Re: LOMR for the Northeast C-1 Detention Basin in the City of Henderson, Nevada

Dear LOMR Manager:

G. C. Wallace, Inc. (GCW) has been contracted by the City of Henderson, Nevada, to prepare a Letter of Map Revision (LOMR) for the Northeast C-1 Detention Basin, located within the City of Henderson, Nevada. The Conditional Letter of Map Revision (CLOMR) for Northeast C-1 Detention Basin (Case No. 08-09-0093R) was approved on May 16, 2008. The purpose of this LOMR is to revise existing Community Panels 32003C 2620 E and 2615 E to reflect the construction of the drainage improvements described in the CLOMR.

The project site is located in portions of Sections 10, 14, and 15; Township 22 South; Range 63 East. A vicinity map and location map showing the location of the project are included as Figure 1 and Figure 2.

This request for a LOMR is based on the record drawings consisting of the installation of an upper berm, a concrete-lined collection channel, the Northeast C-1 detention basin, and an outfall storm drain facility. The following information supporting this LOMR request is enclosed:

- FEMA MT-2 Form 1, including community acknowledgement of the map revision request
- Figure 1 Vicinity Map
- Figure 2 Location Map
- Figure 3 Effective FIRM
- Figure 4 Proposed FIRM Revisions
- Figure 5 Annotated FIRM
- Certified record drawings
- CLOMR approval letters to City of Henderson and Clark County, Nevada
- Electronic file of Proposed FIRM revisions

Additionally, the following information will be sent to the FEMA Fee Charge System Administrator:

- A check in the amount of \$5,000.00, payable to the National Flood Insurance Program, for review and processing fees.
- Payment Information Form (81-107).

FEMA — National LOMR Manager Northeast C-1 Detention Basin LOMR April 28, 2010 Page 2

# ADDITIONAL REQUESTS FOR INFORMATION IN CLOMR APPROVAL LETTER

A comment on page 3 of the CLOMR approval letter requests that a hydraulic analysis for the Drake Channel be submitted to show the flow quantity that would weir over the right overbank of the channel. A work map is also requested to indicate the boundary delineation of the Special Flood Hazard Area (SFHA) that would result from the weir flow. A HEC-RAS analysis for the Drake Channel was submitted with the response to comments on the Northeast C-1 Detention Basin CLOMR, dated January 29, 2008. The 100-year flow (893 cfs at the confluence with the C-1 Channel) used in the Drake Channel HEC-RAS model was referenced from the City of Henderson's 2005-2006 Local Drainage Master Plan Project. This flow rate is conservative and is based on future curve numbers with existing storm drain facilities in place. Furthermore, this flow rate is also higher than the flow rate (482 cfs at the confluence with the C-1 Channel, CP55) calculated in the Pre-Design Report for the Northeast C-1 Detention Basin (April 14, 2005, G.C. Wallace, Inc). The flow in the Drake Channel is reduced as a result of the collector channel proposed with the Northeast C-1 Detention Basin improvements, which intercepts flow from the east and conveys it north to the detention basin. The HEC-RAS model for the Drake Channel extends east from the confluence with the C-1 Channel to the collector channel. The results of the analysis shows that the Henderson Drainage Master Plan flows are contained within the Drake Channel, including at the Racetrack Road culverts, flows do not overtop Racetrack Road. The Zone A SFHA floodplain, located west of the Northeast C-1 Detention Basin collector channel that crosses the Drake Channel approximately 2000 feet east of Magic Way, can be removed based on the results of the previously submitted Drake Channel hydraulic analysis. Additional analysis for the Drake Channel does not appear necessary.

A second comment on page 3 of the CLOMR approval letter requests coordination of the Northeast C-1 Detention Basin LOMR and the Heritage Park Outfall LOMR (CLOMR Case No. 08-09-0009R). If the Northeast C-1 Detention Basin LOMR is submitted prior to the Heritage Park Outfall LOMR. the submitted hydraulic analysis must tie in to the currently effective information. If the Northeast C-1 Detention Basin LOMR is submitted following the Heritage Park Outfall LOMR, the hydraulic analysis must tie in to the Heritage Park Outfall post-project hydraulic conditions. At a meeting on April 5, 2010 with representatives from the City of Henderson, the Clark County Regional Flood Control District and the consultant, VTN Consulting, for the Heritage Park Outfall, it was discussed that since both projects are substantially complete, the currently effective Zone A SFHA floodplain does not exist. It was agreed that the best course of action would be to submit both LOMRs concurrently to clarify the Zone A SFHA boundary at the confluence of the Drake Channel and the C-1 Channel. The Heritage Park LOMR proposes the removal of the Zone A SFHA floodplain to the south of the Drake Channel (at the confluence with the C-1 Channel) and the Northeast C-1 Detention Basin LOMR proposes removal of the Zone A SFHA floodplain, located west of the Northeast C-1 Detention Basin collector channel that crosses the Drake Channel approximately 2000 feet east of Magic Way.

# FLOOD-CONTROL IMPROVEMENTS

Please note that the technical calculations used to support the approved CLOMR have not changed; therefore, is not resubmitted with this LOMR. Figures 1-5 were taken from the CLOMR, the titles revised to "Northeast C-1 Detention Basin LOMR". Figures 4 and 5 were further updated with this LOMR to reflect the effective Shaded Zone X and Zone X flood zones that were not included on the

FEMA – National LOMR Manager Northeast C-1 Detention Basin LOMR April 28, 2010 Page 3

previously submitted figures. A site investigation confirmed that the flood-control structures were built in substantial conformance with the design drawings titled "Northeast C-1 Detention Basin"; therefore, FEMA MT-2 Forms 2 and 3 is not resubmitted with this LOMR. Based on field observations, I certify that the detention basin and other flood-control structures have been constructed according to the intent of the record drawings.

If you have any questions or need additional information, please contact us at (702) 804-2000.

Cordially,

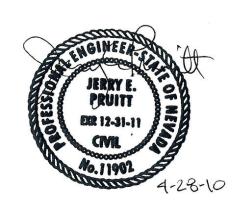

G. C. WALLACE, INC.

Jerry E. Pruitt, PE Senior Vice President Flood Control Division

# Federal Emergency Management Agency

Washington, D.C. 20472

# MAY 1 6 2008

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Rory Reid Chair, Clark County Board of Commissioners 500 South Grand Central Parkway Las Vegas, NV 89106 IN REPLY REFER TO: Case No.: 08-09-0093R

Community: Clark County, NV Community No.: 320003

104

Dear Mr. Reid:

This responds to a request that the Department of Homeland Security's Federal Emergency Management Agency (FEMA) comment on the effects that a proposed project would have on the effective Flood Insurance Rate Map (FIRM) for Clark County, Nevada and Incorporated Areas (the effective FIRM for your community), in accordance with Part 65 of the National Flood Insurance Program (NFIP) regulations. In a letter dated October 16, 2007, Mr. William E. Hunter III, P.E., G.C. Wallace, Inc., requested that FEMA evaluate the effects along Unnamed Tributary 1 to C-1 Channel (Tributary 1), from just upstream of C-1 Channel to approximately 5,000 feet upstream of Drake Channel, and Unnamed Tributary 2 to C-1 Channel (Tributary 2), from just upstream to approximately 5,800 feet upstream of the confluence with Tributary 1, that updated topography, a proposed channel, the proposed Northeast C-1 Detention Basin, a proposed reinforced box culvert (RCB), and a proposed berm would have on the flood hazard information shown on the effective FIRM.

All data required to complete our review of this request for a Conditional Letter of Map Revision (CLOMR) were submitted with letters from Mr. Hunter.

Because this revision request also affects the City of Henderson a separate CLOMR for that community was issued on the same date as this CLOMR.

We reviewed the submitted data and the data used to prepare the effective FIRM for your community and determined that the proposed project meets the minimum floodplain management criteria of the NFIP. The submitted existing conditions HEC-RAS hydraulic computer models, dated September 14, 2007, and January 29, 2008, based on updated topographic information, were used as the base conditions model in our review of the proposed conditions model for this CLOMR request. We believe that, if the proposed project is constructed as shown on the plans entitled "Northeast C-1 Detention Basin," and as described in the report entitled "Northeast C-1 Detention Basin Conditional Letter of Map Revision (CLOMR)," both prepared by G.C. Wallace, Inc., dated October 2007, and the data listed below are received, a revision to the FIRM would be warranted.

As a result of the proposed project, the base (1-percent-annual-chance) flood along Tributary 1, from just upstream of C-1 Channel to approximately 3,400 feet upstream of Drake Channel, will be intercepted and diverted into the proposed channel located approximately 10,200 feet upstream of Magic Way to approximately 2,200 feet upstream, the proposed Northeast C-1 Detention Basin located at the outlet of the proposed channel to approximately 1,800 feet upstream of Magic Way, and the proposed RCB located at the outlet of the detention basin to just upstream of C-1 Channel. The proposed channel, detention basin,

and RCB will contain the base flood along Tributary 1. The proposed confluence of Tributary 2 with Tributary 1 will be located approximately 3,600 feet downstream of the existing confluence. The effective Special Flood Hazard Area (SFHA), the area that would be inundated by the base flood, designated Zone A, with no Base Flood Elevations (BFEs) determined, along the effective flow path of Tributary 1 will be removed and the area will be redesignated as Zone X (shaded), an area subject to alluvial fan flooding outside of the SFHA, from just upstream of the C-1 Channel to approximately 3,400 feet upstream of Drake Channel.

Also, a proposed berm will be located along Tributary 2 approximately 3,400 upstream of the existing confluence with Tributary 1. As a result of the proposed berm, the SFHA along Tributary 2 will be redirected toward the proposed confluence with Tributary 1 for a length of 6,300 feet. The maximum SFHA width, approximately 600 feet, will occur approximately 3,000 feet upstream of the proposed confluence with Tributary 1. The SFHA along Tributary 2 will be designated Zone A. The effective SFHA (Zone A) along Tributary 2 will be redesignated Zone X (shaded), an area of base flooding with average flood depths of less than 1 foot, from just upstream to approximately 3,400 feet upstream of the existing confluence with Tributary 1.

The above-referenced changes that will occur in your community include those along a portion of the redirected flow along Tributary 2 from approximately 6,500 feet upstream to approximately 8,700 feet upstream of the proposed confluence with Tributary 1.

In addition, as a result of the updated topographic information and proposed project, the width of the SFHA will increase in some areas and decrease in other areas compared to the effective SFHA width along Tributary 2 from approximately 3,400 feet upstream to approximately 5,800 feet upstream of the existing confluence with Tributary 1. The maximum increase in SFHA width, approximately 300 feet, will occur approximately 5,000 feet upstream of the existing confluence with Tributary 1. The maximum decrease in SFHA width, approximately 200 feet, will occur 5,500 feet upstream of the existing confluence with Tributary 1.

Upon completion of the project, your community may submit the data listed below and request that we make a final determination on revising the effective FIRM.

- Detailed application and certification forms must be used for requesting final revisions to the
  maps. Therefore, when the map revision request for the area covered by this letter is submitted,
  Form 1, entitled "Overview & Concurrence Form," must be included. (A copy of this form is
  enclosed.)
- The detailed application and certification forms listed below may be required if as-built conditions
  differ from the preliminary plans. If required, please submit new forms (copies of which are
  enclosed) or annotated copies of the previously submitted forms showing the revised information.

Form 2, entitled "Riverine Hydrology & Hydraulics Form"

Form 3, entitled "Riverine Structures Form"

Hydraulic analyses, for as-built conditions, of the base flood, together with a topographic work map showing the revised floodplain boundaries, must be submitted with Form 2.

Effective October 1, 2007, FEMA revised the fee schedule for reviewing and processing requests for conditional and final modifications to published flood information and maps. In accordance with this schedule, the current fee for this map revision request is \$4,800 and must be received before we can begin processing the request. Please note, however, that the fee schedule is subject to change, and requesters are required to submit the fee in effect at the time of the submittal. Payment of this fee shall be made in the form of a check or money order, made payable in U.S. funds to the National Flood Insurance Program, or by credit card (Visa or MasterCard only). The payment, along with the revision application, must be forwarded to the following address:

# FEMA National Service Provider 3601 Eisenhower Avenue Alexandria, VA 22304-6425

- As-built plans, certified by a registered professional engineer, of all proposed project elements
- Community acknowledgment of the map revision request
- Our detailed analysis of the HEC-RAS hydraulic computer model for Drake Channel, submitted for Case No. 03-09-0270P, revealed that the base flood would not be contained in the channel at various locations from approximately 400 feet upstream of its confluence with C-1 Channel to its confluence with the East C-1 Levee. Furthermore, it appears from the submitted information that the culvert under Race Track Road does not have the capacity to convey the base flood. We are concerned that a portion of the base flood would overtop the right overbank of Drake Channel and flood areas north of Drake Channel. Please submit a hydraulic analysis showing how much flow would weir over the right overbank of the Drake Channel, together with a topographic work map, certified by a registered professional engineer, that shows the boundary delineations of the SFHA that would result from the weir flow.
- A request for a CLOMR for the Heritage Park Outfall (Case No. 08-09-0009R) was issued on February 29, 2008. Upon completion of the project for which this CLOMR is issued, please comply with one of the following alternative conditions:
  - If the Letter of Map Revision (LOMR) request for the project for which this CLOMR is issued is submitted before the LOMR that follows Case No. 08-09-0009R is issued, then the revised base flood WSELs and SFHA boundary delineations must take into consideration the currently effective information. Therefore, please submit a hydraulic analysis and topographic work map, certified by a registered professional engineer, to analyze the effect of the base flood on Drake Channel from its confluence with C-1 Channel to its confluence with the East C-1 Levee, to delineate the SFHA along the flooding source.
  - o If the LOMR that follows Case No. 08-09-0009R is issued before completion of the project for which this CLOMR is issued, the submitted hydraulic analysis must tie into the Drake Channel post-project conditions hydraulic analysis for the LOMR that follows Case No. 08-09-0009R.

After receiving appropriate documentation to show that the project has been completed, FEMA will initiate a revision to the FIRM.

The basis of this CLOMR is, in whole or in part, a channel-modification/culvert project. NFIP regulations, as cited in Paragraph 60.3(b)(7), require that communities assure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management regulations. Consequently, the ultimate responsibility for maintenance of the modified channel and culvert rests with your community.

This CLOMR is based on minimum floodplain management criteria established under the NFIP. Your community is responsible for approving all floodplain development and for ensuring all necessary permits required by Federal or State law have been received. State, county, and community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction in the SFHA. If the State, county, or community has adopted more restrictive or comprehensive floodplain management criteria, these criteria take precedence over the minimum NFIP criteria.

If you have any questions regarding floodplain management regulations for your community or the NFIP in general, please contact the Consultation Coordination Officer (CCO) for your community. Information on the CCO for your community may be obtained by calling the Director, Mitigation Division of FEMA in Oakland, California, at (510) 627-7175. If you have any questions regarding this CLOMR, please call our Map Assistance Center, toll free, at 1-877-FEMA MAP (1-877-336-2627).

Sincerely,

Craig S. Kennedy, CFM, Program Specialist

RETURN RECEIPT REQUESTED

IN REPLY REFER TO: Case No.: 08-09-0093R

The Honorable James B. Gibson Mayor, City of Henderson 240 South Water Street Henderson, NV 89015 Community: City of Henderson, NV Community No.: 320005

104

Dear Mayor Gibson:

This responds to a request that the Department of Homeland Security's Federal Emergency Management Agency (FEMA) comment on the effects that a proposed project would have on the effective Flood Insurance Rate Map (FIRM) for Clark County, Nevada and Incorporated Areas (the effective FIRM for your community), in accordance with Part 65 of the National Flood Insurance Program (NFIP) regulations. In a letter dated October 16, 2007, Mr. William E. Hunter III, P.E., G.C. Wallace, Inc. requested that FEMA evaluate the effects along Unnamed Tributary 1 to C-1 Channel (Tributary 1), from just upstream of C-1 Channel to approximately 5,000 feet upstream of Drake Channel, and Unnamed Tributary 2 to C-1 Channel (Tributary 2), from just upstream to approximately 5,800 feet upstream of the confluence with Tributary 1, that updated topography, a proposed channel, the proposed Northeast C-1 Detention Basin, a proposed reinforced box culvert (RCB), and a proposed berm would have on the flood hazard information shown on the effective FIRM.

All data required to complete our review of this request for a Conditional Letter of Map Revision (CLOMR) were submitted with letters from Mr. Hunter.

Because this revision request also affects Clark County, a separate CLOMR for that community was issued on the same date as this CLOMR.

We reviewed the submitted data and the data used to prepare the effective FIRM for your community and determined that the proposed project meets the minimum floodplain management criteria of the NFIP. The submitted existing conditions HEC-RAS hydraulic computer models, dated September 14, 2007, and January 29, 2008, based on updated topographic information, were used as the base conditions model in our review of the proposed conditions model for this CLOMR request. We believe that, if the proposed project is constructed as shown on the plans entitled "Northeast C-1 Detention Basin," and as described in the report entitled "Northeast C-1 Detention Basin Conditional Letter of Map Revision (CLOMR)," both prepared by G.C. Wallace, Inc., dated October 2007, and the data listed below are received, a revision to the FIRM would be warranted.

As a result of the proposed project, the base (1-percent-annual-chance) flood along Tributary 1, from just upstream of C-1 Channel to approximately 3,400 feet upstream of Drake Channel, will be intercepted and diverted into the proposed channel located approximately 10,200 feet upstream of Magic Way to approximately 2,200 feet upstream, the proposed Northeast C-1 Detention Basin located at the outlet of the proposed channel to approximately 1,800 feet upstream of Magic Way, and the proposed RCB located at the outlet of the detention basin to just upstream of C-1 Channel. The proposed channel, detention basin, and RCB will contain the base flood along Tributary 1. The proposed confluence of Tributary 2 with

Tributary 1 will be located approximately 3,600 feet downstream of the existing confluence. The effective Special Flood Hazard Area (SFHA), the area that would be inundated by the base flood, designated Zone A, with no Base Flood Elevations (BFEs) determined, along the effective flow path of Tributary 1 will be removed and the area will be redesignated as Zone X (shaded), an area subject to alluvial fan flooding outside of the SFHA, from just upstream of the C-1 Channel to approximately 3,400 feet upstream of Drake Channel.

The above-referenced changes that occur in your community include those along Tributary 1 from just upstream of C-1 Channel to approximately 10,200 feet upstream of Magic Way, and those along Tributary 2 from just upstream to approximately 2,500 feet upstream of the proposed confluence with Tributary 1 and from approximately 6,200 feet upstream to 6,500 feet upstream of the proposed confluence with Tributary 1.

In addition, as a result of the updated topographic information and proposed project, the width of the SFHA will decrease compared to the effective SFHA width along Tributary 1 from approximately 3,400 feet upstream to approximately 5,000 feet upstream of Drake Channel. The maximum decrease in SFHA width, approximately 200 feet, will occur approximately 4,200 feet upstream of Drake Channel. Also, the width of the SFHA will decrease compared to the effective SFHA width along Tributary 2 from approximately 3,300 feet upstream to approximately 3,400 feet upstream of the existing confluence with Tributary 1. The maximum decrease in SFHA width, approximately 100 feet, will occur approximately 3,300 feet upstream of the existing confluence with Tributary 1.

Upon completion of the project, your community may submit the data listed below and request that we make a final determination on revising the effective FIRM.

- Detailed application and certification forms must be used for requesting final revisions to the
  maps. Therefore, when the map revision request for the area covered by this letter is submitted,
  Form 1, entitled "Overview & Concurrence Form," must be included. (A copy of this form is
  enclosed.)
- The detailed application and certification forms listed below may be required if as-built conditions differ from the preliminary plans. If required, please submit new forms (copies of which are enclosed) or annotated copies of the previously submitted forms showing the revised information.

Form 2, entitled "Riverine Hydrology & Hydraulics Form"

Form 3, entitled "Riverine Structures Form"

Hydraulic analyses, for as-built conditions, of the base flood together with a topographic work map showing the revised floodplain boundaries, must be submitted with Form 2.

• Effective October 1, 2007, FEMA revised the fee schedule for reviewing and processing requests for conditional and final modifications to published flood information and maps. In accordance with this schedule, the current fee for this map revision request is \$4,800 and must be received before we can begin processing the request. Please note, however, that the fee schedule is subject to change, and requesters are required to submit the fee in effect at the time of the submittal. Payment of this fee shall be made in the form of a check or money order, made payable in U.S. funds to the National Flood Insurance Program, or by credit card (Visa or MasterCard only). The payment, along with the revision application, must be forwarded to the following address:

# FEMA National Service Provider 3601 Eisenhower Avenue Alexandria, VA 22304-6425

- As-built plans, certified by a registered professional engineer, of all proposed project elements
- Community acknowledgment of the map revision request
- Our detailed analysis of the HEC-RAS hydraulic computer model for Drake Channel, submitted for Case No. 03-09-0270P, revealed that the base flood would not be contained in the channel at various locations from approximately 400 feet upstream of its confluence with C-1 Channel to its confluence with the East C-1 Levee. Furthermore, it appears from the submitted information that the culvert under Race Track Road does not have the capacity to convey the base flood. We are concerned that a portion of the base flood would overtop the right overbank of Drake Channel and flood areas north of Drake Channel. Please submit a hydraulic analysis showing how much flow would weir over the right overbank of the Drake Channel, together with a topographic work map, certified by a registered professional engineer, that shows the boundary delineations of the SFHA that would result from the weir flow.
- A request for a CLOMR for the Heritage Park Outfall (Case No. 08-09-0009R) was issued on February 29, 2008. Upon completion of the project for which this CLOMR is issued, please comply with one of the following alternative conditions:
  - o If the Letter of Map Revision (LOMR) request for the project for which this CLOMR is issued is submitted before the LOMR that follows Case No. 08-09-0009R is issued, then the revised base flood WSELs and SFHA boundary delineations must take into consideration the currently effective information. Therefore, please submit a hydraulic analysis and topographic work map, certified by a registered professional engineer, to analyze the effect of the base flood on Drake Channel from its confluence with C-1 Channel to its confluence with the East C-1 Levee, to delineate the SFHA along the flooding source.
  - o If the LOMR that follows Case No. 08-09-0009R is issued before completion of the project for which this CLOMR is issued, the submitted hydraulic analysis must tie into the Drake Channel post-project conditions hydraulic analysis for the LOMR that follows Case No. 08-09-0009R.

After receiving appropriate documentation to show that the project has been completed, FEMA will initiate a revision to the FIRM.

The basis of this CLOMR is, in whole or in part, a channel-modification/culvert project. NFIP regulations, as cited in Paragraph 60.3(b)(7), require that communities assure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management regulations. Consequently, the ultimate responsibility for maintenance of the modified channel and culvert rests with your community.

This CLOMR is based on minimum floodplain management criteria established under the NFIP. Your community is responsible for approving all floodplain development and for ensuring all necessary permits required by Federal or State law have been received. State, county, and community officials, based on

knowledge of local conditions and in the interest of safety, may set higher standards for construction in the SFHA. If the State, county, or community has adopted more restrictive or comprehensive floodplain management criteria, these criteria take precedence over the minimum NFIP criteria.

If you have any questions regarding floodplain management regulations for your community or the NFIP in general, please contact the Consultation Coordination Officer (CCO) for your community. Information on the CCO for your community may be obtained by calling the Director, Mitigation Division of FEMA in Oakland, California, at (510) 627-7175. If you have any questions regarding this CLOMR, please call our Map Assistance Center, toll free, at 1-877-FEMA MAP (1-877-336-2627).

As the community official responsible for floodplain management, I hereby acknowledge that we have received and reviewed this Letter of Map Revision (LOMR) or conditional LOMR request. Based upon the community's review, we find the completed or proposed project meets or is designed to meet all of the community floodplain management requirements, including the requirement that no fill be placed in the regulatory floodway, and that all necessary Federal, State, and local permits have been, or in the case of a conditional LOMR, will be obtained. In addition, we have determined that the land and any existing or proposed structures to be removed from the SFHA are or will be reasonably safe from flooding as defined in 44CFR 65.2(c), and that we have available upon request by FEMA, all analyses and documentation used to make this determination.

STANDARD GENERAL NOTES

ALL CONSTRUCTION AND MATERIALS FOR THIS PROJECT SHALL BE IN ACCORDANCE WITH THE "UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS", CLARK COUNTY AREA, NEVADA LATEST EDITION, AND THE "UNIFORM DRAWINGS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS", CLARK COUNTY AREA, NEVADA LATEST EDITION, UNLESS OTHERWISE SPECIFIED BY NOTE ON THE PLANS AND/OR SPECIAL PROVISIONS.

SOUTHERN NEVADA WATER AUTHORITY PHONE 882—3444

LOCATIONS OF UNDERGROUND UILLITES SHOWN ON THE DRAWINGS WERE OBTAINED FROM INFORMATION RECEIVED FROM THE 
APPLICABLE UTILITY COMPANIES NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR UTILITIES OR STRUCTURES NOT SHOWN, OR FOR UTILITIES OR STRUCTURES NOT SHOWN, OR FOR UTILITIES OR STRUCTURES NOT SHOWN ON THESE DRAWINGS. CONTRACTOR TO VERIFY THE EXACT LOCATION OF UTILITIES PRISTS TO START OF CONSTRUCTION, THE CONTRACTOR'S RESPONSIBILITY REGARDING UTILITIES SHALL BE AS REQUIRED UNDER SECTION 107.17 OF THE UNIFORM STANDARD SPECIFICATIONS FOR CLARK COUNTY AREA, NEVADA AND AS PROVIDED IN THE SPECIFICATIONS.

UNIFORM STANDARD SPECIFICATIONS FOR CLARK COUNTY AREA, NEVADA AND AS PROVIDED IN THE SPECIFICATIONS.

THE NEVADA POWER COMPANY SHALL BE RESPONSIBLE FOR THE RELOCATION OF UNDERGROUND OR OVERHEAD POWER LINES THAT INTERFERE WITH THE REQUIRED IMPROVEMENTS AS SHOWN ON THE PLANS.

REMOVAL OR RELOCATION'S OF POWER POLES, TELEPHONE POLES, JOINTLY-OWNED POLES, AND APPURTENANCES WHICH INTERFERE INTERFERE WITH IMPROVEMENTS REQUIRED TO BE CONSTRUCTED UNDER THIS CONTRACT, SHALL BE THE RESPONSIBILITY OF THE RESPECTIVE UTILITY COMPANY. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATION WITH THE UTILITY COMPANIES FAR ENOUGH IN ADVANCE AS TO NOT IMPACT THE SCHEDULE.

THE PLANS DO NOT SHOW ALL SEWER LATERALS, SEWER FORCE MAINS AND WATER SERVICE LATERALS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY REPAIRS OR RELOCATION'S OF LATERALS BROKEN OR IN CONFLICT WITH THE PROPOSED CHANNEL STORM DRAIN OR ROADWAY CONSTRUCTION. IF SEWER OR WATER LINES WITHIN THE PUBLIC UTILITY EASEMENTS REQUIRE REPAIRS, ALL SUCH REPAIRS WILL BE DONE IN ACCORDANCE WITH PUBLIC WORKS DEPARTMENT STANDARDS.

UNLESS OTHERWISE SHOWN ON THE CONTRACT DRAWINGS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OR RELOCATION OF ALL WATER SERVICES AND METERS WHICH INTERFERE WITH IMPROVEMENTS SHOWN ON THE CONTRACT DRAWINGS.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERTICAL ADJUSTMENT OF ALL EXISTING SANITARY, WATER AND STORM SEWER MANHOLES TO THE FINAL FINISH GRADES IN ACCORDANCE WITH SECTIONS 609 AND 630 OF THE "STANDARD SPECIFICATIONS".

CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSITION BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINAGE AND OF INGRESS AND EGRESS TO SAID CONSTRUCTION. EXTENT OF TRANSITIONS TO BE DETERMINED BY THE CITY ENGINEER.

THE CONTRACTOR SHALL DETERMINE THE LOCATION AND DEPTH OF SUSPECTED UTILITY INTERFERENCES, AND SHALL FURNISH INFORMATION ON THE SAME TO THE ENGINEER, NOT LESS THAN TEN (10) DAY PRIOR TO THE ANTICIPATED IMPACT OF THESE SUSPECTED INTERFERENCE'S ON HIS WORK, IF CONFLICTS EXIST, THE CONTRACTOR WILL IMMEDIATELY CONTACT THE ENGINEER AND PROVIDE THE ENGINEER WITH ALL THE NECESSARY DATA SUCH AS ELEVATIONS, HORIZONTAL LOCATIONS, ETC., AND PROVIDE THE ENGINEER WITH SKETCHES INDICATING THE PROPOSED IMPROVEMENT AND THE UTILITY CONFLICT. THE ENGINEER WILL EXAMAD REVIEW ALL THE DATA AND SKETCHES PROVIDED, AND WILL PROVIDE THE CONTRACTOR WITH AN ALTERNATIVE DESIGN WIFIVE (5) DAYS AFTER RECEIPT OF DATA AND SKETCHES.

WORK IN PUBLIC STREETS, ONCE BEGUN, SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT PROPERTY OWNERS AND TO THE TRAVELING PUBLIC.

THE CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING IMPROVEMENTS FROM DAMAGE AND ALL SUCH IMPROVEMENTS DAMAGED BY THE CONTRACTOR'S OPERATION SHALL BE REPAIRED OR RECONSTRUCTED TO THE ENGINEER'S SATISFACTION AT THE EXPENSE OF THE CONTRACTOR. PROTECTION AND REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES NOT DELINEATED ON THE CONTRACT DRAWINGS SHALL BE THE CONTRACTOR'S RESPONSIBILITY. REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES SHALL BE DONE TO THE CONSURVEY SECTION'S SATISFACTION.

BEFORE ANY WORK IS STARTED IN THE RICHT-OF-WAY, THE CONTRACTOR SHALL INSTALL ALL ADVANCE WARNING SIGNS FOR THE CONSTRUCTION ZONE. ALL CONSTRUCTION SIGNING, BARRICADING, AND TRAFFIC SHALL CONFORM TO THE "NEVADA TRAFFIC CONTROL MANUAL" — CURRENT EDITION AND TO THE "MANUAL OF UNFORM TRAFFIC CONTROL DEVICES" — CURRENT EDITION AND BE APPROVBY THE CITY OF HENDERSON BEFORE CONSTRUCTION BEGINS.

THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTIES FROM ANY AND ALD MAKEE THAT MAY OCCUR FROM STORM WATER RUNOFF AND/OR DEPOSITION OF DEBRIS RESULTING FROM ANY AND ALL WORK IN CONNECTION WITH PROJECT CONSTRUCTION.

ALL LENGTH OF STORM DRAIN AND SEWER PIPE IS MEASURED HORIZONTALLY FROM CENTER OF MANHOLE TO CENTER OF MANHOLE, UNLESS OTHERMISE NOTED.

THE CONTRACTOR SHOULD CONTACT THE NEVADA DIVISION OF ENVIRONMENTAL PROTECTION (NDEP) TO ORTAIN A NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT PRIOR TO CONSTRUCTION, ALL CONSTRUCTION PROJECTS ONE ACRE OR LARGER MUST APPLY FOR THE PERMIT THROUGH THE NDEP. ALL QUESTIONS REGARDING THE NPDES PERMIT REQUIREMENTS

SHOULD BE DIRECTED TO THE NDEP (775) 687-9429.

### NOTE:

NON-POTABLE WATER AND SEWER PIPELINE CROSSING AS PER SNWA PLATE NUMBER 03-04-01 - SHEET 2 OF 3

NOTE 1 "ALL NON-POTABLE WATER AND SEWER 'PIPELINES MUST MAINTAIN A MINIMUM OF THREE (3) FEET SEPARATION WHEN INSTALLED OVER SNWS PIPELINES."

THE PIPELINE IN THE DESIGN CROSSING ABOVE THE EXISTING SNWS.
PIPELINE IS IN EXCESS OF THE MINIMUM. THREE (3) FOOT SEPARATION.

"ALL NON-POTABLE WATER OR SEWER LINE CROSSINGS AT ANY DISTANCE ABOVE SNWS PIPELINE WILL BE CONSTRUCTED USING ONE OF THE FOLLOWING OPTIONS." OPTION B "THE LINE WILL BE CONSTRUCTED OF WATER QUALITY MATERIALS MEETING AWWA STANDARDS."

THE CROSSING LINE WILL BE CONSTRUCTED OF DUCTILE IRON PIPE WITH RESTRAINED MECHANICAL JOINT FITTINGS

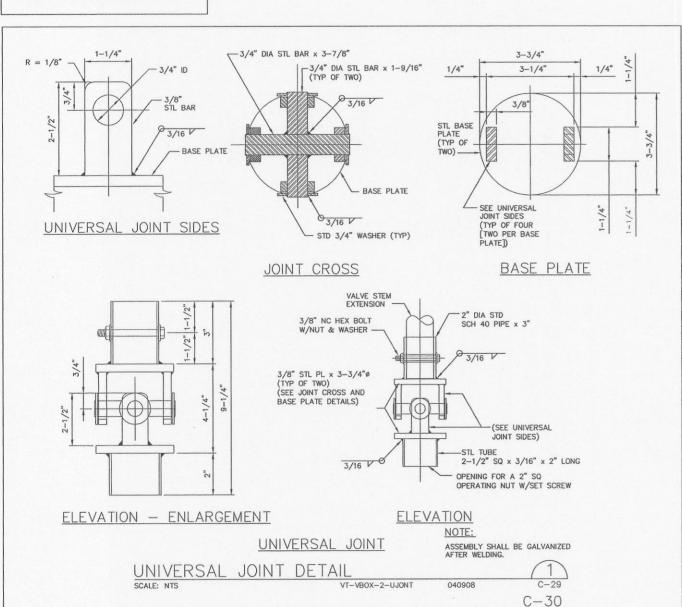

REV. NO. DATE DESCRIPTION

### SOUTHERN NEVADA WATER AUTHORITY CONSTRUCTION NOTES

1. CONTRACTOR SHALL FIELD LOCATE AND PROTECT ALL SNWA/SNWS APPURTENANCES INCLUDING, BUT NOT LIMITED TO AV/AR, ACCESS MANWAYS AND CATHODIC PROTECTION SYSTEMS. ALL ABOVE GROUND STRUCTURES AND AT GRADE STRUCTURES MUST BE ADJUSTED TO NEW GRADE AT CONTRACTOR'S EXPENSE. CATHODIC PROTECTION TEST STATIONS, RECEIPERS, AND AV/AR'S MUST BE RELOCATED TO THE SIDEWALK PER SNWA STANDARDS AND AT THE CONTRACTOR'S EXPENSE. CONTRACTOR TO NOTIFY SOUTHERN REVADA WATER AUTHORITY DEVELOPMENT PLAN REVIEW, AT (702) 862-3444 AT LEAST 48 HOURS PRIOR TO CONSTRUCTION ACTIVITY.

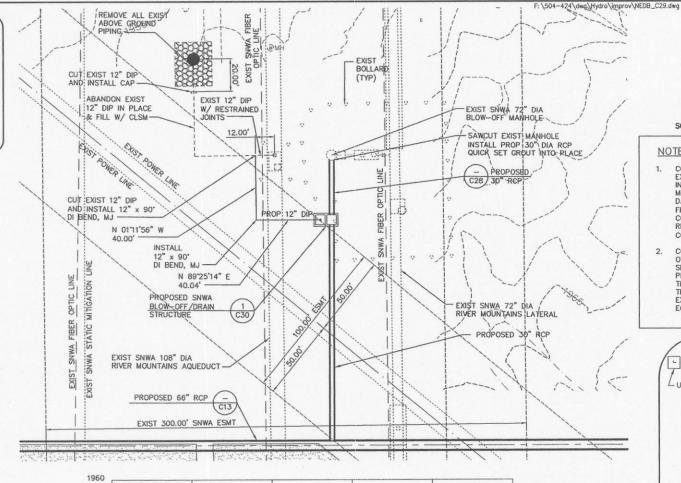

Caleria a Schulte

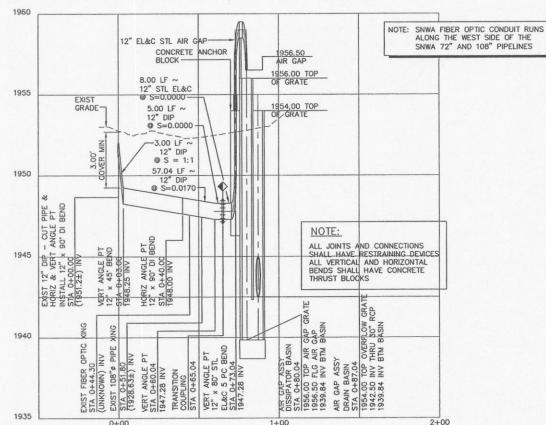

SOUTHERN NEVADA WATER AUTHORITY

A SA

APPROVED

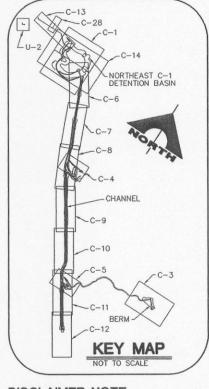

### NOTES:

- CONTRACTOR SHALL EXERCISE EXTREME CAUTION WHEN WORKING IN THE VICINITY OF THE STATIC MIGRATION FIBER OPTIC CABLE. DAMAGE TO THE CABLE RESULTING FROM THE CONTRACTOR'S CONSTRUCTION ACTIVITIES SHALL BE REPAIRED IMMEDIATELY AT THE CONTRACTOR'S SOLE EXPENSE
- CONTRACTOR SHALL VERIFY OVERHEAD CLEARENCE AND SEPARATION REQUIREMENTS PRIOR TO PREFORMING WORK IN THE VICINITY OF THE ELECTRICAL TRANSMISSION LINES AND EXERCISE EXTREME CAUTION WITH HIGH PROFILE

### DISCLAIMER NOTE

UTILITY LOCATIONS SHOWN HEREON ARE APPROXIMATE ONLY. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE EXACT HORIZONTAL AND VERTICAL LOCATION OF ALL EXISTING UNDERGROUND AND OVERHEAD UTILITIES PRIOR TO COMMENCING CONSTRUCTION. NO REPRESENTATION IS MADE THAT ALL EXISTING UTILITIES ARE SHOWN HEREON. THE ENORIER ASSUMES NO RESPONSIBILITY FOR UTILITIES NOT SHOWN OR UTILITIES NOT SHOWN IN THEIR PROPER LOCATION.

GALE Wm. FRASER, II. P.E.
CHIEF ENGINEER/GENERAL MANAGER
CLARK COUNTY REGIONAL FLOOD CONTROL DISTRICT

PROJECT No. 504.430

DATE : FEB. 14, 2008 DRAWING No.

G1

SHEET No.

WORK IN PUBLIC STREETS, ONCE BEGUN, SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT PROPERTY OWNERS AND TO THE TRAVELING PUBLIC.

THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTIES FROM ANY AND ALL DAMAGE THAT MAY OCCUR FROM STORM WATER RUNOFF AND/OR DEPOSITION OF DEBRIS RESULTING FROM ANY AND ALL WORK IN CONNECTION WITH CONSTRUCTION.

PRIOR TO FINAL ACCEPTANCE A CERTIFIED LEGIBLE AS—BUILT DRAWING MUST BE SUBMITTED TO THE CITY OF HENDERSON. AS—BUILT MUST SHOW ALL CHANGES AND ACTUAL FIELD LOCATIONS. IN THE ABSENCE OF CHANGES, A COPY OF APPROVED DRAWINGS WILL BE REQUIRED STATING "INSTALLED AS PER DRAWINGS" AND CERTIFIED AS SUCH BY THE CONTRACTOR.

CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSITION BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINAGE AND OF INGRESS AND EGRESS TO SAID CONSTRUCTION. THE EXTENT OF TRANSITIONS IS TO BE DETERMINED BY THE CITY ENGINEER.

EXISTING UTILITIES ARE LOCATED ON PLANS FOR THE CONVENIENCE OF THE CONTRACTOR ONLY. THE CONTRACTOR SHALL BEAR FULL RESPONSIBILITY FOR THE PROTECTION OF UTILITIES AND THE ENGINEER BEARS NO RESPONSIBILITY FOR UTILITIES NOT SHOWN ON THE PLANS OR NOT IN THE LOCATION SHOWN ON THE PLANS. THIS INCLUDES ALL SERVICE LATERALS OF ANY KIND.

ALL STREET STRUCTURAL SECTIONS SHALL BE PER THE RECOMMENDATIONS OF THE SOILS ENGINEER. BASED ON CBR OR R-VALUES, NO PAVING OR BASE WORK SHALL COMMENCE UNTIL A STREET STRUCTURAL SECTION IS APPROVED BY THE CITY ENGINEER, CITY OF HENDERSON.

D. BEFORE ANY WORK IS STARTED IN THE RIGHT-OF-WAY, THE CONTRACTOR SHALL INSTALL ALL ADVANCE-WARNING SIGNS FOR THE CONSTRUCTION ZONE. THE CONTRACTOR SHALL INSTALL TEMPORARY STOP SIGNS AT ALL NEW STREET ENCROCHMENTS INTO EXISTING PUBLIC STREETS IMMEDIATELY AFTER THE FIRST GRADING WORK IS ACCOMPLISHED AND SHALL MAINTAIN SAID SIGNS UNTIL PERMANENT SIGNS ARE INSTALLED. ALL CONSTRUCTION SIGNING, BARRICADING, AND TRAFFIC DELINEATION SHALL CONFORM TO THE "NEVADA" TRAFFIC CONTROL MANUAL" — CURRENT EDITION AND TO THE "MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES" —CURRENT EDITION AND BE APPROVED BY THE CITY OF HENDERSON BEFORE CONSTRUCTION BEGINS.

WHERE EXISTING PAVEMENT IS CUT TO INSTALL UTILITY SERVICE LINES, BACKFILL AND PAVEMENT REPLACEMENT SHALL BE DONE PER CLARK COUNTY AREA STANDARD DRAWINGS 502, 503, 504, AND SECTIONS 208, 207, AND 208 OF THE UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS' CONSTRUCTION OFFSITE IMPROVEMENTS, THIRD EDITION.

13. EXACT LOCATION OF ALL SAWCUT LINES SHALL BE DETERMINED IN THE FIELD BY A CITY OF HENDERSON PUBLIC WORKS INSPECTOR.

CONTRACT DRAWINGS SHALL BE THE CONTRACTOR'S RESPONSIBILITY. REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES SHALL BE DONE TO THE CITY OF HENDERSON SURVEY DIVISION'S SATISFACTION.

16. CALL BEFORE YOU DIG. 1-800-227-2600.

MODIFICATIONS TO EXISTING UTILITIES SHALL CONFORM TO THE OWNER'S UTILITY STANDARDS AND SPECIFICATIONS.

18. THE CONTRACTOR SHALL, TAKE REASONABLE MEASURES TO PROTECT EXISTING IMPROVEMENTS FROM DAMAGE AND ALL SUCH IMPROVEMENTS DAMAGED BY THE CONTRACTOR'S OPERATION SHALL BE REPAIRED OR RECONSTRUCTED TO THE ENGINEER'S SATISFACTION AT THE EXPENSE OF THE CONTRACTOR.

ALL OFFSITE AND ONSITE WATER AND SEWER FACILITIES UP TO WITHIN 5 FEET OF BUILDINGS SHALL BE CONSTRUCTED TO PUBLIC WORKS STANDARDS.

20. IF SEWER OR WATER LINES WITHIN THE PUBLIC UTILITY EASEMENTS REQUIRE REPAIRS, ALL SUCH REPAIRS WILL BE DONE IN ACCORDANCE WITH THE CITY OF HENDERSON'S UTILITY DEPARTMENT STANDARDS.

21. IF SIGNS ARE PRESENT ON THIS CONSTRUCTION SITE, PLEASE CONTACT THE SIGN COMPANY LISTED ON THE SIGN 24 HOURS PRIOR TO COMMENCING CONSTRUCTION IN THE SIGN'S LOCATION. CITY OWNED AND CITY SPONSORED SIGNS (KIOSKS) SHALL BE REMOVED AND REPLACED FOLLOWING CONSTRUCTION IN THEIR ORIGINAL LOCATION IN LIKE—NEW CONDITION AT CONSTRUCTION CONTRACTOR'S EXPENSE. ANY CONTRACTOR HAVING TO REMOVE A SIGN, WHICH WAS DAMAGED PRIOR TO THE CONTRACTOR OCCUPYING THE SITE, SHALL ARRANGE FOR VERIFICATION OF THE SIGN'S CONDITION BY A CITY INSPECTOR PRIOR TO REMOVAL. ALL SIGNS NOT PREVIOUSLY VERIFIED BY A CITY INSPECTOR SHALL BE ASSUMED TO BE IN LIKE-NEW CONDITION PRIOR TO REMOVAL.

22. THE CONTRACTOR SHOULD CONTACT THE NEVADA DIVISION OF ENVIRONMENTAL PROTECTION (NDEP) TO OBTAIN A NATIONAL POLLUTANT DISCHARCE ELIMINATION SYSTEM (NPDES) PERMIT PRIOR TO CONSTRUCTION. ALL CONSTRUCTION PROJECTS ONE ACRE OR LARGER MUST APPLY FOR THE PERMIT THROUGH THE NDEP. ALL QUESTIONS REGARDING THE NPDES PERMIT REQUIREMENTS SHOULD BE DIRECTED TO THE NDEP (775) 687–9429.

23. LOCATIONS OF UNDERGROUND UTILITIES SHOWN ON THE DRAWINGS WERE OBTAINED FROM INFORMATION RECEIVED FROM THE APPLICABLE UTILITY COMPANIES. CONTRACTOR SHALL CONTACT APPROPRIATE UTILITY COMPANY TO COORDINATE AND SCHEDULE ANY RELOCATIONS. NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR UTILITIES OR STRUCTURES NOT SHOWN, OR FOR UTILITIES OR STRUCTURES NOT SHOWN AT ACTUAL LOCATIONS ON THE DRAWINGS. EXISTING SERVICE LATERALS ARE NOT SHOWN ON THE DRAWINGS. CONTRACTOR TO VERIFY THE EXACT LOCATION OF UTILITIES PRIOR TO START OF CONSTRUCTION. THE CONTRACTOR'S RESPONSIBILITY REGARDING UTILITIES SHALL BE AS REQUIRED UNDER SECTION 107.17 OF THE UNIFORM STANDARD SPECIFICATIONS FOR CLARK COUNTY AREA, NEVADA AND AS PROVIDED IN THE

24. UNLESS OTHERWISE SHOWN ON THE CONTRACT DRAWINGS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OR RELOCATION OF ALL WATER SERVICES AND METERS WHICH INTERFERE WITH IMPROVEMENTS SHOWN ON THE CONTRACT DRAWINGS.

THE CONTRACTOR STALL DETERMINE THE CONTRACTOR AND UPTIT OF SOSTEDLED UTILITY INTERPRETACES, SHALL FURNISH INFORMATION ON THE SAME TO THE ENGINEER, NOT LESS THAN TEN (10) DAY PRIOR TO THE ANTICIPATED IMPACT OF THESE SUSPECTED INTERFREENCE'S ON HIS WORK, IF CONFLICTS EXIST, THE CONTRACTOR MILL IMMEDIATELY CONTRACTOR THE ENGINEER AND PROVIDE THE ENGINEER WITH ALT THE NECESSARY DATA SUCH AS FLEVATIONS, HORIZONTAL LOCATIONS, ETC., AND PROVIDE THE ENGINEER WITH SKETCHES INDICATING THE PROPOSED IMPROVEMENT AND THE UTILITY CONFLICT. THE ENGINEER WILL EXAMINE AND REVIEW ALL THE DATA AND SKETCHES PROVIDED, AND WILL PROVIDE THE CONTRACTOR WITH AN ALTERNATIVE DESIGN WITHIN FIVE (5) DAYS AFTER RECEIPT OF DATA AND SKETCHES.

ALL LENGTH OF STORM DRAIN AND SEWER PIPE IS MEASURED HORIZONTALLY FROM CENTER OF MANHOLE TO CENTER OF MANHOLE, UNLESS OTHERWISE NOTED.

### CITY OF HENDERSON STANDARD WATER NOTES

. NO WORK SHALL BEGIN UNTIL THE PLANS HAVE BEEN RELEASED FOR CONSTRUCTION BY THE CITY. FOLLOWING PLAN APPROVAL, A MINIMUM 48—HOUR NOTICE SHALL BE GIVEN TO THE CITY'S QUALITY CONTROL DIVISION PRIOR TO THE START OF CONSTRUCTION. NOTICE MUST BE GIVEN TO THE CITY NO LATER THAN 2:00 P.M. OF THE BUSINESS DAY PRIOR TO ANY REQUESTED INSPECTION, SUBSEQUENT TO THE START OF

CONSTRUCTION STANDARDS FOR POTABLE WATER SYSTEMS, INCLUDING THE CITY OF HENDERSON ADDENDUM. ALL MATERIALS UTILIZED SHALL CONFORM TO THE LATEST EDITION OF THE CITY'S APPROVED MATERIALS LIST.

A SINGLE WATER MAIN PIPE MATERIAL SHALL BE USED THROUGHOUT THE PROJECT, UNLESS OTHERWISE APPROVED BY THE CITY.

ALL WATER METER BOXES SHALL BE LOCATED OUTSIDE OF DRIVEWAY AREAS, UNLESS RECEIVING SPECIFIC PROJECT APPROVAL FOR THIS APPLICATION.

5. ALL VALVES SHALL BE LOCATED OUTSIDE OF DRIVEWAYS, VALLEY AND CURB GUTTERS.

ALL WATER MAIN APPURTENANCES SHALL BE LOCATED AS SHOW ON THE UDACS STANDARD PLATES. WHERE DISCREPANCIES EXIST BETWEEN THIS PLAN SET AND UDACS STANDARD PLATES, THE STANDARD PLATES SHALL APPLY.

14 GAUGE SOLID COPPER WIRE FOR LINE LOCATIONS SHALL BE REQUIRED UNDER ALL MAINS, ALL SERVICE LATERALS SIX (6) INCH DIAMETER AND LARGER, AND ANY SERVICE LATERAL NOT INSTALLED PERPENDICULAR TO THE MAIN.

ALL WATER METERS 2 INCHES AND SMALLER WILL BE SUPPLIED AND INSTALLED BY THE CITY OF HENDERSON. ALL WATER METERS 3 INCHES AND LARGER SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR.

ALL FLANGED DUCTILE IRON FITTINGS SHALL BE COATED WITH EC-244 AND WRAPPED WITH 120 MIL THICK POLYETHYLENE.

12. WATER METER BOXES THAT ARE INSTALLED WITHIN LANDSCAPED AREAS SHALL BE INSTALLED WITH REINFORCED CONCRETE COLLARS PER CLARK COUNTY AREA UNIFORM STANDARD DRAWING NUMBER 329.

13. NO OTHER UTILITY LINES MAY BE PLACED IN THE SAME TRENCH WITH WATER LINES.

14. BLUE REFLECTORS ARE REQUIRED AND MUST BE INSTALLED AT THE CENTERLINE OF THE NEAREST DRIVING LANE TO ALL FIRE HYDRANTS, AND MUST BE PERPENDICULAR TO THE HYDRANT.

ALL WATER MAINS INSTALLED ON ANY PROJECT SHALL BE A MINIMUM PRESSURE CLASS 150. THE MINIMUM TEST PRESSURE FOR ALL WATER MAINS IS 200 PSI.

ANY CONFLICT WITH EXISTING UTILITIES SHALL BE IMMEDIATELY CALLED TO THE ATTENTION OF THE ENGINEER.

17. UNLESS OTHERWISE APPROVED BY THE CITY, ALL PIPING 4 INCHES IN DIAMETER AND LARGER SHALL BE ETHER PVC C-900 OR DUCHLE IRON PIPE. ALL PIPING 2 INCHES IN DIAMETER AND LESS SHALL BE ETHER TUBE SIZE POLYETHYLENE PIPE OR TYPE K SOFT COPPER TUBING. NO 3-INCH PIPE SHALL BE USED WITHIN THE CITY FOR ANY DOMESTIC OR FIRE WIRE SERVICE.

18. LANDSCAPING AND IRRIGATION, ADJACENT TO WATER VAULTS, SHALL BE INSTALLED IN SUCH A MANNER WHEREBY IRRIGATION WATER DRAINS AWAY FROM THE VAULT. ALL VAULTS LOCATED BEHIND CURB OR SIDEWALK MUST BE BUILT WITH THE VAULT OPENING DESIGNED TO PROVIDE UNOBSTRUCTED ACCESS FROM THE CURB/STREET SIDE OF THE VAULT.

DISINFECTION AS REQUIRED BY THE UNIFORM DESIGN AND CONSTRUCTION STANDARDS FOR POTABLE WATER SYSTEMS.

20. THE CONTRACTOR SHALL BE ADVISED THAT WATER SERVICE TO EXISTING CUSTOMERS SHALL REMAIN IN SERVICE AT ALL TIMES DURING CONSTRUCTION. LINE STOPS MAY BE REQUIRED IN ORDER TO MAINTAIN SERVICE TO EXISTING CUSTOMERS, GIVEN THIS, THE CONTRACTOR SHALL PLAN ALL WORK ACCORDINGLY, HOWEVER, IF THE CITY HAS DETERMINED THAT SERVICE MUST BE DISRUPTED IN ORDER TO ACCOMPLISH THE PROPOSED WORK, THE CONTRACTOR SHALL FOLLOW THE CITY'S ESTABLISHED PROCEDURE FOR WATER MAIN SHUTDOWNS. CIRCUMSTANCES MAY ALSO REQUIRE TEMPORARY SERVICE FEED SHALL BE 100S BORNE BY THE CONTRACTOR, ANY TEMPORARY SERVICE FEEDS SHALL BE 100S BORNE BY THE CONTRACTOR, ANY TEMPORARY SERVICE FEED MUST RECEIVE SPECIFIC APPROVAL FROM THE CITY.

ALL VALVE BOXES, LIDS, MANHOLES AND APPURTENANCES SHALL BE BROUGHT TO WITHIN 1/8" TO 1/4" BELOW FINAL STREET GRADE.

### FIRE DEPARTMENT GENERAL NOTES

GENERAL:
ALL WORK SHALL BE DONE IN STRICT ACCORDANCE WITH THE UNIFORM FIRE CODE AS AMENDED AND THE UNIFORM DESIGN AND CONSTRUCTION STANDARDS AS ADOPTED BY THE CITY OF HENDERSON.

FIRE APPARATUS ACCESS ROADS AND FIRE HYDRANTS INSTALLED FOR FIRE PROTECTION SHALL BE INSTALLED AND MADE OPERATIONAL PRIOR TO AND DURING THE TIME OF CONSTRUCTION.

ACCESS TO BUILDINGS FOR THE PURPOSE OF FIRE EMERGENCIES SHALL BE PROVIDED. CONSTRUCTION MATERIAL SHALL NOT BLOCK FIRE LANES, ACCESS TO BUILDINGS, HYDRANTS OR FIRE APPLIANCES (THIS INCLUDES BLOCKING BY OPEN UTILITY TRENCHING).

PRIOR TO CLOSING ANY WATER SUPPLY CONTROL VALVE OR PLACING ANY FIRE HYDRANT OUT OF SERVICE CONTACT HENDERSON FIRE DEPARTMENT DISPATCH CENTER (267-4900 OPTION 0) AND ANY MONITORING FACILITY SUPERVISING THE CONTROL VALVE(S).

FIRE HYDRANTS:

1. FIRE HYDRANTS SHALL BE MAINTAINED IN AN OPERATIVE CONDITION WITH THE REQUIRED WATER SUPPLY. HYDRANTS SHALL BE MAINTAINED IN ACCORDANCE WITH NFPA 25.

MANUFACTURER AND MODEL OF FIRE HYDRANT SHALL BE APPROVED BY UTILITIES PRIOR TO INSTALLATION.

FIRE HYDRANTS SHALL BE CONSIDERED ACCEPTED FOR USE WHEN APPROVED BY PUBLIC WORKS - QUALITY CONTROL DIVISION.

ALL PUBLIC FIRE HYDRANTS SHALL HAVE A SIX DIGIT NUMBER (AS DESIGNATED BY UTILITY SERVICES) 267—2536) PAINTED ON THE BARREL BY THE HYDRANT INSTALLER. THE NUMBER SHALL BE IN 1" HIGH BLOCK NUMBERS USING BLACK ENAMEL PAINT. ALL NUMBERS SHALL MATCH MORDERS USING BLACK ENAMEL PAINT. ALL NUMBERS SHALL MATCH MORDERS USING BLACK ENAMEL PAINT.

<u>FIRE DEPARTMENT CONNECTIONS (FDC):</u>
10. SHALL BE LOCATED WITHIN 100 FEET OF A FIRE HYDRANT AS MEASURED BY AN APPROVED UNOBSTRUCTED ROUTE.

. SHALL FACE THE FIRE LANE.

UNDERGROUND PIPING & VALVES:

3. WHEN UNDERGROUND PIPING CAN BE SUPPLIED OR PRESSURIZED BY A FIRE DEPARTMENT CONNECTION (FDC), THE UNDERGROUND PIPING SHALL BE DESIGNED TO WITHSTAND A WORKING PRESSURE OF NOT LESS THAN 175 PSI

. ALL SECTIONAL CONTROL VALVES CONTROLLING WATER SUPPLIES ON PRIVATE FIRE SERVICE MAINS SHALL BE USTED POST INDICATING VALVES (PIV). (THIS SHALL INCLUDE PRIVATE FIRE SERVICE MAINS WHICH ONLY SERVE FIRE HYDRANTS.

5. A POST INDICATING VALVE (PIV) SHALL BE PROVIDED AND INSTALLED A MINIMUM OF 5 FEET FROM THE BUILDING FOR ALL FIRE SPRINKLER SYSTEMS AND SHALL BE SET SO THE TOP OF THE POST WILL BE 36" ABOVE THE FINAL GRADE.

. ALL VALVES THAT CONTROL THE WATER SUPPLY TO PRIVATE FIRE SERVICE MAINS AND/OR FIRE SPRINKLER SYSTEMS SHALL BE USTED, INDICATING AND ELECTRICALLY SUPERVISED. THIS INCLUDES ALL VALVES STARTING FROM THE BACKFLOW ASSEMBLIES UNTIL THE WATER LINE ENTERS THE BUILDING. EXCEPTION 1: LISTED STREET VALVES WITH APPROVED DEBRIS "LOCKOUT"

EXCEPTION 2: DCDA'S THAT ARE CHAINED AND LOCKED (WITH AN APPROVED KNOX OR BREAK-AWAY LOCK) IN THE OPEN POSITION

. ALL PIPING AND VALVES SUPPLYING FIRE SPRINKLER SYSTEMS SHALL PROTECTED FROM FREEZING WHEN EXPOSED TO TEMPERATURES LESS 40F. FREEZE PROTECTION SHALL BE APPROVED, DURABLE AND PERM

18. ALL BACKFLOW OR CROSS CONNECTION REQUIREMENTS OF THE PUB WORKS UTILITY DIVISION SHALL BE INSTALLED UPSTREAM OF THE FI SPRINKLER OR STANDPIPE SYSTEM "POST INDICATOR VALVE".

19. ALL REQUIRED TESTING AND FLUSHING OF THE UNDERGROUND FIRE SPRINKLER/STANDPIPE WATER SUPPLY PIPING SHALL BE PERFORMED IN THE PRESENCE OF (QC) QUALITY CONTROL (267–3100). THE INSTALLING CONTRACTOR SHALL FURNISH A "CONTRACTOR'S MATERIAL AND TESTING CERTIFICATE" (CALÉT) COUNTERSIGNED BY THE PROPERTY OWNER OR REPRESENTATIVE. THE CMÁT SHALL BE FILLED QUI COMPLETELY WITH THE QC'S INITIALS, WITNESSING EACH TEST. A COPY OF THE UNDERGROUND FLUSH AND HYDROSTATIC TESTING DOCUMENTATION SHALL BE GON-SITE AND SIGNED BY THE AND PRIOR TO THE CONNECTION OF THE UNDERGROUND WATER SUPPLY TO THE FIRE SPRINKLER SYSTEM.

GATES:
20. SHOP DRAWINGS FOR ALL GATES AND MOTORIZED OPENERS OBSTRUCTING FIRE DEPARTMENT ACCESS ROADS SHALL BE SUBMITTED SEPARATELY FOR REVIEW AND RECEIVE APPROVAL PRIOR TO INSTALLATION.

### CITY OF HENDERSON SEWER NOTES

ALL CONSTRUCTION AND MATERIALS SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE DESIGN & CONSTRUCTION STANDARDS FOR WASTEWATER COLLECTION SYSTEMS AND THE UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFF—SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA, AS AMENDED. IN ALL CASES, THESE STANDARDS SHALL SUPERSEDE THE UNIFORM STANDARD SPECIFICATIONS. IT WILL BE THE RESPONSIBILITY OF THE CONTRACTOR TO BE AWARE OF THE CONTRACTOR TO MATERIALS UTILIZED SHALL CONFORM TO THE LATEST EDITION OF THE CITY'S APPROVED MATERIALS LIST.

IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PERFORM CONSTRUCTION PER PLANS. ANY ADDITIONS, DELETIONS, OR CHANGES SHALL FIRST MEET WITH THE APPROVAL OF THE CITY OF HENDERSON.

ALL EXFILTRATION, INFILTRATION, AIR TESTING AND TELEVISING OF LINES SHALL BE IN ACCORDANCE WITH THE DESIGN & CONSTRUCTION STANDARDS FOR WASTEWATER COLLECTION SYSTEMS.

CUT SHEETS MUST BE SUBMITTED TO THE AGENCY BEFORE CONSTRUCTION WILL BE PERMITTED TO START.

7. ALL CONTRACTORS INSTALLING SEWER MAINS THAT WILL BE UNDER THE JURISDICTION OF THE CITY OF HENDERSON MUST BE CLASS "A" CONTRACTORS.

ALL HOUSE SEWER LATERALS SHALL BE LAID TO A MINIMUM 2 PERCENT SLOPE AND SHALL CONFORM TO ALL STANDARDS FOR CONSTRUCTION OF OFFSITE IMPROVEMENTS IN THE CLARK COUNTY AREA, UNLESS RECEIVING SPECIFIC PROJECT APPROVAL.

ALL SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED WITH 24—HOUR, SEVEN DAY A WEEK, ALL—WEATHER DRIVE ACCESS TO ACCOMMODATE SEWE MAINTENANCE VEHICLES. THIS INCLUDES A 12—FOOT WIDE ACCESS ROAD WITH A MINIMUM 50—FOOT INSIDE TURNING RADIUS.

10. THE CONTRACTOR IS REQUIRED TO MAINTAIN ACCESS, AS DESCRIBED IN NOTE 9, TO ALL LIVE SEWER MANHOLES DURING CONSTRUCTION. FAILURE TO DO SO MAY RESULT IN THE PROJECT BEING SHUT DOWN UNTIL SUCH ACCESS IS PROVIDED.

11. ALL SEWER MAINS BEING CONSTRUCTED SHALL BE PLUGGED AT THE POINT OF CONNECTION TO THE EXISTING SEWER SYSTEM. THIS PLUG SHALL REMAIN IN PLACE UNTIL ALL FINAL ACCEPTANCE PROCEDURES ARE COMPLETE.

12. ALL MANHOLES UNDER CONSTRUCTION SHALL HAVE PLYWOOD PLACED IN THE BASE TO STOP DEBRIS FROM GETTING INTO THE SEWER MAIN. ALL PLYWOOD SHALL BE REMOVED BEFORE CLEANING AND ACCEPTANCE.

14. ANY SEWER MANHOLE LINING SYSTEM SHALL ONLY BE INSTALLED AFTER ALL FINAL GRADE ADJUSTMENTS ARE COMPLETE FOR THAT MANHOLE.

A SINGLE TYPE OF PIPE MATERIAL SHALL BE USED FROM MANHOLE TO MANHOLE. A CHANGE IN SEWER MAIN PIPE MATERIAL OR PIPE SIZE SHALL ONLY OCCUR AT A MANHOLE.

### CITY OF HENDERSON TRAFFIC NOTES

ANY EXISTING TRAFFIC CONTROL DEVICES AND/OR SIGNS SHALL BE MAINTAINED DURING THE PERIOD OF CONSTRUCTION AND SHALL BE REPOSITIONED, AS REQUIRED, PER M.U.T.C.D. AND CITY STANDARDS, UPON COMPLETION OF THE PROJECT.

CONTRACTORS ARE RESPONSIBLE FOR SUBMITTING TRAFFIC CONTROL AND BARRICADING CONTRACTORS ARE RESPONSIBLE FOR SUBMITING TRAFFIC CONTROL AND BARRICADING PLANS NOT LESS THAN THREE (3) WORKING DAYS BEFORE OBSTRUCTING AND BEGINNING OF CONSTRUCTION WITHIN THE PUBLIC RIGHT OF WAY, INCLUDING SIDEWALKS. BEFORE ANY WORK IS STARTED IN THE RIGHT OF WAY, THE CONTRACTOR WILL INSTALL ALL ADVANCE WARRING SIGNS FOR THE CONSTRUCTION ZONE. THE CONTRACTOR WILL INSTALL ALL ADVANCE WARRING SIGNS FOR THE CONSTRUCTION ZONE. THE CONTRACTOR WILL INSTALL TEMPORARY GROUND MOUNTED STOP SIGNS AT ALL NEW STREET ENCROACHMENTS INTO EXISTING CITY STREETS IMMEDIATELY AFTER FIRST GRADING WORK IS ACCOMPLISHED, AND WILL MAINTAIN SAD SIGNS UNTIL PERMANENT SIGNS ARE

LOCATION AND DESCRIPTION OF NEW AND EXISTING TRAFFIC CONTROL DEVICES, STREET STRIPING, MEDIAN ISLANDS, DRIVEWAY'S AND TRAFFIC SIGNALS MUST BE SHOWN ON PLANS SUBMITTED TO THE CITY FOR APPROVAL. ALL NEW TRAFFIC SIGNS WILL BE FABRICATED WITH DIAMOND GRADE VIP (CLASS 6) REFLECTIVE SHEETING. ALL NEW TRAFFIC SIGNS, EXCEPT STREET NAME SIGNS, WILL HAVE "F-CAL" OR 3M SERIES 1160 OR APPROVED EQUIVALENT ANTI-GRAFFITI PROTECTIVE FILM.

LOCATION AND DESCRIPTION OF NEW AND EXISTING STREET NAME SIGNS MUST BE SHOWN ON PLANS SUBMITTED TO THE CITY FOR APPROVAL. STREET NAME SIGNS WILL COMPLY WITH CLARK COUNTY AREA UNIFORM STANDARD DRAWINGS NO. 249, 250 AND 251. ALL STREET NAME SIGNS WILL BE FABRICATED WITH DIAMOND GRADE VIP (CLASS 6) REFLECTIVE SHEETING. ALL INTERSECTIONS WITH 100 FOOT OR GREATER RIGHT WAY ROADWAYS WILL HAVE THE CITY OF HENDERSON LOGO ON BOTH STREET NAMI PANELS. CONTACT CITY OF HENDERSON TRAFFIC SERVICES MAINTENANCE THREE (3)
WORKING DAYS IN ADVANCE, MONDAY THROUGH THURSDAY, AT 267–3200 TO RECEIVE
LOGO TO BE APPLIED BY THE CONTRACTOR TO THE STREET NAME PANELS PER CITY OF
HENDERSON STANDARD DETAIL. PRIVATE STREETS SHALL HAVE BROWN BACKGROUND.

BLUE REFLECTORIZED PAVEMENT MARKINGS MUST BE INSTALLED AND CURB MUST BE PAINTED AT EVERY FIRE HYDRANT LOCATION PER CITY OF HENDERSON FIRE DEPARTMENT STANDARDS.

ALL CONSTRUCTION SIGNING, BARRICADING AND PAVEMENT MARKINGS WILL CONFORM TO THE MEVADA WORK ZONE TRAFFIC CONTROL HANDBOOK — 1986 AND TO THE CURRENT EDITION OF THE MUTCO, WITH ANY ADDRINAS AND REVISIONS.

WHERE STREETS END AT THE PROJECT BOUNDARY, THREE (3) 18-INCH DIAMOND (MINIMUM), REFLECTORIZED, RED PARLES SHALL BE INSTALLED AT THE END OF THE ROADWAY AND MAINTAINED UNTIL ADJOINING PROJECT IS BUILT.

IF THE IMPROVEMENTS NECESSITATE THE OBLITERATION, TEMPORARY OBSTRUCTION, TEMPORARY REMOVAL, OR RELOCATION OF ANY EXISTING TRAFFIC PAYEMENT MARKING, SUCH PAYEMENT MARKING WILL BE RESTORED OR REPLACED WITH LIKE MATERIALS TO THE SATISFACTION OF THE CITY TRAFFIC ENGINEER.

THE FREEWAY AND ARTERIAL SYSTEM OF TRANSPORTATION (F.A.S.T.) MAY HAVE UNDERGROUND FACILITES IN THE AREA. THE CONTRACTOR SHALL BE RESPONSIBLE FOI LOCATING AND PROTECTING ALL FAST INFRASTRUCTURE ON ROADWAYS WITH RIGHT OF WAYS OF 80' AND GREATER. CONTACT F.A.S.T. AT (702) 432—5300, 72 HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITIES IN THE AREA OF THEIR FACILITIES. FAST INTERCONNECT POLICY IS IN EFFECT. INTERCONNECT CABLE MUST BE MAINTAINED AT ALL TIMES. DAMAGES WILL BE ASSESSED AFTER 24 HOURS HAS ELAPSED FROM TIME OF BREAK OR DAMAGE PER FAST AND RTC REQUIREMENTS.

### **BASIS OF BEARINGS**

BASIS OF BEARINGS: NORTH 00"15"25" WEST, BEING THE BEARING OF THE EAST LINE OF THE NORTHEAST QUARTER (NE 1/4) OF THE NORTHEAST QUARTER (NE 1/4) OF SECTION 9, TOWNSHIP 22 SOUTH, RANGE 63 EAST, M.D.M., AS SHOWN ON CONSTRUCTION DRAWINGS FOR THE "NORTHEAST C-1 DETENTION BASIN" CURRENTLY UNDER REVIEW BY THE CITY OF HENDERSON. SURVEY CONTROL PLAN 1, DRAWING NO. G-4, SHEET 4.

### BENCHMARK

PROJECT BENCHMARK: CITY OF HENDERSON BENCHMARK No. 506 A CITY OF HENDERSON 2" BRASS CAP IN A MONUMENT WELL AT THE INTERSECTION OF RACETRACK ROAD AND ITHACA AVENUE. NAVD 88 DATUM: 571.435 METERS / 1874.783 US SURVEY FEET

### APPROXIMATE ONLY. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE EXACT HORIZONTAL AND VERTICAL LOCATION OF ALL EXISTING

DISCLAIMER NOTE

VERTICAL LOCATION OF ALL EXISTING UNDERGROUND AND OVERHEAD UTILITIES PRIOR TO COMMENCING CONSTRUCTION. NO REPRESENTATION IS MADE THAT ALL EXISTING UTILITIES AND SHOWN HEREON. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR UTILITIES NOT SHOWN OR UTILITIES NOT SHOWN IN THEIR PROPER LOCATION.

CHECKED BY:

Avoid cutting underground utility lines. It's costly. Call before you Dig. 1-800-227-2600 UNDERGROUND SERVICE (USA)

### **GENERAL STRUCTURAL NOTES**

CONCRETE: ALL CONCRETE SHALL BE USING TYPE V CEMENT PER ASTM C-150, MODIFIED CLASS D (MAJOR) CONCRETE WITH 3/4" AGGREGATES. EXCEPT FOR CONCRETE USED IN CHANNEL OR BOX CULVERT INVERT, THE AGGREGATE SHALL BE 1 ½ INCHES.

ALL CONCRETE SHALL HAVE A 4"± SLUMP WITHOUT PLASTICIZERS AND 6"± SLUMP WHEN PLASTICIZERS ARE USED.

ALL EXPOSED CORNERS SHALL BE BEVELED 3/4" UNLESS OTHERWISE NOTED.

3. SIRUCTURAL SIEEL: ALL WIDE FLANGE SIEEL SHALL CONFORM TO ASTM A992 (FY = 50 KS)). ALL PIPE STEEL SHALL CONFORM TO ASTM A53, TYPE E OR S, GRADE B (FY = 35 KS). ALL HOLLOW STRUCTURAL SECTIONS (HSS) SHALL CONFORM TO ASTM A500 GRADE B (FY = 46 KS). ALL OTHER STANDARD STRUCTURAL STEEL SHAPES, ROLLED SECTIONS, BARS, AND PLATES SHALL CONFORM TO ASTM A36 (FY = 35 K°C).

4. WELDING: WELDING SHALL BE BY WELDERS HOLDING CURRENT VALID CERTIFICATES AND HAVING EXPERIENCE IN THE TYPE OF WELDS SHOWN ON THE DRAWINGS AND NOTES. ALL WELDS SHALL HAVE A MINIMUM TENSILE STERRICHT OF 70 KES UNLESS NOTED OTHERWISE. ALL WELDING SHALL BE PER THE LATEST AMERICAN WELDING SOCIETY STANDARDS. ALL WELDS ON DRAWINGS ARE SHOWN AS SHOP WELDS. CONTRACTOR MAY SHOP WELD OR FIELD WELD AT HIS DISCRETION.

BEDDING MATERIAL: BEDDING MATERIAL SHALL BE 6" OF CLARK COUNTY TYPE II AGGREGATE. THE BEDDING LAYER SHALL BE COMPACTED TO AT LEAST 95 PERCENT OF THE MAXIMUM DRY DENSITY AS ESTABLISHED BY ASTM TEST METHOD D-1557.

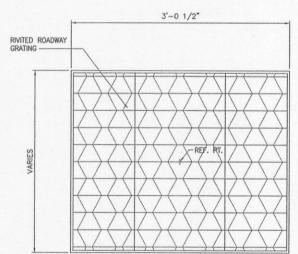

GALVANIZING: ALL EXPOSED METAL PARTS SHALL BE HOT-DIP GALVANIZED AFTER FABRICATION AND ALL GALVANIZING DAMAGED BY FABRICATION OR INSTALLATION SHALL RECENE TWO COATS OF AJUNINUM PAINT (GALVONIX OR EQUAL).

8. EPOXY: HILTI HIT-RE 500-SD (ICC ESR-2322). INSTALL PER ICC REPORT AND

### **GENERAL NOTES:**

- 1. DESIGN SPECIFICATIONS: AASHTO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 2002". REINFORCED CONCRETE BASED ON LOAD FACTOR DESIGN.
- CONCRETE: ALL CONCRETE SHALL BE CLASS D WITH A MINIMUM ULTIMATE COMPRESSIVE STRENGTH f'c=4500psi AT 28 DAYS. ALL CONCRETE SHALL BE MADE USING TYPE V CEMENT. ALL EXPOSED CORNERS SHALL BE BEVELED 3/4" UNLESS OTHERWISE NOTED.
- 3. <u>REINFORCING STEEL</u>: ALL REINFORCING STEEL SHALL BE ASTM A615, GRADE 60. DIMENSIONS ARE FROM OUT TO OUT OF BARS. MINIMUM CLEARANCE TO REINFORCING STEEL SHALL BE 2" UNLESS OTHERWISE NOTED. HOOKS MAY BE ROTATED OR TILTED AS NECESSARY TO PROVIDE PROPER CLEARANCES.
- 4. MAXIMUM ALLOWABLE CONSTRUCTION WHEEL LOAD = 4.0 TONS.
- 5. GEOTECHNICAL REPORT: WESTERN TECHNOLOGIES INC.
  DATE: JANUARY 3, 2006
  ALLOWABLE SOIL PRESSURE = 3000 psf
  PLUS 1/3 FOR WIND OR SEISMIC LOADS
  FRICTION COEFFICIENT = 0.35
  PASSIVE PRESSURE = 300 psf/ft

### BWC CONSTRUCTION NOTES

1. CONTRACTOR SHALL FIELD LOCATE AND PROTECT ALL BWC APPURTENANCES INCLUDING, BUT NOT LIMITED TO AV/AR, ACCESS MANWAYS. ALL ABOVE GROUND STRUCTURES AND AT GRACE STRUCTURES MUST BE ADJUSTED TO NEW GRADE AT CONTRACTOR'S EXPENSE. RECIPIERS AND AV/AR'S MUST BE RELOCATED TO THE SIDEWALK PER BWC STANDARDS AND AT THE CONTRACTOR'S EXPENSE. CONTRACTOR TO NOTIFY BASIC WATER COMPANY AT (702) 567—0464 OR (702) 429—8971 AT LEAST 48 HOURS PRIOR TO CONSTRUCTION ACTIVITY.

Writer's Contact Information: (702) 804-2011

Ms. Sara DeGroot LOMC Clearinghouse 6730 Santa Barbara Court Elkridge, MD 21075

Re: Additional Data Required to Support a Letter of Map Revision (LOMR),

Case No. 10-09-2495P

Dear Ms. DeGroot:

Per your letter dated May 26, 2010, additional data is required to complete the review of LOMR Case No. 10-09-2495P. At your request, the following items are provided to facilitate your review:

- 1. Topographic work maps, certified by a registered professional engineer, containing relevant items listed on Page 2, Section C, of the "Riverine Hydrology & Hydraulics Form".
- Post-project conditions HEC-1 models, digital and paper copies.
- 3. Post-project conditions HEC-RAS and WSPG models, digital and paper copies.

The topographic work maps for the Northeast C-1 Detention Basin and Outfall have been updated to include the project benchmarks, elevation reference markers where available, and the engineer's seal and signature. The work maps for the Drake Channel were generated from design drawings prepared by other engineers. Research was performed and documentation indicating the vertical datum is provided with the design drawings. The work maps generated from Carter Burgess plans are on the NAVD 88 datum; those generated from the Summit plans are on the NGVD 29 datum. GC Wallace engineer seals on the Drake Channel work maps validate the hydraulic results presented with the Northeast C-1 Detention Basin project only. The technical information shown on the work maps have not changed from that submitted with the CLOMR (Case No. 08-09-0093R).

As stated in the original LOMR submittal, the calculations supporting the approved CLOMR have not changed; the hydrologic and hydraulic models provided are taken from the CLOMR and response to comments on the CLOMR. A copy of the MT-2 Forms from the CLOMR is also provided for your convenience.

I certify that the drainage improvements shown on the submitted work maps conform to the design drawings titled "Northeast C-1 Detention Basin" and "Northeast C-1 Detention Basin Outfall", included with the original LOMR submittal. The proposed floodplain mapping shown on the work maps are based on the results from the hydraulic models. A site investigation confirmed that the flood-control structures were built in substantial conformance with the previously mentioned design drawings.

If you have any questions or need additional information, please contact me at (702) 804-2011.

Cordially,

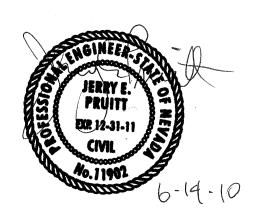

G. C. WALLACE, INC.

Jerry E. Pruitt, PE Senior Vice President Flood Control Division

JP/dy/vlr

### **Enclosures**

May 26, 2010

Mr. Jerry E. Pruitt, P.E. Senior Vice President Flood Control Division G.C. Wallace, Inc. 1555 South Rainbow Boulevard Las Vegas, NV 89146 IN REPLY REFER TO: Case No.: 10-09-2495P

Communities: City of Henderson and

Clark County, NV

Community Nos.: 320005 and 320003

316-AD

Dear Mr. Pruitt:

This responds to your request dated May 13, 2010, that the Department of Homeland Security's Federal Emergency Management Agency (FEMA) issue a revision to the Flood Insurance Rate Map (FIRM) for Clark County, Nevada and Incorporated Areas. Pertinent information about the request is listed below.

Identifier:

Northeast C1 Detention Basin

Flooding Source:

Unnamed Tributary 1 to C-1 Channel and Unnamed Tributary 2 to C-1 Channel

FIRM Panel(s) Affected:

32003C2615E and 2620E

The data required to complete our review, which must be submitted within 90 days of the date of this letter, are listed on the enclosed summary.

If we do not receive the required data within 90 days, we will suspend our processing of your request. Any data submitted after 90 days will be treated as an original submittal and will be subject to all submittal/payment procedures, including the flat review and processing fee for requests of this type established by the current fee schedule. A copy of the notice summarizing the current fee schedule, which was published in the *Federal Register*, is enclosed for your information.

FEMA receives a very large volume of requests and cannot maintain inactive requests for an indefinite period of time. Therefore, we are unable to grant extensions for the submission of required data for revision requests. If a requester is informed by letter that additional data are required to complete our review of a request, the data **must** be submitted within 90 days of the date of the letter. Any fees already paid will be forfeited for any request for which the requested data are not received within 90 days.

LOMC Clearinghouse, 6730 Santa Barbara Court, Elkridge, MD 21075 PH: 1-877-FEMA MAP

If you have general questions about your request, FEMA policy, or the National Flood Insurance Program, please call the FEMA Map Information eXchange (FMIX), toll free, at 1-877-FEMA MAP (1-877-336-2627). If you have specific questions concerning your request, please contact your case reviewer, Ms. Sara DeGroot, by e-mail at sdegroot@mbakercorp.com or by telephone at (571) 357-6029, or the Revisions Coordinator for your request, Ms. Shilpa Mulik, CFM, at smulik@mbakercorp.com or at (703) 317-6255.

Sincerely,

Syed Qayum, CFM

### Summary of Additional Data Required to Support a Letter of Map Revision (LOMR)

Case No.: 10-09-2495P

Requester: Mr. Jerry E. Pruitt, P.E.

Communities: City of Henderson and

Community Nos.: 320005 and 320003

Clark County, NV

The issues listed below must be addressed before we can continue the review of your request.

- 1. Please provide a topographic work map, certified by a registered professional engineer, for the entire requested area of revision that reflects all applicable items listed on page 2, Section C, of Application/Certification Form 2, entitled "Riverine Hydrology & Hydraulics Form." Please show this information on a map of suitable scale and topographic definition to provide reasonable accuracy. All items should be labeled for easy cross-referencing to the submitted existing conditions hydraulic models. Please ensure that the topographic maps are referenced to the North American Vertical Datum of 1988 (NAVD).
- 2. The submitted application did not include the post-project conditions HEC-1 hydrologic model. Please submit paper and digital copies of the post-project conditions HEC-1 hydrologic model to support the discharges used in the hydraulic analyses.
- 3. The submitted application did not include the post-project conditions HEC-RAS and WSPGW hydraulic models. Please submit paper and digital copies of the post-project conditions HEC-RAS and WSPGW hydraulic models for the area of revision.

Please send the required data and/or fee directly to us at the address shown at the bottom of this page. For identification purposes, please include the case number referenced above on all correspondence.

### LIST OF TABLES

TABLE 1 - Storm Flow Summary (SDN3) TABLE 2 - Storm Flow Summary (SDN3-5)

### DRAFT C-1 Channel System FIS Restudy

of the SFHA Zone A in C1G2B1. The lower half of Reach 4 (cross sections 1-12) shows flows depths greater than 1-foot, with velocities ranging from 4.3 to 7.3 fps, and a flow rate of 490 to 799 cfs (10% bulked). The SFHA Zone A was redefined based on the 100-year water surface elevations, but not entirely removed.

### Section 3.3 Vertical Datum

All base flood elevations shown in the FIS Restudy have been referenced to NAVD88. Because the community and some of the as-built information utilized was referenced to NGVD29, a vertical adjustment factor of 1.86 feet and 2.31 feet, was applied to NGVD29 elevations at various locations. Survey notes and electronic files are located in Section 5, Volume IV.

# ) \*

### Section 3.4

### **Sedimentation Analysis**

Prior to the placement of flood control facilities the C-1 system comprised a typical alluvial watershed found in the arid southwest. Storm runoff flowed north and west from the McCullough Range and River Mountains to form alluvial bajadas that coalesced in the vicinity of the present C-1 Channel. Converging contours forming a continuous low point along the present day C-1 Channel that can still be seen under the existing, developed watershed.

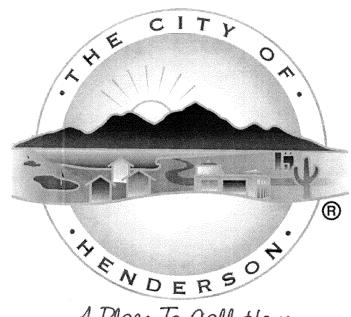

The lithology of the River Mountains and McCullough Range contributes to sediment laden runoff that forms the alluvial depositional surface. The River Mountains generally consist of a reddish-orange volcanic rock (dacite) supporting little or no vegetation, whereas the McCullough Range consists (generally) of a black volcanic rock (basalt) also supporting little or no vegetation. Both mountain ranges provide sediment laden silt, sands, and gravels transported downstream as both wash load and bed load. A normal fault of tectonic origin—typical of the basin and range physiographic province—strikes north-south along the base of the River Mountains forming a mountain block escarpment. This escarpment—combined with a sediment laden watershed—forms the basis of the River Mountain alluvial fan and bajada.

Superimposed on the River Mountain—McCullough Range alluvial system are flood control facilities that greatly diminish sediment transport, truncating the alluvial depositional environment. Facilities that act as barriers to sediment transport include the:

- Black Mountain (Southwest C-1) Detention Basin
- Mission Hills Western Interceptor
- Mission Hills Detention Basin
- Equestrian Detention Basin
- Equestrian Levee
- East C-1 Detention Basin
- East C-1 Levee

Sediment transport analysis has been performed for the Mission Hills and Equestrian System, and the Black Mountain (Southwest C-1) and East C-1 Detention Basins. These analyses are made a part of this study as supporting documentation to this

## CONSTRUCTION PLANS

FOR

## DRAKE CHANNEL CULVERT OF RACETRACK ROAD

#### CITY OF HENDERSON GENERAL NOTES:

ALL CONSTRUCTION SHALL CONFORM TO THE "UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFF-SITE IMPROVEMENTS CLARK COUNTY AREA, REVADA, 1993," AND THE "UNIFORM STANDARD DRAWINGS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA 1988."

APPLICATION FOR INSPECTION BY THE CITY OF HENDERSON PUBLIC WORKS SHALL BE MADE BY THE CONTRACTOR AT LEAST 24 HOURS BEFORE THE INSPECTION SERVICES WILL BE REQUIRED BY CALLING 555–2136 OR 565–2140.

3) WORK IN PUBLIC STREETS, ONCE BEGUN, SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT PROPERTY OWNERS AND TO THE TRAVELING PUBLIC.

4) THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTES FROM ANY AND ALL DAMAGE THAT MAY OCCUR FROM STORM MATER PANOPE AND/OR DEPOSITION OF DEBRIS RESULTING FROM ANY AND ALL WORK IN CONNECTION WITH SUBDIVISION CONSTRUCTION.

5) PRIOR TO FINAL ACCEPTANCE, BIND RELEASES, AND A CERTIFICATE OF OCCUPANCY, A CERTIFIED LEGALE AS-BUILT DIVANIGA USES IN SUMMITTED TO THE OTY OF A CERTIFIED LEGALE AS-BUILT DIVANIGA USES IN SUMMITTED TO THE OTY OF A CERTIFIED LEGALE AS A CONTROL OF A CERTIFIED ASSOCIATION OF A CERTIFIED ASSOCIATION OF A CERTIFIED AS SUCH BY THE EXCURED STATING "INSTALLED AS PER DRAWINGS" AND CERTIFIED AS SUCH BY THE DEVLOCATION OF ANOTHER.

6) APPROVAL OF THESE PLANS IS FOR OFF-SITE IMPROVEMENTS ONLY. ALL ON-SITE IMPROVEMENTS, AS DEFINED BY THE CITY OF HENDERSON, INCLUDING BLOCK WALLS, MUST BE APPROVED BY THE BUILDING AND PLANNING DIVISIONS OF THE CITY OF HENDERSON.

7) CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSTION BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINGE AND INGERSES AND EGRESS TO SAID CONSTRUCTION. EXTENT OF TRANSTIONS TO BE DETERMINED BY THE CITY EMGINEER.

8) EXISTING UTILITIES ARE LOCATED ON PLANS FOR THE CONVENIENCE OF THE CONTRACTOR ONLY. THE CONTRACTOR SHALL BEAR FULL RESPONSIBILITY FOR THE PROTECTION OF UTILITIES AND THE CHOINCER BEARS NO RESPONSIBILITY FOR UTILITIES NOT SHOWN ON THE PLANS. THIS INCLUDES ALL SERVICE LATERALS OF ANY KIND.

10) WHEELCHAIR RAMPS SHALL BE CONSTRUCTED IN EACH QUADRANT OF AN INTERSECTION PER STANDARD DRAWING 235. EXACT LOCATION OF THE RAMPS SHALL BE DETERMINED BY A CITY OF HENDERSON INSPECTOR, OR AS SHOWN ON THE PLANS.

11) CURB AND GUTTER WITH A GRADE OF LESS THAN FOUR TENTHS OF ONE PERCENT SHALL BE CONSTRUCTED BY FORMING. EACH JOINT SHALL BE CHECKED FOR GRADE PRICE TO CONSTRUCTION AND WATER TESTED AS SOON AS POSSIBLE AFTER

12) ALL GRADING SHALL CONFORM TO THE FOLLOWING SOILS REPORT:

ENGINEER: CONVERSE CONSULTANTS SOUTHWEST DATE: JULY 24, 1987 PROJECT NO.: 87-33282-01

14) ALL STREET STRUCTURAL SECTIONS SHALL BE PER THE RECOMMENDATIONS OF THE SOILS ENGINEER, BASED ON COR OR R-VALUES. NO PAYING OR BASE WORK SHALL COMMENCE UNTIL A STREET STRUCTURAL SECTION IS APPROVED BY THE CITY ENGINEER, CITY OF HENDERSON.

LIT OF HANDLESON.

19 BEFORE ANY MORK IS STARTED IN THE MONT-OF-WAY, THE CONTRACTOR SHALL

19 BEFORE ANY MORK IS STARTED IN THE MONT-OF-WAY, THE CONTRACTOR SHALL

CONTRACTOR SHALL INSTALL THE WORDARY STOP SIGNS AT ALL NEW STREET

CONTRACTOR SHALL INSTALL THE WORDARY STOP SIGNS AT ALL NEW STREET

CONTRACTOR SHALL INSTALL THE WORDARY STOP SIGNS AT ALL NEW STREET

CHARGING WORK IS ACCOUNTEDED AND SHALL MAINTAIN SHAD SIGNS UNTIL PERMANENT

CHARGING SHALL CONTROM TO THE NYMAD THAT CONTRACT MAINTAIN CHARGING

EDITION AND TO THE NYMAD THAT CONTROL DEVOSTS CHARGINT EDITION AND THE CITY OF INSTANCES OF STREET STOP SHALL THE CONTROL DEVOSTS CHARGINT EDITION AND THE CITY OF INSTANCES OF STREET STATES.

16) WHERE EXISTING PAVEMENT IS CUT TO INSTALL, UTILITY SERVICE, LINES, BACKFILL, AND PAVEMENT REPLACEMENT SHALL, BE DONE PER STANDARD DRAWING 502 AND SECTION 206, 207, AND 208 OF THE "STANDARD SPECIFICATION ISSUE, 1993".

17) ALL STATIONING IS REFERENCED TO CENTERLINE.

18) EXACT LOCATION OF ALL SAWCUT LINES SHALL BE DETERMINED IN THE FIELD BY A CITY OF HENDERSON INSPECTOR.

19) PROTECTION AND REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES NOT DELINEATED ON THE CONTRACTOR'S RESPONSIBILITY. REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES SHALL BE DONE TO THE CITY OF HONDERSON SURVEY SECTION'S SATISFACTION.

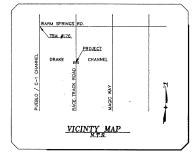

20) AFFECTED UTILITY COMPANIES SHALL BE NOTIFIED AT LEAST TWO (2) WORKING DAYS PRIOR TO COMMENCEMENT OF CONSTRUCTION.

21) CALL BEFORE YOU DIG, 1-800-227-2800.

22) MODIFICATIONS TO EXISTING UTILITIES SHALL CONFORM TO THE OWNER'S STANDARDS AND SPECIFICATIONS.

23) THE CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING 20) THE CONTRACTOR SHALL FIRST TRANSPORT THE REASONES TO PROTECT EXISTING IMPROVEMENTS FROM DAMAGE. ALL SUCH IMPROVEMENTS DAMAGED BY THE CONTRACTOR'S OPERATION SHALL BE REPAIRED OR RECONSTRUCTED TO THE ENGINEER'S SATISFACTION AT THE EXPENSE OF THE CONTRACTOR.

24) CITY APPROVAL OF THE IMPROVEMENT PLANS IS GRANTED FOR ONE (1) YEAR ONLY. PLANS MUST BE RESUBMITTED FOR REVIEW AND APPROVAL TO THE DEPARTMENT OF PUBLIC WORKS, CITY OF HENDERSON, IF WORK IS NOT COMPLETED BY THE DATE MIDICATED ON THE APPROVAL BLOCK.

SUMMIT.

National LOMR Manager FEMA Map Coordination Contractor 3601 Eisenhower Avenue Suite 600 Alexandria, Virginia 22304

Re: CLOMR for the Northeast C-1 Detention Basin in the City of Henderson, Nevada

Dear LOMR Manager:

G. C. Wallace, Inc. (GCW) has been contracted by the City of Henderson, Nevada, to complete a Conditional Letter of Map Revision (CLOMR) for the Northeast C-1 Detention Basin (henceforth referred to as the NE C-1 Detention Basin) located within Henderson, Nevada. The purpose of this CLOMR is to lay the groundwork for a Letter of Map Revision (LOMR) in order to clarify and/or correct the existing Community Panel to reflect the proposed conditions within the watershed.

The project site is located in portions of Sections 10, 14, and 15; Township 22 South; Range 63 East. A vicinity map and location map showing the exact location of the project are included as Figure 1 and Figure 2.

#### **FEMA FLOODPLAIN STATUS**

Figure 3 shows the project site in relation to designated Federal Emergency Management Agency (FEMA) flood zones. According to Flood Insurance Rate Map (FIRM) Panel 32003C 2620 E, dated September 27, 2002, a portion of the project site lies within a FEMA-designated Special Flood Hazard Area (SFHA) Zone A, while the remaining area of the project site lies within FEMA-designated Zone X. The proposed NE C-1 Detention Basin is not located in a FEMA-designated Special Flood Hazard Area. However, a portion of the proposed collection channel system is located within a FEMA-designated Special Flood Hazard Area.

The following information supporting this request for a CLOMR is enclosed. This request is based on the proposed improvements consisting of the installation of a collection channel, a detention basin, and outfall storm drain facilities:

- A check in the amount of \$4,400.00, payable to the National Flood Insurance Program, has been included with this submittal for review and processing fees.
- Payment Information Form (81-107).
- FEMA MT-2 Forms: 1, 2, and 3.
- Figure 1 Vicinity Map.
- Figure 2 Location Map.
- Figure 3 Effective FIRM.
- Figure 4 Proposed FIRM Revisions.

- Figure 5 Annotated FIRM.
- Figure 6 Modified Clark County Regional Flood Control District (CCRFCD) Master Plan Update (MPU) Figure F-22.
- Figure 7 Ultimate Conditions Drainage Map.
- Exhibit A Upper Berm Approximate Methods Analysis.

#### PROPOSED IMPROVEMENTS

The proposed improvements consist of an upper berm, a concrete-lined collection channel, the NE C-1 Detention Basin, and a storm drain outfall facility to convey flows to the existing C-1 Channel downstream.

Through visual inspection of digital topography and aerial photographs, the current FEMA SFHA Zone A within the River Mountains may not represent existing hydraulic conditions. The FEMA wash within the River Mountains splits off to the north and east at the proposed upper berm location. The upper berm is designed to prevent this flow split and direct 1527 cfs from Basin C1-65 north to the main confluence with the collection channel. The proposed berm is an 11-foot high embankment, with 4:1 sideslopes lined with roller compacted concrete on the upstream face, a 16-foot wide maintenance road at the top, and 10:1 earthern side slopes on the downstream face. Normal depth approximate methods calculations show the maximum depth of flow against the berm embankment is 1.3 feet, thus over 9 feet of freeboard is provided.

The proposed collection channel that connects to the existing soil cement levee just south of Burkholder Boulevard is a concrete-lined, 12-foot wide trapezoidal channel, with 3:1 sideslopes on either side. The lower portion of the channel is a 20-foot wide by 8-foot high rectangular concrete channel. The collection channel collects flows from Basins C1-55, C1-65, and C1-66 as well as the outflow from the existing East C-1 Detention Basin and conveys flows to the proposed NE C-1 Detention Basin. At two points along the length of the channel, washes exit the River Mountains foothills in concentrated points. Lateral structures have been designed to allow these flows to enter the channel without spilling over the top of the channel. The lateral structures include sediment/debris collection areas to remove larger sediment before the flow is conveyed into the collection channel.

The NE C-1 Detention Basin is designed to hold a volume of 353 Acre-feet, which includes an additional 10 percent volume to account for sedimentation, and is capable of containing the 100-year runoff. The NE C-1 Detention Basin is drained through a 72-inch storm drain at the northwest corner of the basin. The detention basin outfall, which consists of varying size storm drain, will convey flows westerly along Havre Avenue to the existing C-1 Channel at Pueblo Avenue.

#### HYDROLOGIC MODELING

Figure 7 presents the Drainage Map for the upper berm, NE C-1 Detention Basin, collection channel, outfall, and the existing Drake Channel. Hydrologic analyses for the upper berm, NE C-1 Detention Basin, and collection channel are referenced from the *Pre-Design Report for the Northeast C-1 Detention Basin* (henceforth referred to as the NE C-1 report), dated April 14, 2005, by G. C. Wallace Companies (GCW). The subject study was reviewed and accepted by the City of Henderson and the Clark County Regional Flood Control District. NE C-1 Model C1SDN3B-alt3.DAT from the NE C-1 report defines 100-year storm flows for the upper berm and collection channel. HEC-1 Model C1SDN4B-alt3.DAT from the NE C-1 report defines 100-year storm flows for the NE C-1 Detention Basin.

504-424

#### HYDRAULIC MODELING

Exhibit A presents the upper berm approximate methods analysis for the existing wash east of the upper berm within the River Mountains. The proposed berm will be constructed to eliminate the existing flow split within the River Mountains and direct all flows north to the NE C-1 collection channel. Normal depth calculations have been performed to delineate a proposed SFHA Zone A in the existing wash north of the berm to the proposed collection channel. Since flows in the existing wash are supercritical, the proposed SFHA Zone A is set at critical depth. Note that Figure 6, Modified Clark County Regional Flood Control District (CCRFCD) Master Plan Update (MPU) Figure F-22, indicates the proposed revised Zone A boundary will lay outside of the CCRFCD Ultimate Development Boundary.

Hydraulic analyses for the NE C-1 Detention Basin collection channel are based on referenced improvement plans from the NE C-1 Report. The HEC-RAS model "mainchannel.prj" shows 100-year storm flows are contained within the collection channel.

Hydraulic analyses for the NE C-1 Detention Basin outfall are based on referenced improvement plans from the NE C-1 Detention Basin Outfall 90% Submittal. The WSPGW model "outflow.wsw" shows 100-year storm flows are contained within the outfall storm system.

HEC-RAS and normal depth calculations have been provided in the Appendix. The modeling and calculations are consistent with the Clark County Regional Flood Control District (CCRFCD) *Hydrologic Criteria and Drainage Design Manual* (HCDDM), updated August 1999.

#### **MAPPING**

The effective FIRM is shown on Figure 3. The proposed FIRM revisions are shown on Figure 4. The revisions to the effective FIRM take into account proposed improvements for the NE C-1 Detention Basin and NE C-1 Detention Basin Outfall. Improvement plans for the NE C-1 Detention Basin and NE C-1 Detention Basin Outfall are included in the Appendix. The annotated FIRM is shown on Figure 5. The proposed NE C-1 Detention Basin, collection channel, and outfall storm drain system will eliminate a portion of the SFHA Zone A west of the NE C-1 Detention Basin and collection channel. The existing Drake Channel remains in an SFHA Zone A. The SFHA Zone A outside the banks of the existing Drake Channel is removed since the source of the break out flows was cut off by the proposed collection channel for the NE C-1 Detention Basin. The proposed upstream berm will revise a portion of the SFHA Zone A within an unnamed wash east of the upstream berm. The NE C-1 outfall storm drain system becomes an SFHA Zone A and ties in to the existing C-1 Channel at Pueblo Avenue.

If you have any questions or need additional information, please contact us at (702) 804-2000.

Very truly yours,

G. C. WALLACE, INC.

Bill Hunter, PE Vice President

Flood Control Division

## **FEMA FORMS**

#### OVERVIEW & CONCURRENCE FORM

O.M.B No. 3067-0148 Expires September 30, 2005

#### PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 hour per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, SW, Washington DC 20472, Paperwork Reduction Project (3067-0148). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. Please do not send your completed survey to the above address.

#### A. REQUESTED RESPONSE FROM FEMA

This request is for a (d	check one):					
⊠ CLOMR	CLOMR: A letter from FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision, or proposed hydrology changes (See 44 CFR Ch. 1, Parts 60, 65 & 72).					
☐ LOMR:	LOMR: A letter from FEMA officially revising the current NFIP map to show the changes to floodplains, regulatory floodway or flood elevations. (See Parts 60 & 65 of the NFIP Regulations.)

3.	Pre-Submittal Review of Hydraulic Models			
	FEMA has developed two review programs, CHECK-2 and CHECK-RAS, to aid in the review of HEC-2 and HEC-RAS hydraulic models, respectively. These review programs verify that the hydraulic estimates and assumptions in the model data are in accordance with NFIP requirements, and that the data are comparable with the assumptions and limitations of HEC-2/HEC-RAS. CHECK-2 and CHECK-RAS identify areas of potential error or concern. These tools do not replace engineering judgment. CHECK-2 and CHECK-RAS can be downloaded from http://www.fema.gov/plan/prevent/fhm/frm_soft.shtm. We recommend that you review your HEC-2 and HEC-RAS models with CHECK-2 and CHECK-RAS. If you disagree with a message, please attach an explanation of why the message is not valid in this case. Review of your submittal and resolution of valid modeling discrepancies will result in reduced review time.			
	HEC-2/HEC-RAS models reviewed with CHECK-2/CHECK-RAS? ☐ Yes ☒ No			
4.	Models Submitted			
	Duplicate Effective Model* Corrected Effective Model* Existing or Pre-Project Conditions Model Revised or Post-Project Conditions Model Other - (attach description)  Natural File Name: Floodway File Name:			
*Not required for revisions to approximate 1%-annual-chance floodplains (Zone A) – for details, refer to the corresponding section of the instructions.				
Th htt	e document "Numerical Models Accepted by FEMA for NFIP Usage" lists the models accepted by FEMA. This document can be found at: p://www.fema.gov/plan/prevent/fhm/en_modl.shtm.			

#### C. MAPPING REQUIREMENTS

A certified topographic map must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions), location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach a copy of the effective FIRM and/or FBFM, annotated to show the boundaries of the revised 1%- and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%- and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area of revision.

#### D. COMMON REGULATORY REQUIREMENTS

_		
1.	For CLOMR requests, do Base Flood Elevations (BFEs) increase?	☐ Yes ⊠ No
	For CLOMR requests, if either of the following is true, please submit evidence of compliance with Section 65.12 of  The proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot.  The proposed project encroaches upon a SFHA with BFEs established and would result in increases above 1	-
2.	Does the request involve the placement or proposed placement of fill?	☐ Yes ⊠ No
	If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from floodplain set forth at 44 CFR 60.3(a)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for	oding in accordance with the
3.	For LOMR requests, is the regulatory floodway being revised?	☐ Yes ⊠ No
	If Yes, attach evidence of regulatory floodway revision notification. As per Paragraph 65.7(b)(1) of the NFIP Regulator requests involving revisions to the regulatory floodway. (Not required for revisions to approximate 1%-annual-ct Zone A designation] unless a regulatory floodway is being added. Elements and examples of regulatory floodway is found in the MT-2 Form 2 Instructions.)	nance floodplains (studied
4.	For LOMR requests, does this request require property owner notification and acceptance of BFE increases?	☐ Yes ⊠ No
	If Yes, please attach proof of property owner notification and acceptance (if available). Elements of and examples can be found in the MT-2 Form 2 Instructions.	of property owner notification

#### RIVERINE STRUCTURES FORM

O.M.B. No. 3067-0148 Expires September 30, 2005

#### PAPERWORK REDUCTION ACT

Public reporting burden for this form is estimated to average 7 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, SW, Washington DC 20472, Paperwork Reduction Project (3067-0148). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. Please do not send your completed survey to the above address.

Flooding Source: Unnamed Wash East of C-1 Channel

**B. CHANNELIZATION** 

Floo	Flooding Source: Unnamed Wash				
Nan	Name of Structure: Collection Channel				
1.	Accessory Structures				
	The channelization includes (check one):				
	□ Levees [Attach Section E (Levee/Floodwall)]       □ Drop structures         □ Superelevated sections       □ Transitions in cross sectional geometry         □ Drop structures       □ Drop structures         □ Transitions in cross sectional geometry       □ Energy dissipator				
2.	Drawing Checklist				
	Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.				
3.	Hydraulic Considerations				
	The channel was designed to carry 2378 (cfs) and/or the 100-year flood.				
	The design elevation in the channel is based on (check one):				
	☐ Subcritical flow ☐ Critical flow ☐ Supercritical flow ☐ Energy grade line				
	If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.				
	☐ Inlet to channel ☐ Outlet of channel ☐ At Drop Structures ☐ At Transitions ☑ Other locations (specify): Inlet to Detention Basin - controlled by stilling basin				
4.	Sediment Transport Considerations				
	Was sediment transport considered?   Yes   No If Yes, then fill out Section F (Sediment Transport).  If No, then attach your explanation for why sediment transport was not considered.				
	C. BRIDGE/CULVERT				
Floo	ding Source:				
	ne of Structure:				
1.	This revision reflects (check one):				
	<ul> <li>New bridge/culvert not modeled in the FIS</li> <li>Modified bridge/culvert previously modeled in the FIS</li> <li>New analysis of bridge/culvert previously modeled in the FIS</li> </ul>				
2.	Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8): If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.				
3.	Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):				
	□ Dimensions (height, width, span, radius, length)       □ Erosion Protection         □ Shape (culverts only)       □ Low Chord Elevations – Upstream and Downstream         □ Material       □ Top of Road Elevations – Upstream and Downstream         □ Beveling or Rounding       □ Structure Invert Elevations – Upstream and Downstream         □ Wing Wall Angle       □ Stream Invert Elevations – Upstream and Downstream         □ Skew Angle       □ Cross-Section Locations         □ Distances Between Cross Sections				
4.	Sediment Transport Considerations				
	Was sediment transport considered? Yes No If yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why sediment transport was not considered.				

**B. CHANNELIZATION** 

Floo	Flooding Source: Unnamed Wash					
Nan	ne of Structure: Outfall storm drain					
1.	Accessory Structures					
	The channelization includes (check one):  Levees [Attach Section E (Levee/Floodwall)]  Superelevated sections  Debris basin/detention basin  Other (Describe): storm drain					
2.	Drawing Checklist					
	Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.					
3.	Hydraulic Considerations					
	The channel was designed to carry 540 (cfs) and/or the 100-year flood.					
	The design elevation in the channel is based on (check one):					
	☐ Subcritical flow ☐ Critical flow ☐ Supercritical flow ☐ Energy grade line					
	If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.					
	☐ Inlet to channel ☐ Outlet of channel ☐ At Drop Structures ☐ At Transitions ☐ Other locations (specify): within storm drain as necessitated by geometry					
4.	Sediment Transport Considerations					
	Was sediment transport considered?

3.	☐ Modified bridge/culvert previously modeled in the FIS         ☐ New analysis of bridge/culvert previously modeled in the FIS         Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8):         If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.         Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):         ☐ Dimensions (height, width, span, radius, length)       ☐ Erosion Protection         ☐ Shape (culverts only)       ☐ Low Chord Elevations – Upstream and Downstream         ☐ Material       ☐ Top of Road Elevations – Upstream and Downstream         ☐ Beveling or Rounding       ☐ Structure Invert Elevations – Upstream and Downstream         ☐ Wing Wall Angle       ☐ Stream Invert Elevations – Upstream and Downstream         ☐ Skew Angle       ☐ Cross-Section Locations					

D. DAM

Flo	Flooding Source: Unnamed Wash						
Nai	Name of Structure: Northeast C1 Detention Basin						
1.	This request is for (check one):   Existing dam   New dam   Modification of existing dam						
2.	The dam was designed by (check one):						
	☑ Private organization Name of the agency or organization: G.C. Wallace Companies						
3.	Does the project involve revised hydrology?   Yes  No						
	If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2).						
4.	Does the submittal include debris/sediment yield analysis?   Yes  No						
	If yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why debris/sediment analysis was not considered.						
5.	Does the Base Flood Elevation behind the dam or downstream of the dam change?						
	☐ Yes ☐ No If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2) and complete the table below.						
	Stillwater Elevation Behind the Dam						
	FREQUENCY (% annual chance) FIS REVISED						
	10-year (10%) 50-year (2%) 100-year (1%) 500-year (0.2%) Normal Pool Elevation						
6.	Please attach a copy of the formal Operation and Maintenance Plan						

#### E. LEVEE/FLOODWALL

1.	<u>Sy</u>	stem Elements			
	a.	This Levee/Floodwall analysis is based on (check one):			
		<ul> <li>□ upgrading of an existing levee/floodwall system</li> <li>□ a newly constructed levee/floodwall system</li> <li>□ reanalysis of an existing levee/floodwall system</li> </ul>			
	b.	Levee elements and locations are (check one):			
		structural floodwall	Station to Station to Station NA to NA		
	c.	Structural Type (check one):			
		<ul> <li>☐ monolithic cast-in place reinforced concrete</li> <li>☐ reinforced concrete masonry block</li> <li>☐ sheet piling</li> <li>☒ Other (describe): Roller Compacted Concrete</li> </ul>			
	d.	Has this levee/floodwall system been certified by a Federal agen	cy to provide protection from the base floc	od?	
		☐ Yes   ☑ No			
		If Yes, by which agency?			
	e.	Attach certified drawings containing the following information (indi	cate drawing sheet numbers):		
		1. Plan of the levee embankment and floodwall structures.	Sheet Numbers: C-3		
		<ol><li>A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system.</li></ol>	Sheet Numbers: C-21		
		<ol><li>A profile of the BFE, closure opening outlet and inlet invert elevations, type and size of opening, and kind of closure.</li></ol>	Sheet Numbers: NA		
		4. A layout detail for the embankment protection measures.	Sheet Numbers: C-21		
		<ol> <li>Location, layout, and size and shape of the levee embankment features, foundation treatment, floodwall structure, closure structures, and pump stations.</li> </ol>	Sheet Numbers: C-3		
2.	Fre	eeboard			
	a.	The minimum freeboard provided above the BFE is:			
		Riverine			
		3.0 feet or more at the downstream end and throughout 3.5 feet or more at the upstream end 4.0 feet within 100 feet upstream of all structures and/or constric	tions	⊠ Yes ⊠ Yes ⊠ Yes	□ No □ No □ No
		Coastal			
		1.0 foot above the height of the one percent wave associated wit stillwater surge elevation or maximum wave runup (whichever is		□vaa	Пи
		2.0 feet above the 1% appual chance stillwater curre sleveties		☐ Yes	□ No
		2.0 feet above the 1%-annual-chance stillwater surge elevation		☐ Yes	□ No

2.	2. Freeboard (continued)								
	Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Paragraph 65.10(b)(1)(ii) of the NFIP Regulations.								
	If No is answered to any of the above, please attach an explanation.								
	b. Is there an indication from historical records that ice-jamming can affect the BFE? ☐ Yes ☒ No								
	If Yes, provide ice-jam analysis profile and evidence that the minimum freeboard discussed above still exists.								
3.									
	a. Openings through the levee system (check one): ☐ exists ☐ does not exist								
	If opening exists, list all closures:								
Cha	Channel Station Left or Right Bank Opening Type Highest Elevation for Opening Invert Type of Closure Device								
(Ext	end table on an adde	d sheet as neede	ed and refere	ence)

7.	<u>S</u> e	ettlement
	a.	Has anticipated potential settlement been determined and incorporated into the specified construction elevations to maintain the established freeboard margin?
	b.	The computed range of settlement is ft. to ft.
	C.	Settlement of the levee crest is determined to be primarily from :
		Foundation consolidation Embankment compression Other (Describe):
	d.	Differential settlement of floodwalls 🔲 has 🛛 has not been accommodated in the structural design and construction.
		Attach engineering analysis to support construction plans.
8.	Int	erior Drainage
	a.	Specify size of each interior watershed:
		Draining to pressure conduit: NA acres Draining to ponding area: NA acres
	b.	Relationships Established
		Ponding elevation vs. storage
	c.	The river flow duration curve is enclosed:
	d.	Specify the discharge capacity of the head pressure conduit: cfs
	e.	Which flooding conditions were analyzed?
		<ul> <li>Gravity flow (Interior Watershed)</li> <li>Common storm (River Watershed)</li> <li>Historical ponding probability</li> <li>Coastal wave overtopping</li> <li>Yes</li> <li>No</li> <li>No</li> <li>No</li> </ul>
		If No for any of the above, attach explanation.
	f.	Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection. $\square$ Yes $\square$ No
		If No, attach explanation.
	g.	The rate of seepage through the levee system for the base flood is cfs
	h.	The length of levee system used to drive this seepage rate in item g: ft.

8. Interior Drainage (continued)						
	i. Will pumping plants be used for interior drainage?		or drainage?	☐ Yes	□No	
		If Yes, include the number of pumping For each pumping plant, list:	plants:			
			Plant #1		Plant #2	
The	num	ber of pumps				
The	pond	ding storage capacity				
The	max	imum pumping rate				
The	max	imum pumping head				
The	pum	ping starting elevation				
The	pum	ping stopping elevation				
Is th	e dis	charge facility protected?				
		a flood warning plan?				
How and	muc flood	ch time is available between warning ling?				
Will	the c	pperation be automatic?		☐ Yes	□No	
If the	e pun	nps are electric, are there backup power	r sources?	☐ Yes	□No	
(Ref	eren	ce: USACE EM-1110-2-3101, 3102, 31	03, 3104, and 3105)			
Inclu inter	ide a ior w	copy of supporting documentation of datasets. cape that result in flooding.	ata and analysis. Provide a map showing	the flood	ed area and maximum ponding elevations for all	
9.	<u>Oth</u>	ner Design Criteria				
	a.	The following items have been address	sed as stated:			
		Liquefaction ☐ is ☒ is not a probler Hydrocompaction ☐ is ☒ is not a problem Heave differential movement due to so	n roblem oils of high shrink/swell  ☐ is  ⊠ is not a	problem		
	b.	For each of these problems, state the b	pasic facts and corrective action taken:			
		Attach supporting documentation				
	C.	If the levee/floodwall is new or enlarged ☐ Yes ☑ No	d, will the structure adversely impact flood	d levels ar	nd/or flow velocities floodside of the structure?	
	Attach supporting documentation					
	d.	Sediment Transport Considerations:				
		Was sediment transport considered? If No, then attach your explanation for	☐ Yes ☒ No If Yes, then fill out why sediment transport was not consider	Section F red.	(Sediment Transport).	

E. LEVEE/FLOODWALL (CONTINUED) 10 Operational Plan And Criteria Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? Yes □ No Does the operation plan incorporate all the provisions for closure devices as required in Paragraph 65.10(c)(1) of the NFIP regulations? ☐ Yes Does the operation plan incorporate all the provisions for interior drainage as required in Paragraph 65.10(c)(2) of the NFIP regulations? ☐ Yes If the answer is No to any of the above, please attach supporting documentation. 11. Maintenance Plan Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? Yes □ No If No, please attach supporting documentation. 12. Operations and Maintenance Plan Please attach a copy of the formal Operations and Maintenance Plan for the levee/floodwall. F. SEDIMENT TRANSPORT Flooding Source: Unnamed Wash Name of Structure: Northeast C-1 Detention Basin If there is any indication from historical records that sediment transport (including scour and deposition) can affect the Base Flood Elevation (BFE); and/or based on the stream morphology, vegetative cover, development of the watershed and bank conditions, there is a potential for debris and sediment transport (including scour and deposition) to affect the BFEs, then provide the following information along with the supporting documentation: Sediment load associated with the base flood discharge: Volume 14.2 acre-feet Debris load associated with the base flood discharge: Volume N/A acre-feet Sediment transport rate N/A (percent concentration by volume) Method used to estimate sediment transport: Universal Soil Loss Equation, Meyer-Peter Equation Most sediment transport formulas are intended for a range of hydraulic conditions and sediment sizes; attach a detailed explanation for using the selected method. Method used to estimate scour and/or deposition: Universal Soil Loss Equation, Meyer-Pater Equation

If a sediment analysis has not been performed, an explanation as to why sediment transport (including scour and deposition) will not affect the BFEs or structures must be provided.

N/A

on bulked flows.

Please note that bulked flows are used to evaluate the performance of a structure during the base flood; however, FEMA does not map BFEs based

Method used to revise hydraulic or hydrologic analysis (model) to account for sediment transport:

## **ADDITIONAL INFORMATION**

## FORM 2 MT\_2 RIVERINE HYDROLOGY HYDRAULICS FORM A.HYDROLOGY

### 5. Impacts of Sediment Transport on Hydrology

Two lateral structures along the length of the NEC-1 Detention Basin collection channel are designed to remove larger sediment before runoff is conveyed into the collection channel. Therefore the impacts of sediment transport on hydrology were not considered.

## FORM 3 MT\_2 RIVERINE STRUCTURES FORM B. CHANNELIZATION

#### 4. Sediment Transport Considerations

Two lateral structures along the length of the NEC-1 Detention Basin collection channel are designed to remove larger sediment before runoff is conveyed into the collection channel. Therefore the impacts of sediment transport on the collection channel were not considered.

#### E. LEVEE/FLOODWALL

#### 1. System Elements

The upper berm is an 11-foot high Roller Compacted Concrete (RCC) lined structure with 4:1 side slopes on the floodside and 10:1 side slopes on the landslide.

#### 2. Freeboard

A normal depth analysis was performed for the unnamed wash adjacent to the upper berm. The depth of flow in the wash was set at critical depth, since 100-year storm flow in the wash is supercritical. The maximum depth of flow in the wash adjacent to the berm is 1.3 feet at cross section 12.1 on Exhibit A, Upper Berm Normal Depth Cross Sections. The corresponding berm height at section 12.1 is approximately 11 feet, thus 9.7 feet of freeboard is provided.

## 3. Closures

The upper berm does not include any closures.

#### 4. Embankment Protection

Embankment protection calculations were not performed since the berm is lined with RCC.

## 5. Embankment and Foundation Stability

The upper berm is designed to prevent a flow split within the River Mountains and will be affected by storm runoff only. The duration of the base hydrograph against the embankment is 3.5 hours. Runoff does not pond up against the embankment. Since the berm is designed to direct storm flows for a limited duration, and the depth of flow against the embankment is only 1.3 feet and the berm design provides 9.7 feet of freeboard, embankment and foundation stability analyses were not performed for the upper berm.

#### 6. Floodwall and Foundation Stability

The upper berm does not include a floodwall.

#### 7. Settlement

A settlement analysis was not performed for the upper berm, since the berm provides adequate freeboard to protect against settlement impacts.

#### 8. Interior Drainage

No interior drainage affects the upper berm.

#### 9. Other Design Criteria

d. A sediment analysis was not provided for the upper berm since the berm is lined with Roller Compacted Concrete and is designed with 9.7 feet of freeboard.

### F. SEDIMENT TRANSPORT

Hydrologic and hydraulic models related to the NEC-1 Detention Basin, collection channel, outfall, and upstream berm are not revised to account for debris load and sediment transport. Sediment removal structures are to be constructed along the collection channel. The NEC-1 Detention Basin was designed with extra volume to accommodate sediment load and with trash racks to control clogging from debris. The Universal Soil Loss Equation and Meyer-Peter Equation were used to estimate sediment transport for the NEC-1 Detention Basin. The Detention Basin Sedimentation Analysis has been included with this CLOMR.

type, and the results will be only as good as the assumptions.

## Source Deposition

Another method of determining the sediment delivery ratio is to make a field study of a water-shed and estimate the amount of deposition that can be traced to any one source. The difference in the volume of such deposition and the volume of sediment produced by the source gives an estimate of the delivery ratio from that source.

Table 6-2.—Sediment source and the delivery ratio

Sediment	Eros	sion¹	Sedim	Deli-	
source	Sand	Fines	Sand	Fines	very ratio
	tons/yr	tons/yr	tons/yr	tons/yr	Pct.

<sup>1</sup>Determine by standard SCS procedures.

Assume that all fines are from sheet erosion and streambanks and all sand is from gullies and roadbanks.

<sup>a</sup>Difference between total yield of fines and yield of fines from streambanks.

Compute as ratio of total sand yield to total sand available; assume equal delivery ratio for gullies and roadbanks.

\*Estimate bedload as a percentage of the suspended load.

Determine from suspended-load measurements.

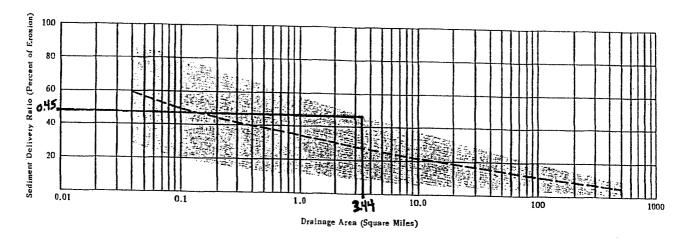

Figure 6-2.—Relationship between drainage area and sediment delivery ratio.

## **Sediment Deposition**

The amount of sediment accumulation in a reservoir depends on the sediment yield to the reservoir and the trap efficiency. How the accumulated sediment is distributed within the reservoir depends on the character of the inflowing sediment, the operation of the reservoir, and other factors.

## Trap Efficiency

Trap efficiency is the amount (percentage) of the sediment delivered to a reservoir that remains in it. It is a function of detention storage time, character of the sediment, nature of the inflow, and other factors. Trap efficiency can be readily estimated on the basis of the ratio of the capacity of the reservoir to the average annual inflow (Brune 1953, Gottschalk 1965) by using the following procedure:

- 1. Estimate the total capacity required of the reservoir in watershed inches (see page 8-13), including the total capacity allocated to floodwater detention, sediment storage, and other uses. Since an actual value cannot be obtained until final design is completed, estimate the total capacity as follows:
- a. Assume, for the particular physiographic area, a reasonable sediment-storage volume that might be required for the design life of the structure; e.g., 1.5 in.
- b. Obtain from the hydrologist an estimate of the required floodwater-detention storage; e.g., 4.5
- c. Add the values for 1a and 1b to get an estimate of the total capacity of the reservoir; i.e., 1.5 + 4.5 = 6.0 in. Include any additional storage for water supply, recreation, and other uses in the total. If an estimate of the total required storage in acre-feet is available, convert this value to watershed inches to simplify the calculation.
- 2. Determine the average annual runoff in inches. This value can be determined from the hydrologic analysis of the watershed, from Hydrologic Investigation Atlas HA-212 (Busby 1966) or from other available information. In this example, the average annual runoff is 17.5 in.
- 3. Divide the approximate total capacity in inches (item 1c) by the average annual runoff in inches (item 2) to obtain the capacity-inflow ratio (C/I); i.e.,  $C/I = 6.0 \div 17.5 = 0.343$ .

4. Obtain the trap efficiency for a given C/I fro the vertical scale of figure 8-2. To do so, estimate the texture of the incoming sediment on the basis of the character of watershed soils and the principal sediment sources. If the incoming sediment is predominantly bedload or coarse material or is highly flocculated, use the upper curve of figure 8-2 to determine trap efficiency. If the incoming sediment is primarily colloids, dispersed clays, and fine silts, use the lower curve. If the incoming sediment consists of various grain sizes widely distributed, use the median curve. The texure also affects the distribution and allocation of the sediment in various pools.

The curves in figure 8-2 cannot be applied directly to dry reservoirs! If water flows through ungated outlets below the crest of the principal spillway, trap efficiency is likely to be lowered. If the inflowing sediment is predominantly sand, reduce the trap efficiency by about 5 percent; in the scincy is chiefly fine textured, reduce the trap efficiency trap efficiency by about 5 percent; if the sediment

If the incoming sediment is composed essentially of equal parts of clay, silt, and fine sand and the proposed structure is to have a submerged sediment pool, use the median curve of figure 8-2 without adjustment. In the example (C/I = 0.343) trap efficiency would be 95 percent. In a situation similar except that the structure is designed as a dry reservoir, trap efficiency would be 85 percent.

## Design Life

The design life of a reservoir is the period required for the reservoir to fulfill its intended purpose. Structures designed by SCS in the watershed protection and flood prevention programs usually are designed for a life of 50 or 100 years. Provision must be made to ensure the full design storage capacity for the planned design life. This may mean cleaning out deposited sediment at predetermined intervals during the design life or, as is generally the situation, providing enough capacity to store all the accumulated sediment for the reservoir's design life without dimininshing the design water storage.

Land treatment (conservation) measures seldom are fully effective in reducing erosion and sediment yield in less than 5 years. Often a longer time is required. This delay in effectiveness during the

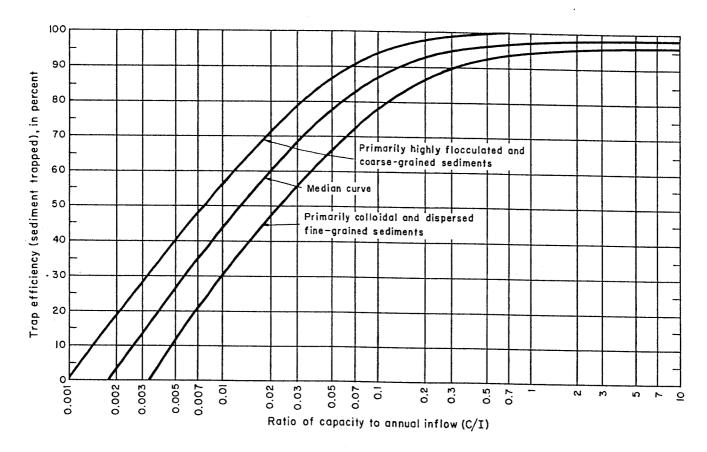

Figure 8-2.—Trap efficiency of reservoirs.

early part of a reservoir's life (Present Conditions on SCS-ENG-309) must be recognized in design. Determine, in consultation with the state program staff and the area and district conservationists, how many years will be required for the proposed land-treatment measures to be installed and become effective.

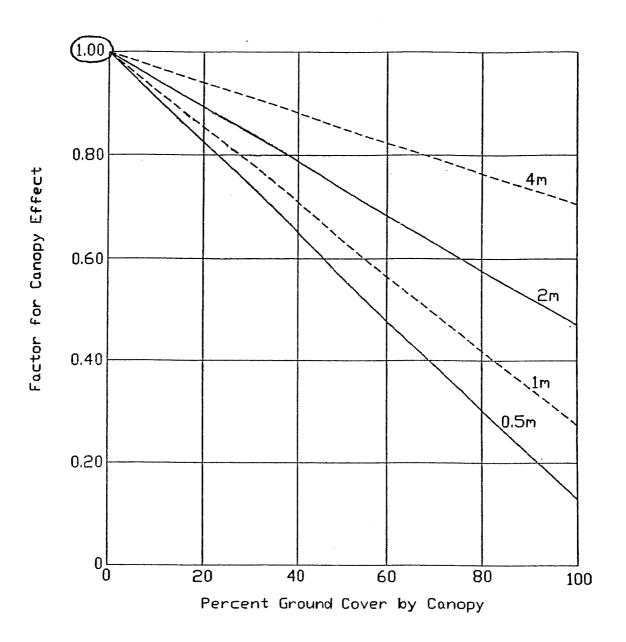

### Distribution of Sediment

The total storage capacity of a reservoir must include capacity for all water storage plus capacity for the sediment expected to accumulate during the reservoir's design life. Consequently, the amount of sediment that will be deposited above the elevation designated for the sediment pool must be estimated. Such deposits may materially affect the proper functioning of the structure.

The amount of sediment that will be deposited above the principal spillway varies with the nature of the sediment, shape of the reservoir, topography of the reservoir floor, nature of the approach channel, detention time, and purpose of the reservir. The coarse sediment settles quickly as the velocity of the water decreases. Generally, sediment inflow is greatest when detention capacity is being used and some sediment is deposited at elevations above the principal spillway. Usually, more coarse material than fine material is deposited above this elevation. The texture of the incoming sediment is the basis for estimating the percentage of incoming sediment that will be deposited above the elevation of the principal spillway. Use the following guidelines for estimating this percentage.

- 1. For watersheds of low to moderate relief in which the predominant sources of sediment are silty and clayey soils, sheet flow is the principal eroding agent, and the sediment is transported primarily in suspension: 10 percent.
- 2. For watersheds of low to moderate relief in which the incoming sediment consists of nearly equal amounts of medium to fine sands, silts, and clays; sheet flow and channel erosion are the principal agents; and the coarser material is

## CHAPTER 1 EXECUTIVE SUMMARY

#### 1.10 EXECUTIVE SUMMARY

The Clark County Regional Flood Control District (District) was created under NRS 543 with responsibility to plan, construct and maintain drainage and flood control facilities throughout Clark County. In order to comply with NRS 543.340(4), this **Operations and Maintenance Manual** has been prepared through the cooperation and support of all of the affected member entities, which include Clark County and the incorporated cities within Clark County. The document sets forth both policies and procedures by which the maintenance of the drainage and flood control facilities will be achieved to assure their proper working order at the time of need. The overall goal of the maintenance program as adopted by the District Board is as follows:

COMPLY WITH THE PROVISIONS OF NRS 543.340(4) AND ASSURE THAT FACILITIES IN THE MASTER PLAN ARE MAINTAINED IN A MANNER THAT MAXIMIZES THEIR USEFUL LIFE AND ENSURES THEIR OPERATION AT DESIGN CAPACITY DURING A STORM EVENT.

Nineteen policy statements have been adopted to support the above goal.

In order to achieve the goal, and to comply with the adopted policies, the following procedures have been developed in an open and very participatory manner.

**Funding Procedure** – Provides for a means by which the member entities can be paid for activities associated with maintenance of drainage and flood control facilities on the Master Plan provided they meet criteria as set forth in the manual.

Administrative Procedure – Provides for establishing standards and levels of service by which maintenance will be achieved. This procedure includes the steps and schedule by which an annual work plan is established and adopted by the District Board. It also provides for the certification of performance by each member entity in accordance with the annual interlocal contract. The ability for the member entity to contract maintenance activities to private contractors is also authorized under this procedure.

Maintenance Procedures – This procedure provides the specific activities under which the maintenance program is to be carried out as listed below:

ACTIVITY NUMBER	ACTIVITY NAME	WORK MEASURE UNIT
05	Inspect Channels	Miles
10	Clean and Reshape Channels	Cubic Yards
15	Repair Lined Channel	Each
20	Provide/Maintain Erosion Control	Square Feet
21	Provide/Maintain Dust Control	Acres
25	Clean and Inspect Detention/Debris Basins	Cubic Yards
30	Erosion Repair	Cubic Yards
35	Fence Repair	Linear Feet
40	Vegetation Control - Chemical	Acres
45	Vegetation Control - Mechanical	Acres
50	Maintain Access Road	Miles
55	Clean and Inspect Inlet/Outlet Structures	Each
60	Repair Inlet/Outlet Structures	Each
65	Clean Storm Sewer Lines	Linear Feet
70	Storm Sewer Repair	Repairs
75	Clean/Flush Culverts & Bridges	Each
80	Miscellaneous Work Activities	Labor Hours
85	Engineering	Labor Hours

A specific performance standard has been developed for each activity setting forth the following elements:

- The most effective crew size.
- The kinds and number of equipment required.
- The major types of material that should be used.
- Recommended procedures for performing the work.
- An estimate of expected average daily accomplishment with standard crew size, equipment, and procedures.
- Authorization and scheduling criteria.

Inventory Procedures – A critical element of any maintenance program is the identification and condition of the overall drainage and flood control system. In the case of this program, the inventory also identifies those facilities that are "eligible" for payment of maintenance activities, provided the work is a part of the annual plan. Facilities eligible are those identified in the Regional Flood Control District's Master Plan and any revisions, amendments, and/or changes subsequently approved. Only those facilities that exist as Master Plan facilities, or exist in the same alignment as a proposed Master Plan facility and appurtenant facilities are eligible.

Maintenance is an ongoing and very dynamic function of a successful drainage and flood control program. This <u>Operations and Maintenance Manual</u> sets forth an initial set of policies and procedures, including the various actions required to achieve the maintenance goal. The manual will need to be updated on a regular basis to reflect fiscal implications and the experience gained as the District continues to grow and to serve the citizens and taxpayers of Clark County.

## CHAPTER 2 INTRODUCTION

#### 2.10 BACKGROUND

The Clark County Regional Flood Control District (District) was established in 1986 to plan, construct, and maintain drainage and flood control facilities throughout Clark County. These responsibilities focus on alleviating the potential for flooding and protecting the lives and property of existing residents, future residents and visitors within the District's Service Area. The initial phases of the District's program succeeded in preparing a Master Plan, uniform design criteria, regulatory standards, and constructing facilities. As these areas have progressed, the District, along with other agencies and member entities in the County, has oriented its efforts towards assuring adequate maintenance of flood control facilities and conveyance systems. This orientation is consistent with the vital role maintenance plays in all comprehensive flood control programs. This **Operations and Maintenance Manual** has been prepared through the District with the support and cooperation of each affected member entity. It represents a commitment to uniform flood control system standards and establishes a blueprint for a cost effective and consistent maintenance program throughout the District's service area.

#### 2.20 AUTHORITY

Nevada Revised Statute (NRS) 543 mandates that the District shall undertake programs for both construction and maintenance of flood control facilities. A commitment to building and maintaining flood control facilities within Clark County is reiterated in the District's <u>Uniform Regulations for the Control of Drainage</u> (Uniform Regulations) which states that capital improvements, operation, and maintenance are all interrelated parts of the District's overall flood control program. In accordance with NRS 543.340(4) and the Uniform Regulations, the District prepared an <u>Operations and Maintenance Manual</u>, which was adopted by the District Board on November 8, 1990. To reflect fiscal implications and experience gained, the manual was updated in 1995, 1999, 2003, 2005, and 2007.

#### 2.30 RESPONSIBILITY

The District was formed, in part, to fund and coordinate the construction and maintenance of facilities to alleviate flooding and protect the life and property of citizens within the boundaries of the District. It is the responsibility of the District to prepare and update the Master Plan for the control of floods, and manage the Regional Fund for the Control of Floods in a manner consistent with NRS 543.

#### 2.40 APPROACH

The maintenance program must assure that the flood control projects funded by the District are maintained at a level which maximizes their useful life and assures that facilities operate to design capacity. As an interconnected network of conveyances and structures, failure of any flood control facility to operate properly may affect the performance of the overall system within a specific watershed.

Flood control facilities require regular maintenance if they are to be functional, visually attractive, and last through their design life. Accordingly, the development of a maintenance program is just as critical to the overall success of a comprehensive flood control effort as basin planning and regulation enforcement. As stormwater and flood control programs begin to address nonpoint pollution/water quality issues, the maintenance program will play an even greater role by enabling cost effective reductions in pollutant loadings to receiving waters. Finally, visibility of the program to the public, which a comprehensive maintenance program affords, is an important factor in demonstrating that flood control management is truly a full-time commitment and not simply a priority only after a storm event. The primary objectives of the District's maintenance program are:

- To develop a complete physical feature inventory for the system.
- To establish overall policies and levels of service.
- To develop operating procedures.

It is also critical that ongoing inspection and reporting procedures continue to assure all systems are ready when needed.

Due to the multiple jurisdictions involved with maintenance of the flood control system, a commitment to this program from all member entities within the service area of the Regional Flood Control District was essential. This commitment was made through the Maintenance Technical Committee during the development of the manual in 1990. It was also recognized that coordination of this maintenance program with state transportation programs was critical. The level and consistency of the long range commitment has a direct impact on how effective the resulting maintenance system becomes. This commitment begins with a credible **Operations** and Maintenance Manual.

An essential building block for a successful flood control maintenance program in Clark County is a complete physical feature inventory of the system. It is also important to note that no maintenance program is ever truly "complete". Rather, these programs are constantly evolving as inventories are defined and standards/costs are further refined. A similar evolution is anticipated for this program. The flexibility to adjust to this evolutionary process has been built into this manual.

#### 2.50 **DEFINITIONS**

In addition to the definitions of terms and phrases set forth in other District documents, the following apply to operation and maintenance:

Acceptance for Maintenance: "Acceptance for Maintenance" means that a project funded by the District, member entity, or other public/private funds is a part of the Master Plan and has been constructed in accordance with District standards and therefore eligible for maintenance funding by the District.

Annual Budget: "Annual Budget" means the anticipated costs associated with completion of each activity outlined within the annual work plan submitted by each of the member entities, and ultimately approved by the District Board of Directors prior to the start of each fiscal year.

Annual Work Plan: "Annual Work Plan" means a plan submitted by each of the member entities setting forth the type and quantity of maintenance to be performed during the ensuing budget year in a form prescribed by the District specifically requesting funds for budgeting purposes.

**Certification**: "Certification" means the documentation which evidences that required maintenance by a member entity has been completed in accordance with established standards.

Maintenance Program: The "Maintenance Program" has been established by the Board to provide funding of, and establish performance standards and guidelines for, the maintenance of flood control facilities located throughout Clark County and the incorporated areas. The Program provides funding to member entities to perform maintenance of eligible flood control facilities. Projects eligible for District maintenance funding are those identified in the Regional Flood Control District's Master Plan and any revisions, amendments, and/or changes subsequently approved. Only those facilities that exist as Master Plan Facilities or exist in the same alignment as a proposed Master Plan facility, and appurtenant facilities are eligible. Subsequently, the District works with the member entities annually to develop Maintenance Work Plans. The work plans undertaken through the Maintenance Program and budgets are funded through the annual interlocal contracts between each member entity and the District. No matching funds are required, except in those cases where an arrangement has been made to cooperatively fund a particular field activity. Work is performed using a combination of private contractors and member entity maintenance staff. The Maintenance Program contains three broad categories of work:

1. Routine and/or Preventive Maintenance: "Routine and/or Preventive Maintenance" means work on existing facilities to keep them in proper working condition, including but not limited to, debris/sedimentation removal, vegetative control, and reshaping.

- 2. Restoration: "Restoration" means the repair to existing facilities after a storm event including erosion repair, fence replacement, repairing/replacing trash racks, inlets, storm sewer systems, major debris removal, and similar "one time" work activities.
- 3. Rehabilitation: "Rehabilitation" means rebuilding a facility and/or conveyance system after it is destroyed by an event or it has been determined that it is not operating according to the intent of the design documents on file at the District causing a safety or maintenance problem or it has deteriorated to the extent that it must be replaced "in kind" including replacing or modifying drop structures, reshaping channels, bank protection restoration, inlets, etc. In general, the rehabilitative projects are designed by consultants and the construction contracts are awarded through a bid process.

Maintenance Program Exclusions: "Exclusions" typically include local drainageway maintenance such as curb and gutter work, inlet maintenance, and repairs to small piped storm sewer systems, unless otherwise constructed as part of a regional facility and landscaping, irrigation systems, trails, bike paths, and other recreational or multi-use features that do not have a direct flood control or drainage function. Maintenance work exclusions also include repair or replacement of existing flood control Master Plan facilities which undergo catastrophic damage of more than one-half (1/2) mile. These types of catastrophic damages will generally be classified as capital improvements, and requests for capital improvement funds must be reprogrammed as a capital improvement project in accordance with District Policies and Procedures.

## CHAPTER 3 POLICY STATEMENT

It is important that a maintenance policy statement be adopted which reflects the objectives of both the elected officials and the operations staff charged with its implementation. The initial policy document was prepared and reviewed by District staff and the Maintenance Committee. Following input from the group, it was reviewed by the respective Public Works Directors of all member entities and further revised to reflect their input. The document was then reviewed by the Technical Advisory Committee (TAC) and the Citizens Advisory Committee (CAC) before final adoption by the Board on November 8, 1990. To reflect fiscal implications and experience gained, the document is updated on a regular basis. The final adopted policy statement is as follows:

#### 3.10 **GOAL**

Comply with the provisions of NRS 543.340 (4) and assure that facilities in the Master Plan are maintained in a manner that maximizes their useful life and ensures their operation at design capacity during a storm event.

#### 3.20 POLICIES

- 1. Flood control facilities identified in the Master Plan are eligible for District maintenance funding.
- 2. Facilities funded through the District shall be inspected on an annual basis, as a minimum, to assure proper maintenance has been provided.
- 3. In cases where funded maintenance by the lead member entity is not performed to the standards specified, the District shall perform or cause to be performed the maintenance necessary to assure proper operations of the facility. Costs incurred by the District shall be deducted from the amount authorized in the maintenance agreement between the lead member entity and the District.
- 4. Flood control facilities improved or constructed after adoption of this policy, must be designed in accordance with District criteria and standards to be eligible for maintenance funding.

- 5. Access to the facility must be guaranteed to the lead member entity and the District in order to be eligible for maintenance funding.
- 6. Maintenance and repairs to flood control facilities will be performed in a manner that will minimize the degradation of water quality.
- 7. The maintenance requirements applied to these facilities shall be based on the standards contained in the District's **Operations and Maintenance Manual**.
- 8. The lead member entity must develop an annual work plan to be eligible for maintenance funds. Upon completion of the work, the member entity must certify that the work was completed in accordance with the standards contained in the District's **Operations and Maintenance Manual**.
- 9. Maintenance funding is available only for repair, restoration, rehabilitation, or maintenance of existing facilities and is not intended to supplement the District's capital improvement program. For example, if the intent of the field activity is to increase the designed capacity of a facility or conveyance, then that function is capital in nature.
- 10. Copies of plans and specifications must be furnished to the District for review and approval prior to finalizing design when maintenance projects are awarded through a bid process. This review will be for the purpose of ensuring compliance with the District's Master Plan and regional objectives and will be used to update the inventory of existing facilities. As-built plans or record drawings will be provided to the District upon project completion and prior to project closeout.
- 11. Expenditures for repair and replacement of existing flood control Master Plan facilities which undergo catastrophic damage of one-half (1/2) mile or less will be classified as maintenance. These expenditures will be made from funds budgeted in the Facilities Maintenance Fund.
- 12. Expenditures for repair and replacement of existing flood control Master Plan facilities which undergo catastrophic damage of more than one-half (1/2) mile will generally be classified as capital improvements. Requests for capital improvement funds must be programmed as a capital improvement project in accordance with District Policies and Procedures.
- 13. Expenditures for removal of debris and sediment captured or deposited in a debris basin, detention basin or a linear flood control facility will be classified as maintenance. Necessary repairs to a debris or detention basin will also be classified as maintenance. These expenditures will be made from funds budgeted in the Facilities Maintenance Fund.

- 14. Expenditures for repair and replacement of non-improved or "earth lined" flood control facilities and features will be classified as maintenance. These expenditures will be made from funds budgeted in the Facilities Maintenance Fund.
- 15. A member entity may consider another option in lieu of repairing or rehabilitating facilities that have not been improved to Master Plan design specifications. This option is to build/implement the long-term solution for the damaged facility. Expediting the implementation of the Master Plan may be a viable alternative that maximizes the use of available resources. This should be considered as an alternative if the long-term solution can be implemented in a timely manner. Requests for capital improvement funds to implement a Master Plan project must be programmed as a capital improvement project in accordance with District Policies and Procedures.
- 16. Funds may be provided by the District for maintenance of Master Plan facilities by outside contractors under conditions when the use of such an approach is deemed the most efficient and cost effective by the lead member entity.
- 17. If a member entity receives funds from other sources for maintenance and repair of drainage and flood control facilities paid for by the District, the funds will be paid to the District. Examples of other sources include, but are not limited to, Federal Emergency Management Agency (FEMA) funds for repairs resulting from a designated disaster, and funding from developers for maintenance and repair of District facilities.
- 18. The District will not be responsible for any fines and/or penalties caused by the actions or inactions of the member entity's employees, consultants, contractors, or agents.
- 19. Bridge structures, generally speaking, are not eligible for District funding unless it can be shown that the flood carrying aspects of the regional facility causes a safety or maintenance problem.

## CHAPTER 4 PROCEDURES

#### 4.10 FUNDING PROCEDURES

#### 4.11 Purpose

This element of the <u>Operations and Maintenance Manual</u> provides the member entities with procedures for the appropriation, expenditure and payment of funds to perform maintenance activities. A principle role of the District shall be to manage and disburse payments to the member entities for maintenance that is performed in compliance with the approved plans. (See Funding Flow Diagram.)

The District has authorized funding to assist the member entities with major drainageway maintenance in accordance with the priorities listed below:

• First priority: District owned facilities.

• Second priority: Facilities owned by member entities.

Third priority: Facilities owned by other public agencies.

• Fourth priority: Facilities owned by others in which access has been guaranteed to

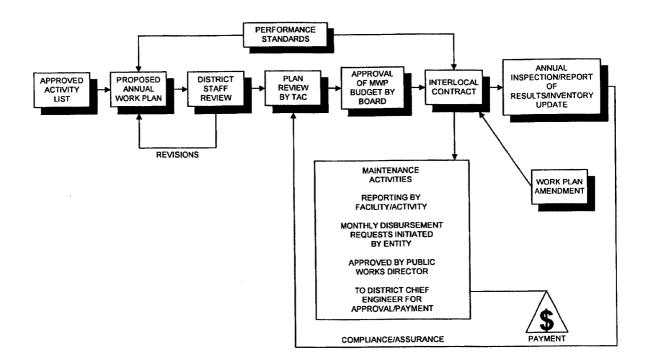

the lead member entity and the District.

• Fifth priority: Unimproved drainageways.

#### 4.12 Payment Procedures

Payment for work performed will be made in accordance with the annual interlocal contract executed as part of the approved work plan and the payment procedures outlined herein. The primary mechanism for payments shall occur through a purchase order established between the District and each member entity. In cases where the member entity directs the District to make payments to a contractor or supplier directly, the purchase orders will be established between the District and the contractor, consultant, or supplier, at the member entity's request. Unless otherwise contained within this manual, all District Policies and Procedures relating to disbursement of funds and payment to member entities apply.

# Funding Flow Diagram

Disbursement requests (invoices) must be accompanied by a verification statement from the member entity that the work for which payment is due has been completed in accordance with the standards contained in this manual. The disbursement request must identify the Master Plan facility maintained, specific plan activity or activities for which payment is sought, and separately identify personnel, equipment, and other related costs. (See Disbursement / Amended Annual Budget Request Form, which can be obtained electronically from the District.) Administrative costs incurred by the member entity in the management of the interlocal contract are not payable to the member entity. Examples include cost accounting work, secretarial/clerical work, the preparation of requests for payment, and certification statements for work performed under the contract.

All invoices from the member entity requesting payment to the member entity or direct payment to the member entity contractor or vendor must first be submitted to and approved by the member entity's Public Works Director or other designated responsible person in charge of the project. The Chief Engineer or designated District staff will process and approve such payments within 30 days providing all invoices have appropriate backup, and the required approval has been obtained and terms of the interlocal contract have been satisfied.

Direct payments to contractors must originate from the member entity and include the following:

- 1. Invoice to the member entity from the contractor.
- 2. Certification of work performed by the contractor signed by the member entity, if applicable.
- 3. Disbursement / Amended Annual Budget Request Form.

Monthly and annual summaries of purchase order balances, budget status, and facility expenditures shall be prepared by the District as a part of the routine financial reporting procedures to the Board.

Project Manager	Date

#### 4.20 ADMINISTRATIVE PROCEDURES

#### 4.21 **Purpose**

The purpose of this element of the Operations and Maintenance Manual is to provide specific procedures for establishing standards and levels of service, preparing the annual work plan, administrating the planning, approval and enforcement elements, and updating the manual over time. The principal role of the District shall be to review and approve annual maintenance work plans and monitor the performance of work activities. The principal role of the member entities shall be development of annual work plans that are consistent with the District's approved maintenance activity list; performance of the maintenance work set forth in the approved work plans; and the submittal of quarterly reports that summarize work performance while certifying compliance with maintenance activity performance standards as set forth in the Operations and Maintenance Manual.

#### 4.22 **Annual Work Plans**

In accordance with the schedule on the following page, each member entity shall submit a proposed annual maintenance work plan to the Chief Engineer containing the following components:

Part I: Maintenance Work Plan Summary - Summary of overall work

> plan listing specific projects (physical system inventory) and associated costs attributable to each. (See Appendix B, Exhibit A.)

Part II: Facility map(s) which identify location of projects (physical

system inventory) and planned maintenance work by project.

Part III: Maintenance Work Program Annual Budget - Individual

maintenance projects (physical system inventory) broken into maintenance activities to be completed, including narrative, and associated budgeted costs for all projects identified in Part I. (See

Appendix B, Exhibit A.)

District staff shall review the proposed plans and work with the member entities to resolve any discrepancies found with District maintenance standards and policy objectives. After the initial staff review, the plans shall be forwarded to the Technical Advisory Committee (TAC) and Citizens Advisory Committee (CAC). Lastly, the plans will be submitted to the Board for final approval.

The activities in the work plan shall be consistent with the District's approved activity list for maintenance of flood control and drainage facilities. Work plans should also describe locally funded work activities that may be linked to the District maintenance work activities to show overlapping areas of responsibility for personnel and equipment. Where local personnel and equipment are going to be used to perform both District funded activities and locally funded activities, the member entity will describe how these resources are to be managed and the procedures for tracking costs related to both sets of activities.

Member entities may contract for the performance of maintenance work activities. The proposed work plan must specify that a contractor is to be utilized and the time frame for selection of a contractor. In the event that maintenance work is performed under contract, the contract must specify that the District has the authority to inspect all work performed under the contract and approve or deny payments to contractors based on inspection findings.

All work performed must comply with District approved maintenance activity performance standards as set forth in subsequent sections of this Manual. The member entity is required, as a minimum, to inspect Master Plan facilities annually; including any maintenance work performed by member entities on Master Plan Facilities, and shall notify the District prior to the annual inspection of completed maintenance work. Member entities shall facilitate the inspection of maintenance work by the District. The District may withhold funding, require additional maintenance work, or seek repayment of disbursed funds when an inspection reveals that work activities were not performed in conformance with activity performance standards. The annual maintenance work plan schedule follows:

February 1	-	Submittal of preliminary work plan proposal and tentative budget to District staff for review, recommendations, and coordination with member entities. This is important for the following reasons:
		<ol> <li>Fiscal Year Budget Authority submittal and approval.</li> <li>Prioritization of maintenance funding activities.</li> </ol>
April 1	-	Submittal of tentative annual work plans, budgets, and interlocal contracts to District staff for review, recommendations, and coordination with member entities.
May (TAC deadline)	-	Submittal of the member entity's final annual work plans, budgets, and interlocal contracts to the TAC and CAC for approval.
June (Board meeting)	-	After receiving approval from the TAC and CAC, member entities' final annual work plans, budgets, and interlocal contracts are submitted to the Board of Directors for approval.
July 1	-	Beginning of maintenance plan contract period, which ends June 30.

Each member entity will submit quarterly reports indicating the status of the work completed under the current fiscal year's program. (See Quarterly Status Report Form.) The reports are due 30 days after the close of the quarter, and will be submitted to the Board for review. Also, each member entity shall submit an annual certification to the District stating that all work contained in the work plan and paid through the interlocal contract has been performed to the specifications established in this manual.

#### 4.23 Approval of Annual Work Plan

The work plans received by the District will be reviewed and budget requests compiled into a summary showing the dollar amount by member entity for each of the priority areas set forth in Section 4.11. The Chief Engineer shall review the total maintenance budget requests against the District's proposed annual total budget for facility maintenance and make a recommendation to the District Board as to the amount of maintenance funds to be disbursed to each respective member entity based upon equity and need.

Once the Technical Advisory Committee has reviewed the maintenance work plans and budget appropriation recommendation, the Chief Engineer will forward the compiled summary to the Board for consideration and approval as a key element of the Annual District Budget.

The Chief Engineer's report to the District Board shall show both the budget requested by the member entity and the recommended amount to be appropriated, the report will also make comments on any adjustments made to the initial request.

#### 4.24 Work Plan and Budget Amendments

Requests for amendments to approved work plans and budgets must be submitted to the Chief Engineer in writing. The amendment request must specify the work elements affected, describe the reasons for the amendment request, and describe the impact of the proposed amendment on the affected work plan objectives.

Formal approval of work plan and/or budget amendments requiring a reallocation of funds between facilities must be obtained from the Chief Engineer prior to submittal of payment requests. (See Disbursement / Amended Annual Budget Request Form.) The member entity shall also notify District staff of work plan and/or budget amendments within a facility. Requests requiring an increase in the overall work plan budget must be submitted to the Board for approval with a supplemental interlocal contract for the amended work in accordance with Chapter VI.A.2 of the District's **Policies and Procedures Manual**.

Amendment requests shall be reviewed by District staff and responded to in writing within 15 days of receipt of the original request.

### 4.25 Certification of Compliance

It is the intent of the District to rely to the maximum extent possible on the member entities to carry out the maintenance activities and comply "voluntarily" with the procedures and standards set forth in this manual. The District shall from time to time inspect facilities funded by the District or those on the Master Plan to assure compliance with the interlocal contract. Each member entity shall submit an annual certification to the District stating that all work contained in the work plan and paid through the interlocal contract has been performed to the specifications established in this manual. This certification shall be signed by the person executing the interlocal contract or their designee. The certification should summarize proposed and actual plan accomplishments. It should also describe any major maintenance problems that have implications for the District as a whole, such as significant deterioration of major conveyance system components or the failure of system components to perform as intended, and suggest revisions to the activity list provisions.

The certification and final payment requests shall be submitted to the District within 30 calendar days of the termination of the annual interlocal contract for maintenance funding.

### Final Accounting Report

# (ENTITY) MAINTENANCE WORK PROGRAM FINAL ACCOUNTING REPORT - FY 20XX-XX As of (Current Date)

VENDOR	P.O. NUMBER	P.O. AMOUNT	TOTAL EXPENDED	P.O. BALANCE
Sample Vendor I	123456 01	1,000.00	1,000.00	0.00
Sample Vendor 2	123456 02	1,000.00	500.00	500.00
Sample Vendor 3	123456 03	1,000.00	200.00	800.00
	Total	\$3,000	\$1,700	\$1,300

Total Encumbered	3,000.00	Total Expended		1,700.00
Total Unencumbered	\$1,000.00	Total Unexpended		\$1,300.00

Total Authorized	\$4,000.00
Expended	\$1,700.00
REPROGRAM FOR MWP	\$2,300.00

Regional Flood Control Distric	t	(Entity)	
	•		
RFCD	Date	Project Manager	Date

I certify that the above described maintenance was performed in accordance with the criteria/standards contained in the District's Operations and Maintenance Manual. Further, the information contained in this Final Accounting Report accurately reflects those costs incurred during the performance of this work. If there are any maintenance problems that have implications for the District as a whole, such as significant deterioration of major conveyance system components or failure of system components to perform as intended, a detailed description will accompany this report as an attachment.

#### 4.26 Interlocal Contract Document

The performance of work outlined in the approved maintenance plan shall be guided by an interlocal contract entered into annually between the District and each member entity. A sample contract is contained in Appendix B. Major provisions of the contract include: the adoption of the Board approved work plan as the document outlining the work to be performed; references to the performance standards, payment procedures, and plan amendment procedures outlined in this manual for governing maintenance work performance evaluations, and contract amendments; and a requirement for submittal of an annual certification of results.

#### 4.27 Contract for Maintenance Performance

If, in the opinion of the member entity, it appears to be most cost effective (or due to an emergency) to utilize the services of private contractors to perform maintenance functions, the member entity shall solicit bids from qualified contractors in compliance with their statutory procedures for the necessary work. All contracts for maintenance services shall be bid on an annual basis or for a specific project location. The member entity will provide the District with copies of bid specifications and bid tabulations as well as copies of the respective contract documents. The member entity shall advise the District in advance that they intend to utilize a private contractor (may be included as part of annual work plan). They shall also provide a summary of work performed and a statement of inspection as part of the request for payment to the member entity or directly by the District to the contractor. All expenditures must comply with NRS 332, Local Government Purchasing Act, NRS 338, the Public Works Act, and all relevant statutes, rules, regulations, and policies.

#### 4.30 MAINTENANCE PROCEDURES

#### 4.31 Purpose

As a part of the overall operations and maintenance procedures adopted by the District, an outline for specific maintenance procedures has been developed. The accepted maintenance procedures are centered around specific elements of a management system for field maintenance, and include defined maintenance activities, standards, scheduling, and reporting procedures.

Due to the diversity in physical features among the various agencies involved, and the varied resources employed in maintenance activities, it is essential to treat these procedures as general guidelines which must be tailored to meet the situation at hand. It is also essential that these procedures remain dynamic, be actively reviewed, and periodically updated. An annual review is recommended.

#### 4.32 Activities

Maintenance work activities identify all major maintenance work and include all activities which are performed frequently and in amounts that make them a significant part of the total work program. Each activity must be clearly defined so maintenance personnel at all levels of management uniformly understand the operation to be performed and the type of deficiency to be corrected.

Personnel who plan, schedule, perform, report, or evaluate maintenance work must know what each work activity means. Work activities are used for the following purposes:

- Planned maintenance work is identified in the annual maintenance work plan by activity name and number.
- Activity names and numbers are used for authorizing, assigning, and reporting work.
- Activity names and numbers are used on work scheduling guides and work performance summaries.

Work measurement units are established for the major maintenance activities. For example, "Acres Covered" is the work measurement unit for vegetation control while "Cubic Yards Removed" is the work unit for cleaning and reshaping channels. These measurement units are used to describe how much work is planned and to report how much work is accomplished for each activity.

For some activities, specific work measurement units--other than labor hours--would not be meaningful. For example, the miscellaneous maintenance activity includes a number of different operations. This activity cannot be measured by a common unit other than labor hours.

Following is the accepted maintenance Activity List for the District including work measure units.

ACTIVITY NUMBER	ACTIVITY NAME	WORK MEASURE UNIT
05	Inspect Channels	Miles
10	Clean and Reshape Channels	Cubic Yards
15	Repair Lined Channel	Each
20	Provide/Maintain Erosion Control	Square Feet
21	Provide/Maintain Dust Control	Acres
25	Clean and Inspect Detention/Debris Basins	Cubic Yards
30	Erosion Repair	Cubic Yards
35	Fence Repair	Linear Feet
40	Vegetation Control - Chemical	Acres
45	Vegetation Control - Mechanical	Acres
50	Maintain Access Road	Miles
55	Clean and Inspect Inlet/Outlet Structures	Each
60	Repair Inlet/Outlet Structures	Each
65	Clean Storm Sewer Lines	Linear Feet
70	Storm Sewer Repair	Repairs
75	Clean/Flush Culverts & Bridges	Each
80	Miscellaneous Work Activities	Labor Hours
85	Engineering	Labor Hours

#### 4.33 Standards

"Performance Standards" have been established for each of the major maintenance work activities. These performance standards specify:

- The most effective crew size.
- The kinds and number of equipment required.
- The major types of material that should be used.
- Recommended procedures for performing the work.
- An estimate of expected average daily accomplishment with standard crew size, equipment and procedures.
- Authorization and scheduling criteria.

Following is an item-by-item description of the format of the performance standards.

- 1. <u>Activity Identification/Date</u> The activity number and name are shown as well as the "effective date" of the performance standard--to be used when updating or replacing performance standards.
- 2. <u>Description and Purpose</u> The Description and Purpose section of the performance standard explains the work activity and the kinds of defects to be corrected or reasons for doing the work.
- 3. <u>Authorized By and Work Control Category</u> The level of management responsible for authorizing the work is identified. Certain activities requiring special equipment, coordination, or expertise are Engineer-authorized activities and should not be scheduled or performed without the Engineer's approval. The type of control to be placed on the quantity of work performed is identified. This control is unlimited or limited in terms of the amount of work done (accomplishment) or the amount of labor input (crew-day).
- 4. <u>Performance Criteria</u> This section includes important information for the "scheduler" about when to schedule the work and for the crew leader to identify the work to be done.
- 5. <u>Crew Size</u> The crew size outlines the numbers of personnel needed to do the work. The crew size is based on average conditions. Sometimes, there will be a need to add or delete people to satisfy special traffic safety conditions or hauling requirements.
- 6. Equipment The basic requirements for major pieces of equipment are listed. Situations such as the breakdown or unavailability of equipment or special materials hauling requirements may require the addition, deletion or substitution of equipment.
- 7. <u>Materials</u> The materials section includes a list of the major materials to be used for the activity.

- 8. Work Method The work method outlines, step-by-step, the recommended procedures for performing the work. Each step should be performed in order to correctly maintain the feature as well as provide the quality of work desired.
- 9. Average Daily Production The average daily production is an estimate of the amount of work a crew can accomplish during a day using the recommended crew size, equipment, materials and work method. This estimate is shown as a range and should be attainable over a period of time. Some days the accomplishment may be more or less than the estimate, but eventually, the average should fall in line.
- 10. Notes Any other relevant, helpful information or instructions.

#### Use of Performance Standards

Maintenance supervisory personnel should become thoroughly familiar with these performance standards. It is important that the performance standards be used when making assignments and performing work. Some situations will require deviation from the performance standards--such as more or less flagmen or additional haul trucks. These situations are recognized, and crew leaders are expected to consider such situations when organizing and managing their activities.

Haul truck needs should be determined using factors such as haul distance and time estimates (spot, dump, load, and cycle times).

The performance standards also provide guidance and a measure for supervisors to use when evaluating work in progress and completed.

Field personnel are in the best position to identify new or better work methods or difficulties with the current performance standards. These suggestions for improvements or questions should be directed to the crew leader or supervisor.

The performance standards should be reviewed and updated annually. If other changes occur that require more frequent review and update or development, the performance standards can be changed to suit these needs.

#### 4.34 Scheduling

The objectives of work scheduling are:

- To do the planned amount of work.
- To perform the work when it should be done.
- To do the work where it should be done.
- To use the proper people, equipment and supplies to do the work.
- To ensure to the extent possible that all flood control facilities are functioning at design capacity during a storm event, noting that Flash Flood Season is July through September.

Three tools are available to help supervisors meet these objectives. The WORK PROGRAM defines the estimated amount of work and the estimated labor-days required for each activity to provide the desired levels of service; a WORK CALENDAR helps to establish when the various activities should be done; and the PERFORMANCE STANDARDS provide information about quantity standards, personnel requirements and how much work can be done in a given time.

The annual work program establishes the kinds and amount of work to be done during the year and the resources that will be required to do that work. This annual plan needs to be broken into a monthly plan for effective scheduling of work and to permit timely evaluations of work program performance.

The process of "distributing" the annual work load throughout the year is done by allocating a part of the work (in labor-hours, by activity) to specific months. Some types of work -- emergency or service activities -- must be done throughout the year as the need arises. Other types of work must be done on a regularly scheduled basis -- such as preventive maintenance work. Finally, some types of work can be done during certain periods but can be shifted from one month to the other, and still other work can be done almost any time during the year.

These factors must be considered when distributing the different types of work. Preventive maintenance and other types of work which must be performed on a regularly scheduled basis are distributed so as to level labor power needs as much as possible. Finally, work which can be performed any time is distributed to those months with the fewest labor-days. In this way, staffing needs are kept as uniform as possible resulting in more efficient use of available labor power.

A work calendar lists -- activity by activity -- the labor-hours for each month. These labor-hours are used in conjunction with the work program annual work quantities for work scheduling and the preparation of periodic Activity Status Reports. (See Work Calendar Form.)

Once the work program and staffing levels have been set, the work load distribution can be finalized and the calendar prepared to summarize/communicate the planned monthly distribution of the work program.

Work scheduling is the process of using the work calendar and specific scheduling procedures to plan ahead, establish work priorities and accomplish the work.

The performance standards outlined in the previous sections apply to corrective and preventive maintenance activities. These procedures are not as rigid or foolproof as implied by the description. Equipment breakdowns, emergencies, or bad weather will disrupt a schedule -- but part of the scheduling process is to be aware that these situations will occur and to be prepared to respond with little or no difficulty. Because of these situations, supervisors should not expect to accomplish all of the work as scheduled. Generally, a supervisor can consider his/her scheduling efforts to be successful if 75 to 80 percent of the scheduled work is completed as planned.

1 certify that the above described maintenance will be performed in accordance with the criteria/standards contained in the District's Operations and Maintenance Manual. Further the information contained in this Work Calendar accurately reflects the time expected to be incurred during the performance of this work.

Project Manager	Date

Following are some additional hints or techniques to consider:

- It is not necessary to "formally schedule" the daily, routine activities. It is necessary, however, to regularly check the work reports and accomplishments to verify the distribution of work assignments. A periodic review and adjustment of the work assignments may be necessary to maintain a "balanced work load".
- It is usually best to prepare a schedule (and work assignments) assuming everything will work as planned -- no equipment breakdowns, no emergencies, etc. But make sure a backlog of "alternate" work is available so that little time is wasted when adjustments to the schedule must be made.
- Some guidelines for identifying alternate work:
  - O Low priority work that needs to be done, but not necessarily during the next week or so.
  - Work that does not require special equipment or a lot of preparation time.
  - o Preventive maintenance on light equipment.

Take time to estimate the amount of work needed and the number of hours required to do the work. Good estimates will improve the scheduling process significantly. The performance standards, inspections and sound judgment based on experience all help the estimating process.

ACTIVITY NUMBER	NAME		DATE		
05	INSPE	INSPECT CHANNELS			
DESCRIPTION & PURPOSE					
Inspect both improved and unimproved flood channels for proper cross-section, sedimentation, debris and erosion damage, in order to schedule cleaning or repairs as needed.					
AUTHORIZED BY		LIMITS ON WORK			
Maintenance Supervisor					
PERFORMANCE CRITERIA					
Perform complete inspection of channels on an annual basis and after major storm events.

### 4.35 Reporting

Comprehensive maintenance programs include procedures for reporting and summarizing work accomplished and labor-hours used for maintenance activities. This information enables managers and supervisors to compare actual performance with the planned work program. These planned-actual comparisons -- on a regular basis -- are essential for effective management and control of the work program.

The reporting procedures provide specific information:

- What Master Plan facility required work.
- What work was done by activity.
- How much of each activity was done.
- The labor-hours used to accomplish the work.

This information is used by managers in their effort to:

- Make sure the right kinds and amounts of maintenance work are done.
- Identify the problem areas and related corrective actions.
- Develop future work programs and budgets.
- Identify opportunities for improved productivity.

The work reporting process can consist of a simple form as outlined in the following section.

### Daily Work Activity Report

The Daily Work Activity Report may be used to record and summarize: (1) the kinds and amounts of work performed by maintenance personnel, and (2) the number of labor-hours used to do that work. The report can be used to summarize all work activities. Each member entity may use its standard accounting/reporting procedures for the Daily Work Activity Report.

The Maintenance Supervisor or crew leader usually prepares the Daily Work Activity Report. The following are instructions for the completion of the sample report. (See Daily Work Activity Report Form.)

1. <u>Identification Data</u> – Fill in all blanks: the member entity, date, name of person preparing the report, and the names and employee numbers of all persons to perform work to be reported for the day. (The form provides for several combinations of activities and employees. If additional pages are needed, number the pages accordingly).

- 2. <u>Master Plan Facility ID/Name</u> Enter the specific 4 letter-4 digit Master Plan Facility number and reach, which indicates the "from" and "to", if applicable. This number directly corresponds to the specific Master Plan location as identified on current Master Plan maps. Also, indicate the Facility Name.
- 3. <u>MWP Facility Number</u> Enter the identifying Maintenance Work Plan facility number. (This number directly corresponds to the budget approved for the facility and will typically include a range of Master Plan facilities and reach.)
- 4. <u>Activity Number</u> Enter the number of each activity performed. Use the Work Activity Directory or Performance Standards to complete the blank.
- 5. <u>Employee Number</u> Enter the employee number of the person working a specific activity at the specific facility.
- 6. Hours Worked by Each Employee Record the number of hours worked by each employee, by the appropriate activity. Record the time spent to the nearest quarter-hour. For example, record 1 hour and 45 minutes as 1.75 hours and 3 hours and 20 minutes as 3.25 hours.
- 7. Equipment Number Enter the assigned equipment number for any mechanical equipment on which work was performed for preventive and corrective maintenance only.
- 8. <u>Work Performed</u> Enter the location and a brief description of the work performed.
- 9. Accomplishment Measure and record the amount of work done for each activity. Use the correct measurement unit for each activity. (See the Activity List in Section 4.32.) Record the amount of work done to the nearest whole unit. Record labor-hours to the nearest hour. For activities with labor-hours as the unit of measure, the "quantity" will be exactly the same as "total hours" for the activity.
- 10. <u>Notes/Comments</u> Record any additional relevant information that may be of use in summarizing and analyzing work activity data.

The completed reports can be used for monthly summarization and report preparation, and serve as completion certification backup for the monthly force account payment billings.

### 4.40 INVENTORY PROCEDURES

### 4.41 Purpose

The purpose of this element of the <u>Operations and Maintenance Manual</u> is to provide a record of the existing physical flood control system that is eligible for maintenance funding assistance by the District. The physical facilities that make up the collection and conveyance system have in many instances been paid for in whole or in part by the District, however, they are not owned, operated, or maintained by the District. If, however, the total flood control system does not function properly when needed, it is ultimately the responsibility of the District to determine why and to take corrective action. A critical key in assuring the system functions properly is an upto-date inventory of the physical system.

### 4.42 Physical System

The member entities shall submit annual updates of the physical system inventory on the forms required by the District (See Appendix B, Exhibit A – Maintenance Work Plan Summary and Maintenance Work Program Annual Budget Form.) Facilities eligible for maintenance funding are those identified in the Regional Flood Control District's Master Plan and any revisions, amendments, and/or changes subsequently approved. Only those facilities that exist as Master Plan facilities, or exist in the same alignment as a proposed Master Plan facility and appurtenant facilities are eligible.

### 4.43 Physical System Maps

The individual member entities shall submit to the District a physical system map(s) as part of the Annual Work Plan as discussed in Section 4.22, or more frequently as project completion dictates, reflecting the size, location and material elements of their drainage and flood control system. The map(s) shall reflect that portion that is on the Master Plan and also those systems that are eligible for Regional Flood Control District funding under the categories shown in Section 4.11 of this manual. Physical system maps shall be provided to the District in a form that is readily reproducible.

# CLARK COUNTY REGIONAL FLOOD CONTROL DISTRICT OPERATIONS AND MAINTENANCE MANUAL

# CHAPTER 5 EMERGENCY FUNDING PROCEDURES

### 5.10 EMERGENCY FUNDING PROCEDURES

### 5.11 Purpose

This element of the <u>Operations and Maintenance Manual</u> provides the member entities with procedures to perform emergency restoration and rehabilitation immediately following a flood event. A principal role of the District shall be to support the member entities efforts to: (1) secure funding from state, federal, member entity reserves and private sources; and (2) facilitate required immediate repairs to regional flood control facilities without delay.

Projects eligible for District emergency restoration and rehabilitation funding are those included in the member entity's approved or amended Maintenance Work Program.

### 5.12 Procedures

If the governing body elects to declare an emergency, then the District, in accordance with NRS 332.112 (Emergency Contracts) will authorize and process emergency purchase orders to the maximum limit of unexpended funds upon written request by the member entity.

### APPENDIX B

# INTERLOCAL CONTRACT ANNUAL MAINTENANCE WORK PROGRAM

THIS CONTRACT, made and entered into this day of, 20, by and
between the [legal name of CITY or COUNTY], a political subdivision of the State of Nevada,
hereinafter referred to as "CITY" (or "COUNTY"), and the CLARK COUNTY REGIONAL
FLOOD CONTROL DISTRICT, hereinafter referred to as "DISTRICT".

### WITNESSETH:

WHEREAS, pursuant to Chapter 543 of the Nevada Revised Statutes, the DISTRICT may approve and fund projects to maintain flood control improvements; and

WHEREAS, the <u>CITY</u> (or <u>COUNTY</u>) desires to maintain flood control improvements within the CITY (or <u>COUNTY</u>) in accordance with the maintenance program set forth herein, and hereinafter referred to as "Project"; and

WHEREAS, the facilities upon which maintenance will be done are facilities described in the DISTRICT'S Master Plan.

NOW, THEREFORE, in consideration of the covenants, conditions, agreements, and promises of the parties hereto, the DISTRICT authorizes the Project as it is mutually understood and agreed as follows:

### **SECTION I - SCOPE OF PROJECT**

This Interlocal Contract applies to the maintenance of flood control facilities, which are identified in the DISTRICT'S Master Plan facilities including updates and amendments subsequently approved. The basic maintenance to the facilities will be in accordance with performance standards set forth in the current DISTRICT Operations and Maintenance Manual.

The Project is more specifically described in Exhibit "A" which is attached hereto and by this reference incorporated herein.

### **SECTION II - PROJECT COSTS**

The DISTRICT agrees to make payment for Project costs within the limits specified below:

1. The Project costs shall not exceed \$\_\_\_\_\_\_.

The amounts allocated to each individual facility within the Project must be specified in Exhibit "A". Any changes to said allocated amounts must be approved by the DISTRICT'S Chief Engineer in accordance with Section 4.24 of the DISTRICT *Operations and Maintenance Manual*.

A written request must be made to the DISTRICT and a Supplemental Interlocal Contract approved to increase the amount noted above prior to payment of any additional funds.

2. The <u>CITY</u> (or <u>COUNTY</u>) and DISTRICT will comply with Section 4.12 of the Operations and Maintenance Manual. In accordance with said manual the <u>CITY</u> (or <u>COUNTY</u>) shall submit invoices together with a detailed summary report of the maintenance service performed. The <u>CITY</u> (or <u>COUNTY</u>) shall submit an invoice voucher in the manner prescribed by the DISTRICT. The vouchers shall include such information as is necessary for the DISTRICT to determine the nature of all expenditures. Each voucher will clearly indicate that it is for services rendered in performance under this contract. Each voucher will also be accompanied by a written certification from the <u>CITY</u> (or <u>COUNTY</u>) stating that it is for performance of maintenance activities under this contract and is composed of completed elements set forth in the annual work program.

All invoices must be submitted for payment to:

Clark County Regional Flood Control District Accounts Payable 600 S. Grand Central Parkway, Suite 300

Las Vegas, Nevada 89106-4511

Payment shall be considered timely if made by the DISTRICT within 30 days. Pursuant to Section IV, Paragraph 8, the DISTRICT may, in its sole discretion, withhold payments to the CITY (or COUNTY) for services rendered if the CITY (or COUNTY) fails to satisfactorily comply with any term or condition of this contract and/or the DISTRICT Operations and Maintenance Manual.

### **SECTION III - PROJECT TIME**

The CITY (or COUNTY) agrees to perform the Project to the satisfaction of the
DISTRICT between July 1, 20 and June 30, 20 The DISTRICT may grant
extensions or terminate this contract and require all sums advanced to the CITY (or COUNTY)
to be repaid if the <u>CITY (or COUNTY)</u> fails to perform by said date.

### **SECTION IV - GENERAL**

1. The <u>CITY (or COUNTY)</u> will complete the Project as set forth in Exhibit "A". The <u>CITY (or COUNTY)</u> staff personnel responsible for coordination of work under this contract are as listed below:

(list names and titles of CITY or COUNTY staff)

It is understood that staff named above will be responsible for work coordination throughout the period of this contract unless the DISTRICT is informed in writing of changes in these personnel assignments.

- 2. The <u>CITY (or COUNTY)</u> will comply with Local Purchasing Act, Chapter 332 and Public Works Projects, Chapter 338, of the Nevada Revised Statutes.
- 3. Applicable portions of the current editions of the Operations and Maintenance Manual, Policies and Procedures Manual, Hydrologic Criteria and Drainage Design Manual, and Uniform Regulations for the Control of Drainage adopted by the DISTRICT will apply unless specifically superseded by this CONTRACT.
- 4. It is the intent of the DISTRICT that scheduling of maintenance and repair of drainage and flood control facilities in general and Master Plan Facilities specifically be coordinated among member entities. Therefore, in those cases where Master Plan approved, and DISTRICT-funded projects have regional flood control significance impacting more than one member entity, the <u>CITY (or COUNTY)</u> will allow all impacted member entities an opportunity to review the maintenance schedule in order to coordinate maintenance efforts.
- 5. The Chief Engineer or designee of the DISTRICT shall be responsible for monitoring the performance of the <u>CITY (or COUNTY)</u>, approval for payment of billings and expenses submitted by the <u>CITY (or COUNTY)</u> and the acceptance of any report provided by

the <u>CITY</u> (or <u>COUNTY</u>). The <u>CITY</u> (or <u>COUNTY</u>) shall be responsible for monitoring performance of <u>CITY</u> (or <u>COUNTY</u>) staff or private contractors.

- 6. Accurate documentation of all work performed and payments made will be maintained by the <u>CITY</u> (or <u>COUNTY</u>) for a period of three (3) years in hard copy form after final project approval and payments. Following the three year period, the <u>CITY</u> (or <u>COUNTY</u>) shall keep records for permanent storage in original form, in microfilm/fiche media, or an electronic format.
- 7. The <u>CITY</u> (or <u>COUNTY</u>) shall provide right of access to its facilities to the DISTRICT or Chief Engineer at all reasonable times, in order to monitor and evaluate performance, compliance, and/or quality assurance under this contract.
- 8. In the event the <u>CITY (or COUNTY)</u> fails to perform the maintenance according to the standards specified in this contract and in the DISTRICT *Operations and Maintenance Manual*, the DISTRICT may perform or cause to be performed the maintenance necessary to assure proper operation of the facility. Costs incurred by the DISTRICT shall be reimbursed by the <u>CITY (or COUNTY)</u> or be deducted from the amount authorized by this contract. The DISTRICT may not exercise this right without giving the <u>CITY (or COUNTY)</u> specific written notice of the maintenance required and allowing the <u>CITY (or COUNTY)</u> 60 days within which to perform said maintenance. The notice required by this provision must be sent to:

insert name of City or County staff)
(insert title)
(insert title)

- 9. The records of the <u>CITY (or COUNTY)</u> and/or private contractors pertaining to the subject matter of this contract shall at all reasonable times be subject to inspection and audit by the DISTRICT or an Agent of the DISTRICT.
- 10. If any provision of this contract shall be deemed in conflict with any statute or rule of law, such provision shall be deemed modified to be in conformance with said statute or rule of law.

- 11. The <u>CITY (or COUNTY)</u>, its employees, and representative shall at all times comply with all applicable laws, ordinances, statutes, rules, and regulations in effect at the time work is performed.
- 12. The <u>CITY (or COUNTY)</u> hereby agrees to reimburse the DISTRICT if funds are received from other sources for maintenance and repair of drainage and flood control facilities paid for by the DISTRICT.
- 13. The DISTRICT will not be responsible for any fines and/or penalties caused by the actions or inactions of <u>CITY (or COUNTY)</u> employees, consultants, contractors, or agents.
- 14. Any costs found to be improperly allocated to the Project will be refunded by the CITY (or COUNTY) to the DISTRICT.
- 15. It is specifically understood and agreed to by and between the parties hereto that it is not intended by any of the provisions of any part of this contract to create in the public or any member thereof a third party beneficiary hereunder, or to authorize anyone not a party to this contract to maintain a suit for personal injuries or property damage pursuant to the terms or provisions of this contract.
- 16. Up to the limits set forth in NRS Chapter 41, the <u>CITY (or COUNTY)</u> will indemnify and defend the DISTRICT against and from any and all claims and demands of whatsoever nature which arises out of allegations of negligence or misconduct of <u>CITY (or COUNTY)</u> officers, employees or agents, related to or under this Contract which results from injury to or death of any persons whomsoever, or against and from damage to or loss or destruction of property.

IN WITNESS WHEREOF, the parties have caused this contract to be executed the day and year first above written.

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

HEC-1 INPUT

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE. THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION NEW OPTIONS: DAMBERAK OUTFLOW SUBMERGENCE, SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY, DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

HEC-1 INPUT

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE, SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL
LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

```
CLARK COUNTY REGIONAL FLOOD CONTROL DISTRICT 2002 MASTER PLAN UPDATE
C-1 WATERSHED
C-1 WATERSHED

RECOMMENDED DRAINAGE SYSTEM WITH ULTIMATE DEVELOPMENT

INPUT FILE = CISDN4B.DAT

INPUT FILE DATE = APRIL 18, 2002

DESIGN STORM = 100-YEAR 6-HR STORM

STORM DISTRIBUTION = SDN #4

MODELED BY = LOUIS BERGER GROUP (RYAN R. BELSICK, P.E. and SYNDI DUDLEY, PHD. P.E.)
STORM CENTERING = NO STORM CENTERING
```

REFERENCED HYDROLOGIC MODELS: PREDESIGN REPORT FOR THE BLACK MOUNTAIN AND MISSION HILLS DETENTION BASINS AND OUTFALL STRUCTURES (VTN 1992) SNWA RIVER MOUNTAINS WATER TREATMENT FACILITY DRAFT TECHNICAL DRAINAGE STUDY (MONTGOMERY WATSON/CH2MHILL 1997)

Warning: The energy equation could not be balanced within the specified number of iterations. program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than  $1.0~{\rm ft}~(0.3~{\rm m})$ . between the current and previous cross

This may indicate the need for additional cross sections.

Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth. CROSS SECTION RIVER: Main REACH: Inflow RS: 1138 INPIIT Description:

# STANDARD GENERAL NOTES

F: \504-424\dwg\Hydro\improv\NEDB\_G03.dwg

ALL CONSTRUCTION AND MATERIALS FOR THIS PROJECT SHALL BE IN ACCORDANCE WITH THE "UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS", CLARK COUNTY AREA, NEVADA LATEST EDITION, AND THE "UNIFORM DRAWNINGS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS", CLARK COUNTY AREA, NEVADA LATEST EDITION, UNILESS OTHERWISE SPECIFIED BY NOTE ON THE PLANS AND/OR SPECIAL PROMSIONS.

10-17-07 12:13:33

- 48 HOURS PRIOR TO START OF CONSTRUCTION, THE CONTRACTOR SHALL CONTACT: LOS ANGELES DEPARTMENT OF WATER AND POWER PHONE NEVADA POWER COMPANY PHONE SOUTHERN NEVADA WATER AUTHORITY PHONE
- SOUTHERN NEVALA WAREA ANTINGETT

  COCATIONS OF UNDERGROUND UTILITIES SHOWN ON THE DRAWINGS WERE OBTAINED FROM INFORMATION RECEIVED FROM THE
  APPLICABLE UTILITY COMPANIES NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR UTILITIES OR STRUCTURES
  NOT SHOWN, OR FOR UTILITIES OR STRUCTURES NOT SHOWN AT ACTUAL LOCATIONS ON THE DRAWINGS. EXISTING SERVICE LATERALS
  ARE NOT SHOWN ON THESE DRAWINGS, CONTRACTOR TO VERIFY THE EXACT LOCATION OF UTILITIES PRIOR TO START OF
  CONSTRUCTION. THE CONTRACTOR'S RESPONSIBILITY FEGARATION UTILITIES SHALL BE AS REQUIRED UNDER SECTION 107.17 OF THE
  UNIFORM STANDARD SPECIFICATIONS FOR CLARK COUNTY AREA, NEVADA AND AS PROMODED IN THE SPECIFICATIONS.
- THE NEVADA POWER COMPANY SHALL BE RESPONSIBLE FOR THE RELOCATION OF UNDERGROUND OR OVERHEAD POWER LINES THAT INTERFERE WITH THE REQUIRED IMPROVEMENTS AS SHOWN ON THE PLANS.
- REMOVAL OR RELOCATION'S OF POWER POLES, TELEPHONE POLES, JOINTY-OWNED POLES, AND APPURTENANCES WHICH INTERFERE INTERFERE WITH IMPROVEMENTS REQUIRED TO BE CONSTRUCTED UNDER THIS CONTRACT, SHALL BE THE RESPONSIBILITY OF THE RESPECTIVE UTILITY COMPANIES FAR ENOUGH IN ADVANCE AS TO NOT IMPACT THE SCHEDULE.
- THE PLANS DO NOT SHOW ALL SEWER LATERALS, SEWER FORCE MAINS AND WATER SERVICE LATERALS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY REPAIRS OR RELOCATION'S OF LATERALS BROKEN OR IN COMPLICT WITH THE PROPOSED CHANNEL STORM DRAIN OR ROADWAY CONSTRUCTION. IF SEWER OR WATER LIMES WITHIN THE PUBLIC UTILITY EASEMENTS REQUIRE REPAIRS, ALL SUCH REPAIRS WILL BE DONE IN ACCORDANCE WITH PUBLIC WORKS DEPARTMENT STANDARDS.
- UNLESS OTHERWISE SHOWN ON THE CONTRACT DRAWINGS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OR RELOCATION OF ALL WATER SERVICES AND METERS WHICH INTERFERE WITH IMPROVEMENTS SHOWN ON THE CONTRACT DRAWINGS.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERTICAL ADJUSTMENT OF ALL ENSING SANITARY, WATER AND STORM SEWER MANHOLES TO THE FINAL FINISH GRADES IN ACCORDANCE WITH SECTIONS 609 AND 630 OF THE "STANDARD SPECIFICATIONS".
- CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSITION BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINAGE AND OF INGRESS AND EGRESS TO SAID CONSTRUCTION. EXTENT OF TRANSITIONS TO BE DETERMINED BY THE CITY ENGINEER.
- THE CONTRACTOR SHALL DETERMINE THE LOCATION AND DEPTH OF SUSPECTED UTILITY INTERFERENCES, AND SHALL FURNISH INFORMATION ON THE SAME TO THE ENGINEER, NOT LESS THAN TEN (10) DAY PRIOR TO THE ANTICIPATED IMPACT OF THESE SUSPECTED INTERFERENCE'S ON HIS WORK, IF CONFLICTS EXST, THE CONTRACTOR WILL IMMEDIATELY CONTACT THE ENGINEER AND PROVIDE THE ENGINEER WITH ALL THE NECESSARY DATA SUCH AS ELEVATIONS, HORIZONTAL LOCATIONS, ETC., AND PROVIDE THE ENGINEER WITH SKETCHES INDICATING THE PROPOSED IMPROVEMENT AND THE UTILITY CONFLICT. THE ENGINEER MILL EXAMINE AND REVIEW ALL THE DATA AND SKETCHES PROVIDED, AND WILL PROVIDE THE CONTRACTOR WITH AN ALTERNATIVE DESIGN WITHIN FIVE (5) DAYS AFTER RECEIPT OF DATA AND SKETCHES.
- BEFORE ANY WORK IS STARTED IN THE RIGHT-OF-WAY, THE CONTRACTOR SHALL INSTALL ALL ADVANCE WARNING SIGNS FOR THE CONSTRUCTION ZONE. ALL CONSTRUCTION SIGNING, BARRICADING, AND TRAFFIC SHALL CONFORM TO THE "NEVADA TRAFFIC CONTROL MANUAL". CURRENT EDITION AND TO THE "MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES" CURRENT EDITION AND THE "MANUAL" OF UNIFORM TRAFFIC CONTROL DEVICES" CURRENT EDITION AND BE APPROVE BY THE CITY OF HENDERSON BEFORE CONSTRUCTION BEGINS.
- WORK IN PUBLIC STREETS, ONCE BEGUN, SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT PROPERTY OWNERS AND TO THE TRAVELING PUBLIC.
- THE CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING IMPROVEMENTS FROM DAMAGE AND ALL SUCH IMPROVEMENTS DAMAGED BY THE CONTRACTOR'S OPERATION SHALL BE REPAIRED OR RECONSTRUCTED TO THE ENGINEER'S SATISFACTION AT THE EXPENSE OF THE CONTRACTOR.
- SALISTACTION AND REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES NOT DELINEATED ON THE CONTRACT DRAWINGS SHALL BE THE CONTRACTOR'S RESPONSIBILITY, REPLACEMENT OF SURVEY MONUMENTS OR PROPERTY STAKES SHALL BE DONE TO THE CON-
- THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTIES FROM ANY AND ALL DAMAGE THAT MAY OCCUR FROM STORM WATER RUNOFF AND/OR DEPOSITION OF DEBRIS RESULTING FROM ANY AND ALL WORK IN CONNECTION WITH PROJECT CONSTRUCTION.
- ALL LENGTH OF STORM DRAIN AND SEWER PIPE IS MEASURED HORIZONTALLY FROM CENTER OF MANHOLE TO CENTER OF MANHOLE, UNLESS OTHERWISE NOTED.

Re: CLOMR for the Northeast C-1 Detention Basin (CLOMR Case# 08-09-0093R)

Dear Mr. Tohme:

This letter is in response to your letter, dated November 1, 2007, regarding the Conditional Letter of Map Revision (CLOMR) for the Northeast C-1 Detention Basin. The comments listed below are being addressed, so the review of our request can be continued.

Our preliminary review revealed that the area of revision is currently "1. Comment: shown on the effective Flood Insurance Rate Map as within the unincorporated areas of Clark County. Please provide community acknowledgement in the form of a letter stating that Clark County officials have reviewed the revision request and understand the effects of the flooding conditions in the community. revision on Application/Certification Form 1, entitled: "Overview & Concurrence Form," signed by a Clark County official. Alternatively, if the revision area has been annexed by the City of Henderson, please provide official annexation documentation, including a map reflecting the new corporate limits for the City of Henderson, to show that this area has been annexed by the City of Henderson."

Response: The Conditional Letter of Map Revision (CLOMR) for the Northeast C-1 Detention Basin has been sent to Clark County for concurrence. Community acknowledgement from Clark County, as requested in the above comment, will be forwarded to you upon receipt.

Comment: "2. Our preliminary review revealed an increase in the width of the Special Flood Hazard Area (SFHA), the area that would be inundated by base (1-percent-annual-chance) flood, for the Upper Berm Tributary. Please submit documentation of individual legal notice distributed by Clark County officials and/or officials from the City of Henderson to all property owners affected by the increase in SFHA width, or a letter signed by Clark County officials and/or officials from the City of Henderson stating that all affected property owners have been notified."

Michael Baker Jr., Inc. FEMA Map Coordination Contractor January 29, 2008 Page 2

Response: The U.S. Bureau of Reclamation (BOR) and U.S. Bureau of Land Management (BLM) went through the process of review of right-of-way grant applications including accompanying environmental evaluations showing the flood control facilities and corresponding right-of-way areas. The processes are complete and approval has been obtained for the right-of-way for the flood control facilities. Letters advising the BOR and BLM of the map revisions with this CLOMR have been included in the Appendix.

### Comment:

"3. Our preliminary review revealed that the submitted proposed conditions HEC-1 hydrologic computer analysis was modeled using a 100-year, 6-hour storm. Because the submitted HEC-1 analysis includes the proposed Northeast C-1 (NE C-1) detention basin, which is used to reduce the peak discharge of the base flood, please provide documentation that the NE C-1 detention basin was designed using the critical storm duration that would yield the maximum reservoir stage or maximum reservoir outflow during the design storm."

Response: Per our conversation on December 12, 2007, 24-hour and 3-hour storm durations were analyzed to satisfy this comment. HEC-1 models C1SDN3B-alt3 and C1SDN4B-alt3 (previously submitted in this CLOMR) were edited with 3-hour and 24-hour storm distributions and precipitation values in order to determine the maximum reservoir stage and maximum reservoir outflow. The 3-hour rainfall distribution used in this analysis was previously used in Clark County before current the 6-hour rainfall distribution was adopted. The SCS Type II rainfall distribution was used for the 24-hour analysis. Point precipitation values for the 3-hour and 24-hour storm durations were referenced from NOAA Atlas 14. The results of the analyses show the 6-hour storm duration in HEC-1 model C1SDN3B-alt3 yields the maximum reservoir stage (1983.89 feet at 6.83 hours) and outflow (208 cfs). Note that the 6-hour HEC-1 model C1SDN3B-alt3 was provided in the previous submittal. HEC-1 output, rainfall distributions, and precipitation values are included in the Appendix.

### Comment:

- The submitted topographic work map entitled: "City of Henderson, Northeast C-1 "4. Detention Basin CLOMR, Upper Berm Normal Depth Cross Sections," prepared by your firm, dated October 16, 2007, does not provide essential information required to complete our review of this request. Please submit a work map for the unnamed tributary to C-1 channel (upper berm tributary) that includes topographic information and all applicable items listed on page 2 of Application/Certification Form 2, entitled: "Riverine Hydrology & Hydraulics Form," including:
  - The locations and alignments of cross sections used in the hydraulic a. model:
  - The flow line used in the hydraulic model; b.
  - Certification by a registered professional engineer; and C.
  - The topographic contour information used for the boundary delineation of d. the base flood.

Michael Baker Jr., Inc. FEMA Map Coordination Contractor January 29, 2008 Page 3

Response: Figure 8R2, Upper Berm Work Map, has been revised to include the flow line and locations and alignments of cross sections used in the approximate methods analysis. The analysis was conducted with approximate methods using normal depth calculations to determine the approximate 100-year SFHA boundary for the upper berm tributary area. Certification of data and work maps included in the Northeast C-1 Detention Basin CLOMR is provided on page 2 of 2 of MT-2 Form 1, Overview and Concurrence Form. Topographic contours used in the normal depth analysis are 5-foot contours created by Clark County from data collected from the 1996 orthophotos. The contour elevations are based on 1983 North American Datum. Figure 8R2 is included in the Appendix.

Comment:

The proposed conditions hydraulic model for the upper berm tributary was run using a supercritical flow regime. FEMA accepts base floodplain boundary delineations based on critical flow depths only for concrete-lined, engineered channels. Because the reach is not concrete-lined, critical depth is the minimum depth permissible to map the base floodplain boundary delineations for this reach. Please revise the submitted hydraulic analysis to use the subcritical flow regime. In addition, please revise the topographic work map to reflect the proposed conditions base floodplain boundary delineations based on the results of the revised hydraulic model."

Response: Normal Depth Calculations were used to determine the 100-year SFHA boundary for the upper berm tributary area. For flow depths generated by normal depth analyses that resulted in supercritical flows, critical flow conditions were reported. Thus, the normal depths reported in the analysis for the upper berm tributary are for critical flow conditions or subcritical flow conditions.

Comment: "6.

The submitted report entitled: "Northeast C-1 Detention Basin Conditional Letter of Map Revision (CLOMR)," prepared by your firm, dated October 16, 2007, did not contain topographic work maps for the submitted proposed conditions HEC-RAS and WSPGW hydraulic models. Please submit topographic work maps, certified by a registered professional engineer or licensed land surveyor, for the proposed conditions HEC-RAS and WSPGW hydraulic models."

Response: Topographic work maps WM-1 through WM-14 have been prepared for the proposed conditions WSPGW and HEC-RAS models. The WSPGW model for the NE C-1 CLOMR has been revised. WSPGW model PRE-FINAL2.out has been prepared for the latest NE C-1 Outfall submittal to the City of Henderson and Clark County Regional Flood Control District, dated November 8, 2007. WSPGW calculations are included in the Appendix. As stated in the response to Comment No. 4, certification of data and work maps included in the Northeast C-1 Detention Basin CLOMR is provided on page 2 of 2 of MT-2 Form 1, Overview and Concurrence Form.

The submitted report referenced in Item 6 shows that the proposed channel will Comment: "7. cut off flow to the Drake Channel. Please provide hydrologic and hydraulic Michael Baker Jr., Inc. FEMA Map Coordination Contractor January 29, 2008 Page 4

analyses showing the effects of the proposed channel on the Drake Channel. In addition, please provide a hydrologic drainage area map and topographic work map, certified by a registered professional engineer or licensed land surveyor."

Response: HEC-RAS model Drake.prj was provided to G. C. Wallace by the CCRFCD to represent the existing Drake Channel. HEC-RAS model drake12908.prj was created from the existing model and was modified using 100-year existing condition flows referenced from Figures E-5 and E-6 in the City of Henderson's 2005-2006 Local Drainage Master Plan Project. The existing conditions in HEC-1 model C1E3.dat from the referenced report are based on future curve number values with only existing local and CCRFCD facilities in place, and are consistent with post-project drainage patterns presented in this CLOMR. The HEC-RAS model drake12808.prj shows existing condition flows are contained within the Drake Channel. Work Maps showing HEC-RAS cross-section locations and water surface elevations created from existing Drake Channel improvement plans provided by the CCRFCD have been included in the Appendix. Sheets DR-1 to DR-2 show where additional cross-section points were created from project topography using 1988 datum. Figures E-5 and E-6 and excerpts from HEC-1 model output C1E3.out from the referenced report are included in the Appendix. HEC-RAS model drake12908.prj output and electronic files are included in the Appendix.

If you have any questions or require additional information, please contact us at 804-4381.

Very truly yours,

Letters Advising U.S. Bureau of Reclamation and U.S. Bureau of Land

Management of SFHA Revisions

January 25, 2008

Mark Chatterton BLM – Las Vegas Field Office 4701 North Torrey Pines Las Vegas, NV 89130

NORTHEAST C-1 DETENTION BASIN PROJECT – NOTIFICATION OF CHANGES TO 100-YEAR FLOODPLAIN BOUNDARIES ON ASSESSORS PARCEL NO. 179-01-000-001.

Dear Mr. Chatterton:

I am writing to provide notification as to changes to the 100-year flood plain boundaries on your property, as identified in Assessors Parcel Number 179-01-000-001, due to construction of the Northeast C-1 (NE C-1) Detention Basin project. The Flood Insurance Rate Map (FIRM) for a community depicts land determined to be subject to a one percent (100-year) or greater chance of flooding in any given year. The FIRM is used to determine flood insurance rates and to help the community with floodplain management.

The City of Henderson (COH) is planning to construct an 11-foot high berm within the River Mountains as a part of the Northeast C-1 Detention Basin project in Henderson, Nevada. The purpose of the berm is to eliminate an existing flow split within the River Mountains and direct all flows north along a natural wash and ultimately to the NE C-1 Detention Basin. Construction of the berm will result in approximately 23.7 acres of the referenced parcel added to the one percent annual chance Special Flood Hazard Area (SFHA). The attached exhibit shows the proposed changes to the one percent annual chance SFHA.

COH is applying for a Conditional Letter of Map Revision (CLOMR) from the Federal Emergency Management Agency (FEMA) to revise FIRM Map Number 32003, Panels 2615 E and 2620 E for Clark County, Nevada, and Incorporated Areas resulting from constructing the NE C1 Detention Basin project.

If you have any questions or concerns about the proposed changes or its effects on your property, you may contact me at 702-267-3063.

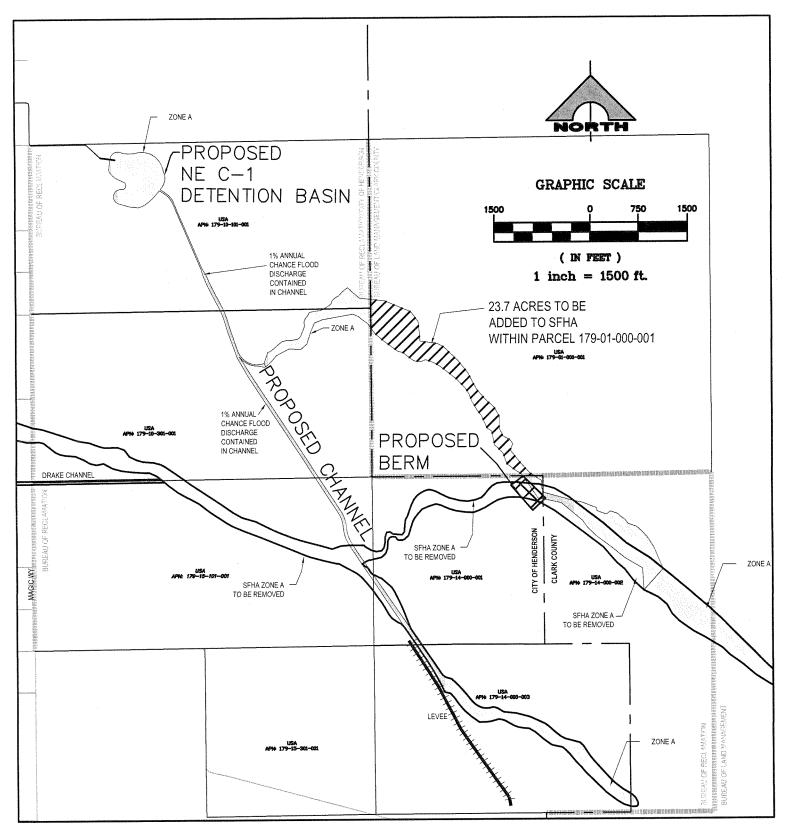

Sincerely,

Lance Olson

PROPOSED SFHA CHANGES WITHIN **BLM LAND** 

January 25, 2008

Bureau of Reclamation Lower Colorado Regional Office PO Box 61470 Boulder City, NV 89006

NORTHEAST C-1 DETENTION BASIN PROJECT – NOTIFICATION OF CHANGES TO 100-YEAR FLOODPLAIN BOUNDARIES ON ASSESSORS PARCEL NOS. 179-10-101-001, 179-10-301-001, 179-15-101-001, 179-14-000-001, AND 179-14-000-002

To Whom it May Concern:

I am writing to provide notification as to changes to the 100-year flood plain boundaries on your property, as identified in Assessors Parcel Numbers 179-10-101-001, 179-10-301-001, 179-15-101-001, 179-14-000-001, and 179-14-000-002 due to construction of the Northeast C-1 (NE C-1) Detention Basin project. The Flood Insurance Rate Map (FIRM) for a community depicts land determined to be subject to a one percent (100-year) or greater chance of flooding in any given year. The FIRM is used to determine flood insurance rates and to help the community with floodplain management.

The City of Henderson (COH) is planning to construct the NE C-1 Detention Basin project in Henderson, Nevada. The proposed improvements consist of an upper berm, a concrete-lined collection channel, the NE C-1 Detention Basin, and a storm drain outfall facility to convey flows to the existing C-1 Channel downstream. Construction of the NE C-1 Detention Basin will result in approximately 17.4 acres of parcel 179-10-101-001, 10.3 acres of parcel 179-10-301-101, 1.5 acres of parcel 179-15-101-001, 0.6 acres of parcel 179-14-000-001, and 6.9 acres of parcel 179-14-000-002 added to the one percent annual chance Special Flood Hazard Area (SFHA). The attached exhibit shows the proposed changes to the one percent annual chance SFHA.

COH is applying for a Conditional Letter of Map Revision (CLOMR) from the Federal Emergency Management Agency (FEMA) to revise FIRM Map Number 32003, Panels 2615 E and 2620 E for Clark County, Nevada, and Incorporated Areas resulting from constructing the NE C1 Detention Basin project.

If you have any questions or concerns about the proposed changes or its effects on your property, you may contact me at 702-267-3063.

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

HEC-1 INPUT

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL
LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

\*\*\*\*\*\*\*\*\*\*\*\*

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HECIGS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.

THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRANT7 VERSION

NEW OPTIONS: DAMBREAR OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,

DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL

LOSS RATE:GREEN AND AMPT INFILTRATION

KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

HEC-1 INPUT

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.

THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE, SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.

THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE, SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL
LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

HEC-1 INPUT

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.

THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

# FEDERAL EMERGENCY MANAGEMENT AGENCY

# RIVERINE HYDROLOGY & HYDRAULICS FORM

O.M.B No. 3067-0148 Expires September 30, 2005

# PAPERWORK REDUCTION ACT

Public reporting burden for this form is estimated to average 3 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, SW, Washington DC 20472, Paperwork Reduction Project (3067-0148). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. Please do not send your completed survey to the above address.

No	te: Fill out one form for each flood	ing source studied

# C. MAPPING REQUIREMENTS

A certified topographic map must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions); location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach a copy of the effective FIRM and/or FBFM, annotated to show the boundaries of the revised 1%- and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%- and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area of revision.

### D. COMMON REGULATORY REQUIREMENTS

1.	For CLOMR requests, do Base Flood Elevations (BFEs) increase?	☐ Yes ⊠ No
	For CLOMR requests, if either of the following is true, please submit evidence of compliance with Section 65.12 of to the proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot.  The proposed project encroaches upon a SFHA with BFEs established and would result in increases above 1.	
2.	Does the request involve the placement or proposed placement of fill?	☐ Yes ☒ No
	If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from flo NFIP regulations set forth at 44 CFR 60.3(a)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for respectively.	oding in accordance with the
3.	For LOMR requests, is the regulatory floodway being revised?	☐ Yes ⊠ No
	If Yes, attach evidence of regulatory floodway revision notification. As per Paragraph 65.7(b)(1) of the NFIP Regulator requests involving revisions to the regulatory floodway. (Not required for revisions to approximate 1%-annual-ch Zone A designation] unless a regulatory floodway is being added. Elements and examples of regulatory floodway refound in the MT-2 Form 2 Instructions.)	nance floodplains [studied
4.	For LOMR requests, does this request require property owner notification and acceptance of BFE increases?	☐ Yes ☒ No
	If Yes, please attach proof of property owner notification and acceptance (if available). Elements of and examples can be found in the MT-2 Form 2 Instructions.	of property owner notification

   PROJECT DATA
Project Title: C-1 FIS Restudy-Drake Channel 12908
Project File : drake12908.prj
Run Date and Time: 1/29/2008 1:01:18 PM
   Project in English units
   Project Description:
Drake Channel from confluence of C-1 to system headworks, 9000 ft east.
   PLAN DATA
   Plan Title: Plan 05

                      Geometry Title: Drake Channel Geometrics revised C Geometry File : f:\504-424\Drainage\CLOMR\HEC-RAS\DRAKE\12808\drake12908.g02
                       Flow Title : City of Henderson Master Plan - Exist2
Flow File : f:\504-424\prainage\CLOMR\HEC-RAS\prakE\12808\drake12908.f03
   Plan Summary Information:
Number of: Cross Sections = 327
Culverts = 1
Bridges = 0 Lateral Structures =
        sputational Information
Water surface calculation tolerance = 0.003
Critical depth calculation tolerance = 0.003
Maximum number of iterations = 20
Maximum difference tolerance = 0.1
Flow tolerance factor = 0.001
  Computation options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method:
Average Conveyance
Computational Flow Regime: Subcritical Flow
  Flow Title: City of Henderson Master Plan - Exist2
Flow File : f:\S04-424\Drainage\CLOMR\HEC-RAS\DRAKE\12808\drake12908.f03

    warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. warning: purpose the control of the calculated water surface came the assumed particulated water surface came the second control of the calculated water surface came the came the calculated water surface came the came the calculated water surface came the came that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than or, for greater than 1.4. This may indicate the downstream conveyance) is less than warning; for greater than 1.4. This may indicate the downstream conveyance) is less than warning; for greater than 1.4. This may indicate the second of the downstream conveyance is less than warning; During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

       warning: The energy equation could not be balanced within the specified number of iterations. The program used critical death for the water surface and continued on with the calculations. Warnings The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warnings The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warnings During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back beginning to the standard step iterations, when the assumed water surface may be supported by the calculated water surface came back beginning to the standard step iterations, when the assumed water surface the standard step iterations, when the assumed water surface the standard step iterations, when the same standard step iterations, when the assumed water surface the standard step iterations, when the same standard step iterations are standard step iterations.

  warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface came back below critical was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

           Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.6 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back down critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

  Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. warning: During the standard step iterations, when the assumed water surface was set egual to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

  warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

               Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standards step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer, the program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections. warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

               warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back bow critical or This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

      warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard separe surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

   warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back low critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.6 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections warning: During the standard step iterations, when the assumed that the less was set equal to critical depth, the calculated water surface came back greater and previous that there is not a valid subcritical answer. The program defaulted to critical depth.

The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross warning: During the standard stee he need for additional cross sections.

Warning: During the standard stee iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

```
drake12908.rep

drake12908.rep

0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross
section. This may indicate the need for additional cross sections.

Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

        warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the motter surface and continued on with the calculations. warning:

warning: O, or oreater than 1.4. This may indicate the need for additional cross sections.

warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

warning: During the standard step iterations, when back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

                 warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

              warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below of tical arise indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

  warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations, warning, rober atto (upstream conveyance divided by dommstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. warning: During the standard step iterations, when the assumed water surface was set egual to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: Ourning the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
