for the water surface and continued on with the calculations.

warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

warning: During the standard see iterations; sections, warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Was a section of the water surface was set equal to critical depth. River: Drake Channel Reach: C-1 to 0000 ft is a section of the water surface and continued on with the calculations.

Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate water surface came back below critical depth. This indicates that there is not a valid subcritical appth, was represented to the surface came back below critical depth. This indicates that there is not a valid subcritical appth. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate warning: The energy loss was greater than 1.0 ft (0.3 m). Detween the current and previous cross section. This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). Detween the current and previous cross section. This may indicate warnings the energy loss was greater than 1.0 ft (0.3 m). Detween the current and previous cross section. This may indicate warnings the energy loss was greater than 1.0 ft (0.3 m). Detween the current and previous cross section. This may indicate warnings the energy loss was greater than 1.0 ft (0.3 m). Detween the current and previous cross section. This may indicate warnings the read of the proper was a se

PROJECT DATA
Project Title: C-1 FIS Restudy-Drake Channel 12908
Project File: drake12908.prj
Run Date and Time: 1/29/2008 9:40:38 AM
 Project in English units
Project Description:
Drake Channel from confluence of C-1 to system headworks, 9000 ft east.
 PLAN DATA
Plan Title: Plan 05 Plan File : f:\$04-424\Drainage\CLOMR\HEC-RAS\DRAKE\12808\drake12908.p05
   Geometry Title: Drake Channel Geometrics revised C
Geometry File ; f:\S04-424\Drainage\CLOMR\HEC-RAS\DRAKE\12808\drake12908.g02
   Flow Title : City of Henderson Master Plan - Exist2
Flow File : f:\504-424\Drainage\CLOMR\HEC-RAS\DRAKE\12808\drake12908.f03
Plan Summary Information:
Number of: Cross Sections = 327 Multiple openings = 0
Culverts = 1 Inline Structures = 0
Bridges = 0 Lateral Structures = 0
Computational Information
Water surface calculation tolerance co.003
Critical depth calculation tolerance co.003
Maximum mumber of iterations co.1
How tolerance factor co.1
Flow tolerance factor co.1
Computation options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Nixed Flow
 **************************************

   Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

    warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

warning: During the standard step percaffec came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

   Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the current continues are equal to critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

   warning: The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate he need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Note: Program found supercritical flow starting at this cross section.

       warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

  Warming: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warming: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross section.

Note: Program found super-ritical flow starting at this cross section.

  Narring: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The Conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standards step iterations, when the assumed water surface came back above containing the standards step iterations, when the assumed water suggests that there is not a valid subcritical answer. The program defaulted to critical depth.

 warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

         warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. warning: buring the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

         warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: buring the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back low critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

    Warning: The energy equation could not be balanced within the specified number of iterations. The programs used critical depth for the water surface and continued on with the calculations. Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed upstream was set equal to critical depth, the Calculated water surface came the assumed upstream depth of the calculated water surface came the support of the calculated subcritical answer. The program defaulted to critical depth.

              warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross section.

Note: Program found supercritical flow starting at this cross section.

          warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: Ouring the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back how critical warning to the calculated water surface came back how critical value of the calculated water surface came back how critical depth.

The program selected the water surface that had the least amount of error between computed and warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance actio (upstream conveyance divided by downstream conveyance) is less than 0.5 or greater than 1.4. This may indicate the need for additional cross sections.

               Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross section.

Note: Program found supercritical Thow starting at this cross section.

        warning: The energy equation could not be balanced within the specified number of iterations. The programs selected the water surface that had the least amount of error between computed and assumed values. Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections. The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the mater surface and continued on with the calculations, warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections.

Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warning: Warnin

 Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations. Warning: The energy loss was greater than 1.0 ft (0.3 m), between the current and previous cross section. This may indicate the need for additional cross sections. Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
