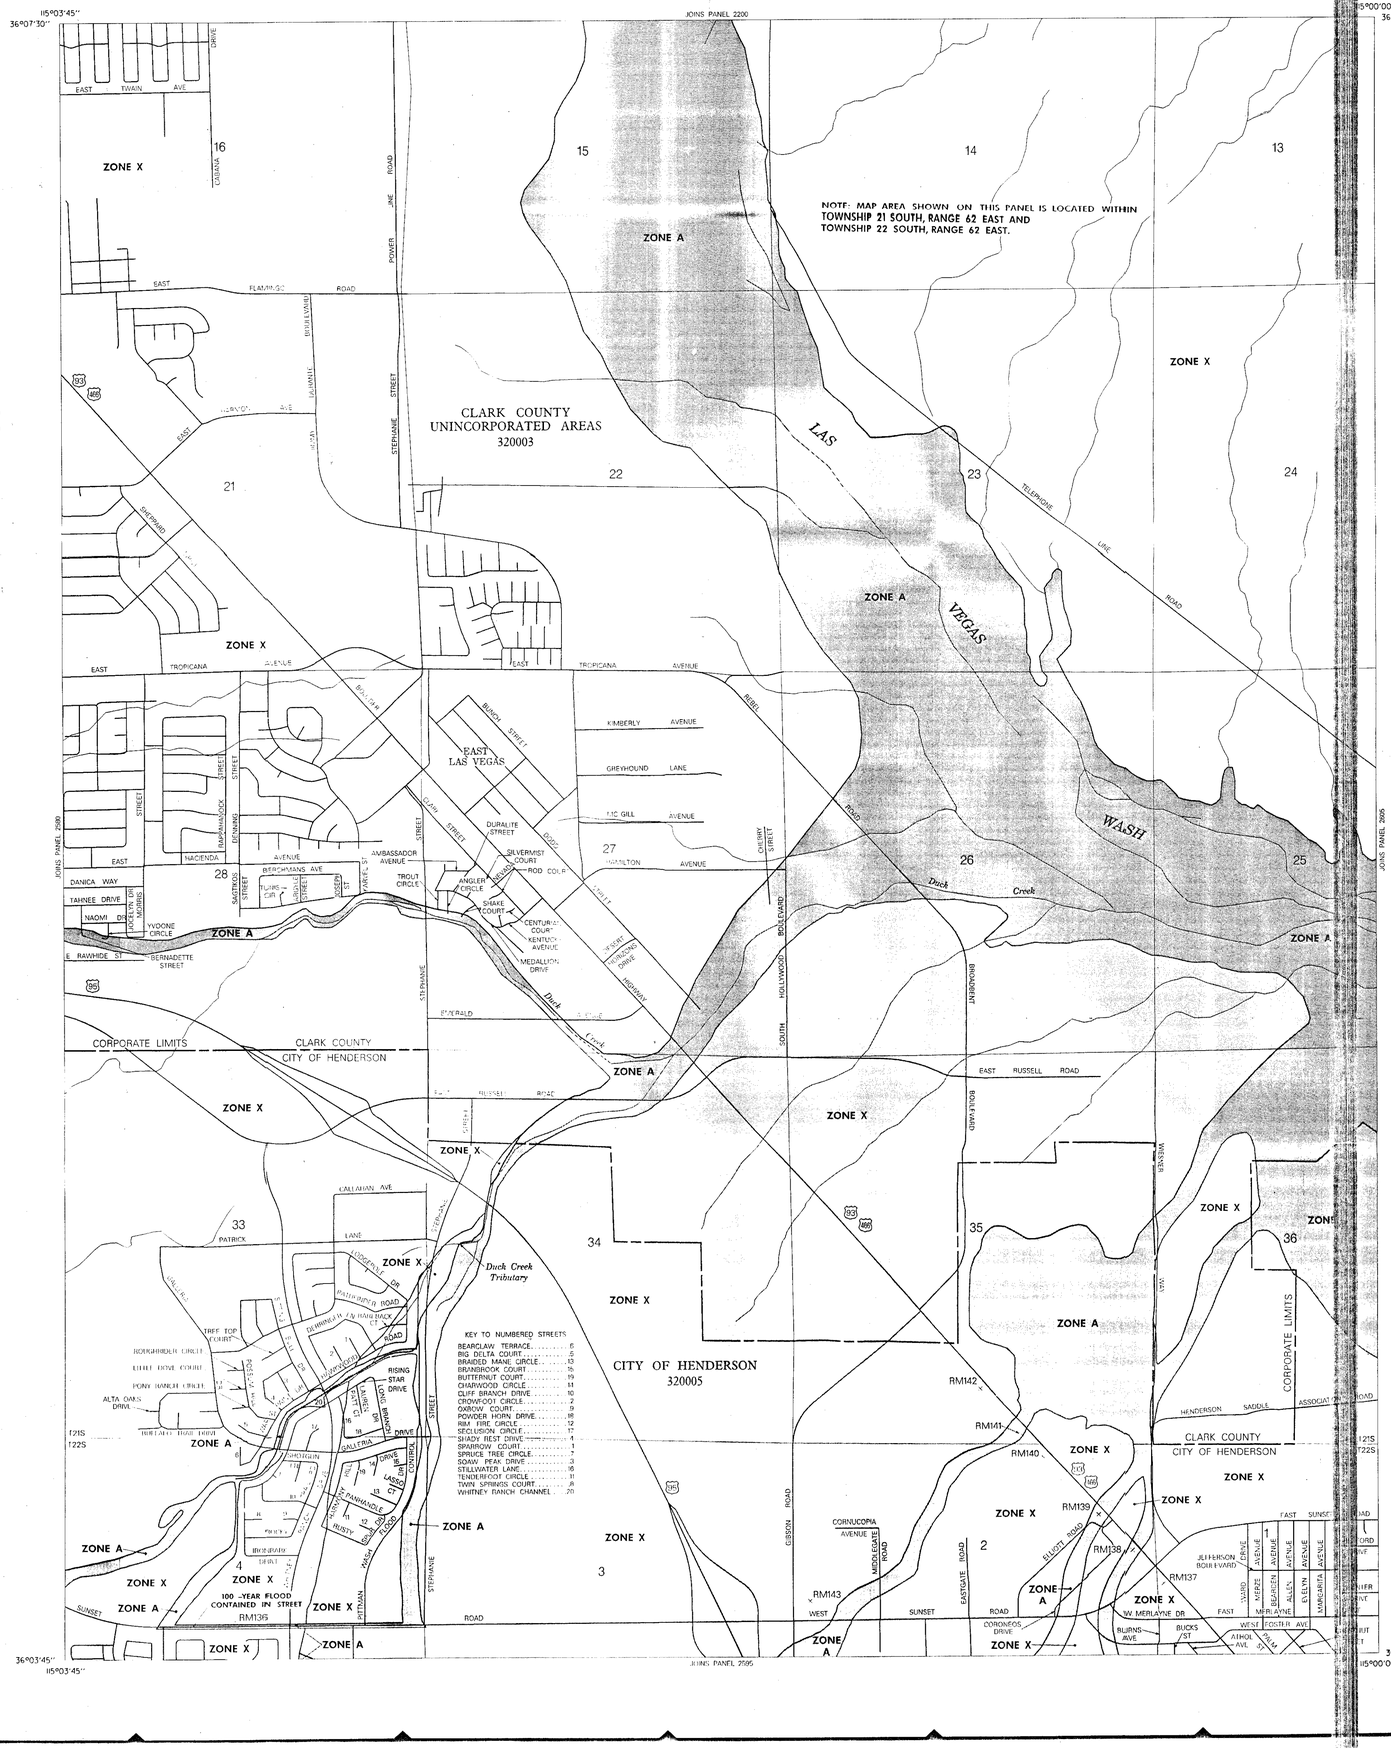
ELEVATION REFERENCE MARKS

REFERENCE MARK	ELEVATION (FEET NGVD)	DESCRIPTION OF LOCATION
RM136	1755.63	"T" bar located approximately 3,145 feet east of RM24, and approximately 40 feet north of the north edge of Sunset Road. Established by U.S. Soil Conservation Service.
RM137	1657.91	Spike and tin located approximately 200 feet southeast of the intersection of Sunset Road and Boulder Highway on the south edge of the southbound lane. Established by U.S. Soil Conservation Service.
RM138	1656.38	Spike and tin located on Boulder Highway approximately 110 feet south of the junction with Coronado Drive. Established by U.S. Soil Conservation Service.
RM139	1653.59	Spike and tin located on Boulder Highway at approximate intersection with Elliott Road. Established by U.S. Soil Conservation Service.
RM140	1647.77	Spike and tin located on Boulder Highway at approximate intersection with Castlerock Drive. Established by U.S. Soil Conservation Service.
RM141	1648.68	Spike and tin located on Boulder Highway approximately 450 feet north of Castlerock Drive. Established by U.S. Soil Conservation Service.
RM142	1649.42	Spike and tin located on Boulder Highway approximately 1,450 feet north of Castlerock Drive. Established by U.S. Soil Conservation Service.
RM143	1700.09	"T" bar located approximately 180 feet east of the east edge of Gibson Road, and approximately 300 feet north of the north edge of Sunset Road. Established by U.S. Soil Conservation Service.



LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD

- **ZONE A** No base flood elevations determined.
- **ZONE AE** Base flood elevations determined.
- **ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
- **ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE A99** To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevations determined.
- **ZONE V** Coastal flood with velocity hazard (wave action); no base flood elevations determined.
- **ZONE VE** Coastal flood with velocity hazard (wave action); base flood elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

- **ZONE X** Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.

OTHER AREAS

- **ZONE X** Areas determined to be outside 500-year floodplain.
- **ZONE D** Areas in which flood hazards are undetermined.

UNDEVELOPED COASTAL BARRIERS

Identified 1983 | Identified 1990 | Otherwise Protected Areas

Coastal barrier areas are normally located within or adjacent to Special Flood Hazard Areas.

- Flood Boundary
- Floodway Boundary
- Zone D Boundary
- Boundary Dividing Special Flood Hazard Zones, and Boundary Dividing Areas of Different Coastal Base Flood Elevations Within Special Flood Hazard Zones.
- 513 — Base Flood Elevation Line; Elevation in Feet. See Map Index for Elevation Datum.
- D — D — Cross Section Line
- (EL 987) — Base Flood Elevation in Feet where Uniform Within Zone. See Map Index for Elevation Datum.
- RM7 — Elevation Reference Mark
- M2 — River Mile
- 97°07'30", 32°22'30" — Horizontal Coordinates Based on North American Datum of 1927 (NAD 27) Projection

NOTES

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas.

Coastal base flood elevations apply only landward of 0.0 (NGVD) and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning.

Areas of Special Flood Hazard (100-year flood) include Zones A, AE, AH, AO, A99, V, and VE.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

This map may incorporate approximate boundaries of Coastal Barrier Resource System Units and /or Otherwise Protected Areas established under the Coastal Barrier Improvement Act of 1990 (PL 101-591).

Corporate limits shown are current as of the date of this map. The user should contact appropriate community officials to determine if corporate limits have changed subsequent to the issuance of this map.

For community map revision history prior to countywide mapping, see Section 6.0 of the Flood Insurance Study Report.

For adjoining map panels and base map source see separately printed Map Index.
