CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Susan Brager
Chairman, Clark County
Board of Commissioners
500 South Grand Central Parkway
Las Vegas, NV 89155

IN REPLY REFER TO:

Case No.:	12-09-1708P
Follows Conditional Case No.:	07-09-0935R
Community Name:	Clark County, NV
Community No.:	320003
Effective Date of This Revision:	**January 18, 2013**

Dear Ms. Brager:

The Flood Insurance Rate Map for your community has been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Oakland, California, at (510) 627-7175, or the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

Sincerely,

Siamak Esfandiary, Ph.D., P.E., Program Specialist

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainage structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.

COMMUNITY REMINDERS

We based this determination on the base (1-percent-annual-chance) flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7175

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel(s) and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

PUBLIC NOTIFICATION OF REVISION

PUBLIC NOTIFICATION

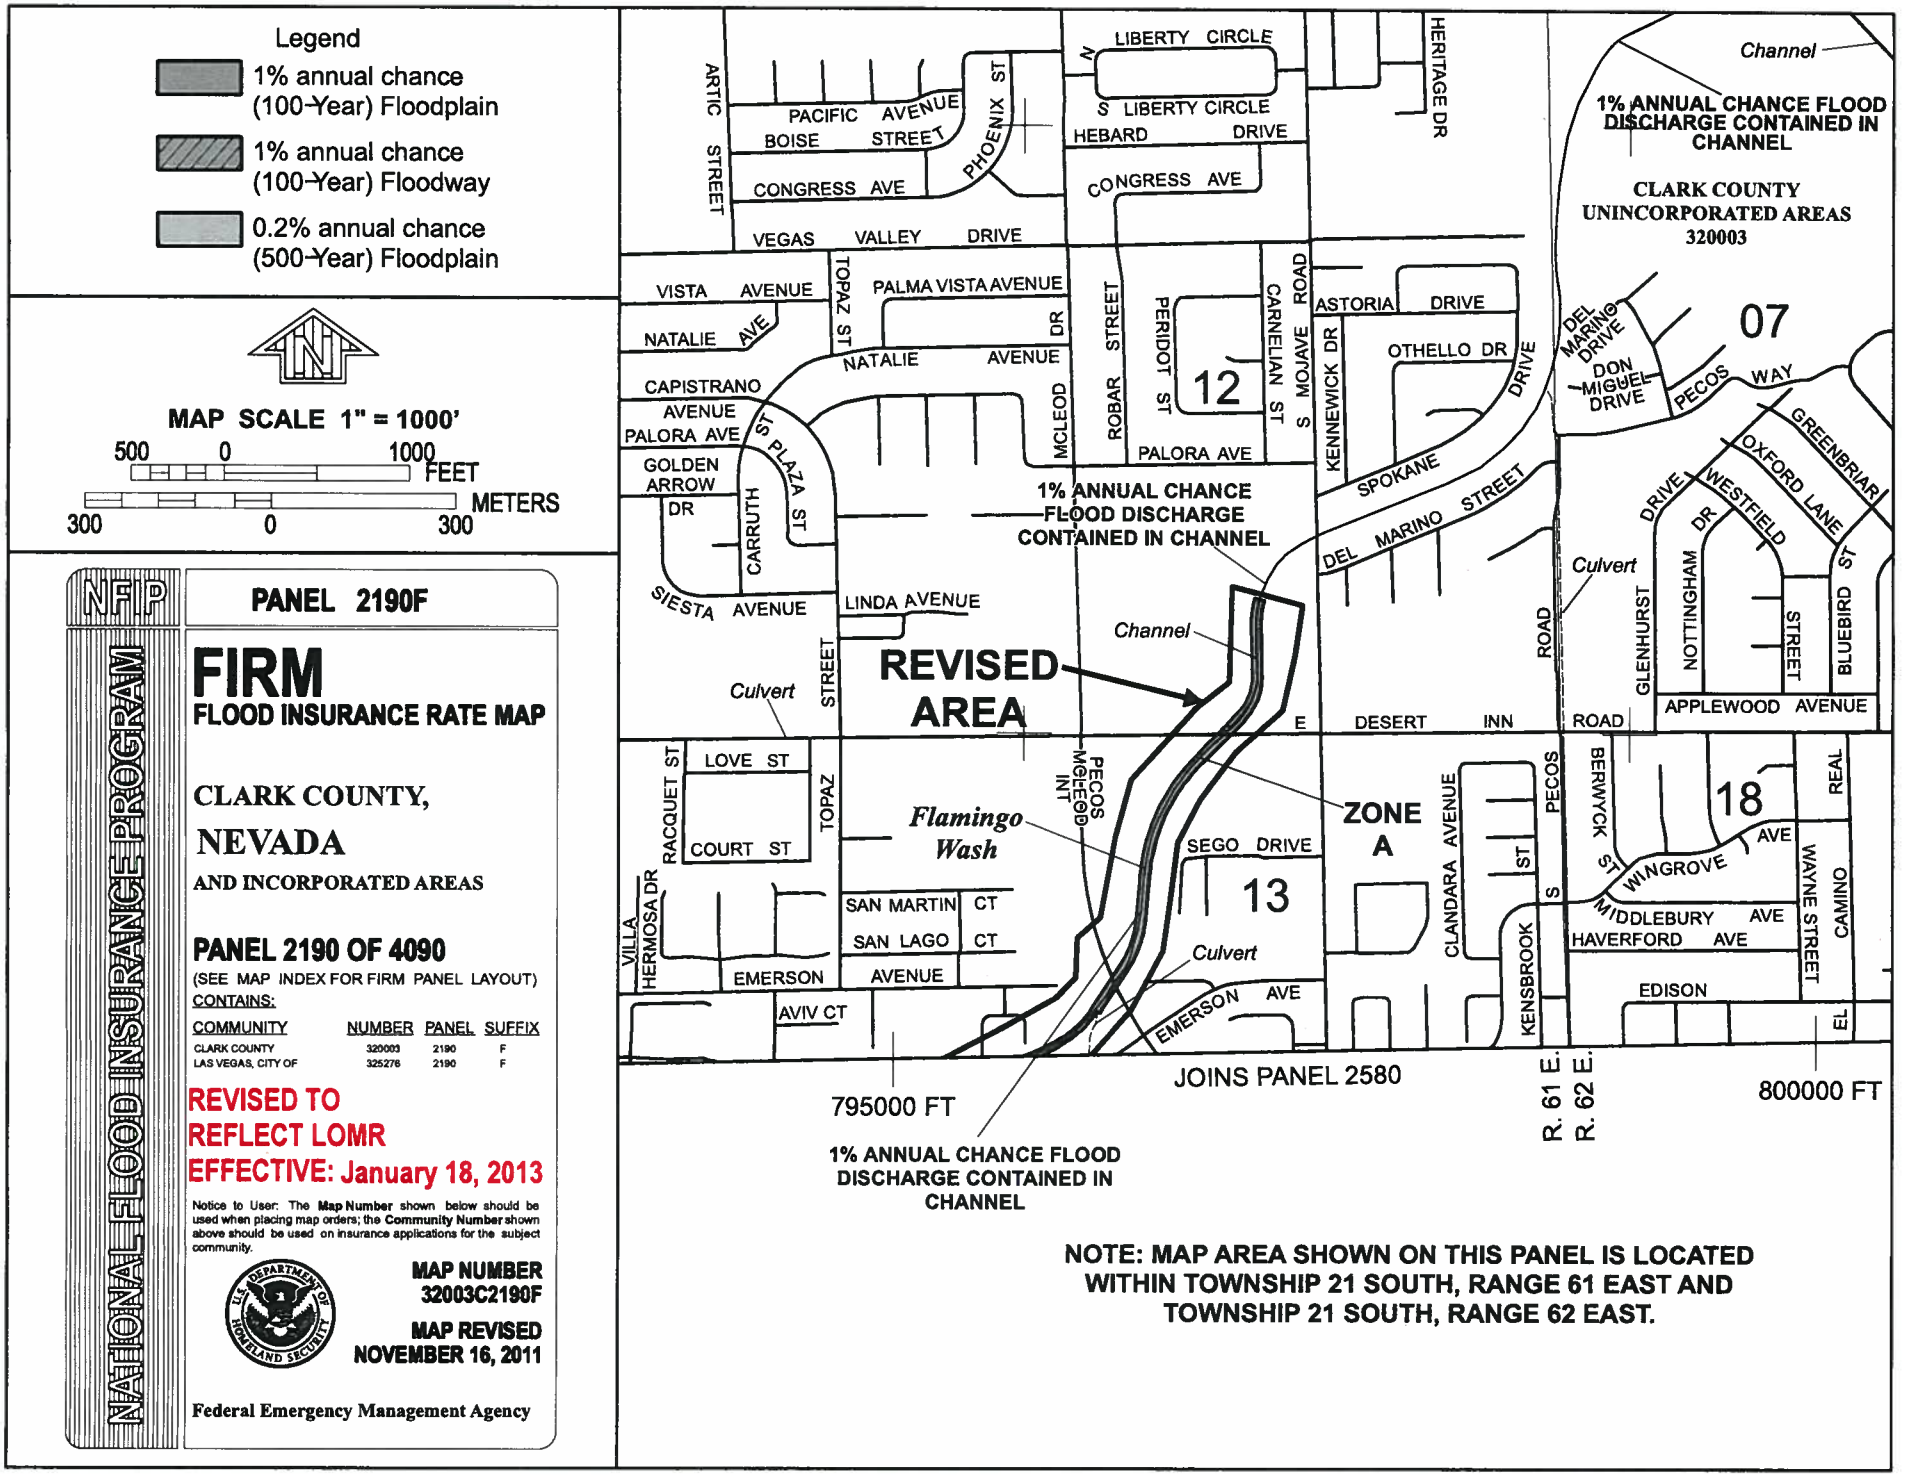

A notice of changes will be published in the *Federal Register*. This information also will be published in your local newspaper on or about the dates listed below and through FEMA's Flood Hazard Mapping website at https://www.floodmaps.fema.gov/fhm/Scripts/bfe_main.asp.

LOCAL NEWSPAPER Name: *The Las Vegas Review Journal*
Dates: September 13, 2012 and September 20, 2012

Within 90 days of the second publication in the local newspaper, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised flood hazard determination information presented in this LOMR may be changed.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

RE: Letter of Map Revision (LOMR) Case No. 12-08-1708P
Additional Data Requirement

Dear Ms. Weidmann:

This letter is in response to your request for additional information related to the Flamingo Wash Desert Inn Road to Spencer Street Request for Letter of Map Revision. The additional data requested in your letter are listed below followed by our response.

1. **The base floodplain top widths shown in the existing conditions HEC-RAS hydraulic analysis at Cross Sections 8320, 7000, 6736, 6577, 6469, and 6100 do not match the approximate base floodplain top widths shown on the topographic work map entitled, "Flamingo Wash Spencer Street to Desert Inn Road Hydraulic Workmap," prepared by the Louis Berger Group, Inc., dated April 2, 2012. Please provide an explanation for these discrepancies.**

   Based on our phone conversation, it appears that you may have an incorrect version of the work map. Please find attached the work map and GIS coverage for your use. Note that we have fine-tuned the floodplain delineation on the attached work map slightly in response to item 3 below. The top widths are consistent with the HEC-RAS model except for Section 8320 where we tie-in with the effective floodplain boundary.

2. **Several cross sections found in the submitted HEC-RAS hydraulic model along Flamingo Wash, including Cross Sections 5449.11, 5399.11, 5399.11, 5349.11, 5299.11, 5206.7, 5158.24, 5109.79, 5061.33, 4863.36, 4781.68, 4600, 4500, 3543.55, 33593.55, 3443.55, 3295.98, 3198.41, 3050.84, 3000.84, 2702.87, 2555.18, 2514.22, 2473.26, are not shown on the above-referenced topographic work maps. Please revise the above-referenced work maps to include all modeled cross sections, or explain why this is not necessary.**

   All of the HEC-RAS sections have been added to the work map to facilitate your review.

3. **From our technical review, it appears as though the base floodplain delineation is not mapped correctly between multiple cross sections. Please provide an explanation for these discrepancies, or make the appropriate revisions.**

   We have fine-tuned the floodplain delineation through the golf course to exactly match the base flood elevations with the contours at each section (see attached Workmap).

4. **Please submit documentation of the notification to property owners who will be affected by any widening/shifting of the base (1-percent-annual-chance) floodplain along Flamingo Wash.**

   A notification letter has been sent to the owner of the golf course property, APN 162-14-501-002 (see attached).

Thank you for your prompt review of this request for a Letter of Map Revision. If you have any additional questions, please do not hesitate to contact me.

Sincerely,

RE: Increase in Flood Plain Area

This letter is being sent to inform you that the Clark County Regional Flood Control District, on behalf of Clark County, has submitted a flood map revision request to the Federal Emergency Management Agency (FEMA) to change the floodplain within the Flamingo Wash from Desert Inn Road to Spencer Street.

You have been identified as the owner of the property referenced above which is expected to be affected by an increase in flood plain area as a result of this map revision request. The changes result from an analysis of the flood plain based on new topographic information for the Paradise Palms golf course. As a result of this study, an overall reduction in the flood plain area will occur with some minor increases within the golf course terrain when compared with the currently published FEMA Flood Insurance Rate Maps. A map is attached showing the effective flood zone in gray shading and the proposed flood zone in a yellow line.

If you should have any questions please contact me at 455-3139.

Sincerely,

Kevin Eubanks, P.E.
Assistant General Manager

1.0 INTRODUCTION

1.1 Purpose of Study

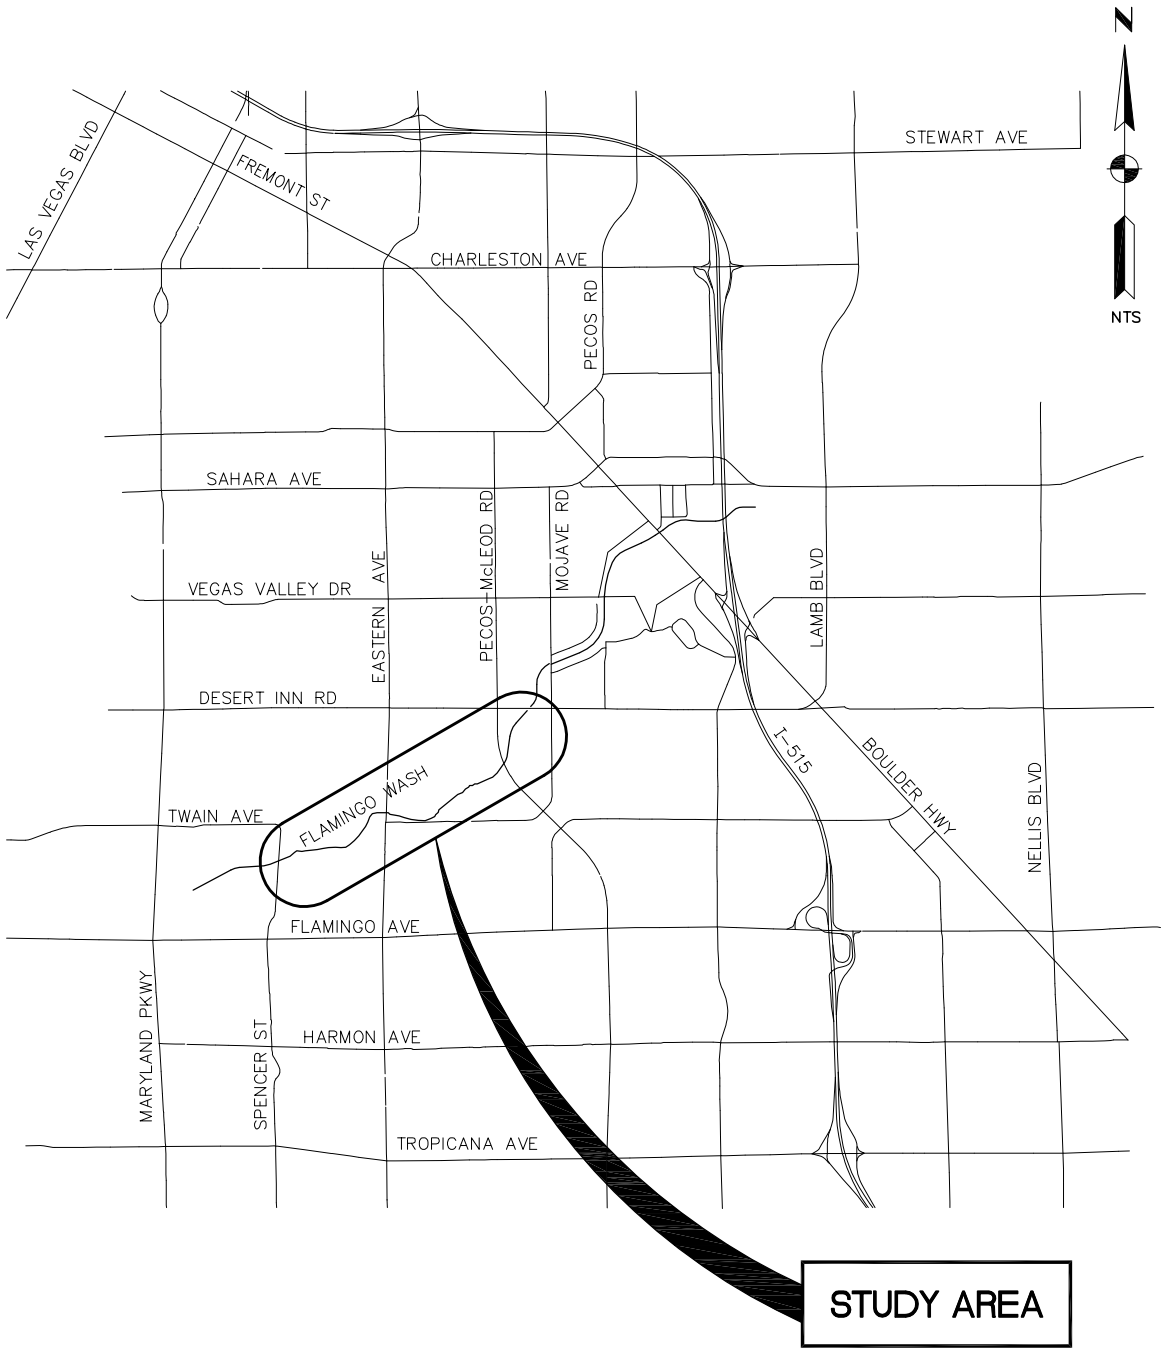

This submittal package provides hydraulic data in support of a Request for a Letter of Map Revision (LOMR) for the Flamingo Wash between Spencer Street and Desert Inn Road in Clark County, Nevada (see Figure 1). This LOMR request was prepared by The Louis Berger Group, Inc. (LBG) on behalf of Clark County Public Works (County) in cooperation with the Clark County Regional Flood Control District (CCRFCD).

This LOMR is a follow up to a Conditional Letter of Map Revision (CLOMR) for the project which was issued by FEMA on August 13, 2007 (Case No: 07-09-0935R) based on the Request for CLOMR for Flamingo Wash – Spencer Street to Desert Inn Road (LBG, 2007). A copy of the CLOMR issued by FEMA is provided in Appendix A.

Subsequent to receiving the CLOMR, the design was revised to eliminate all proposed channel improvements upstream of Eastern Avenue, including the new RCB under Eastern Avenue. The only differences between the 2007 CLOMR and this LOMR request are:

- FEMA MT-2 Form 3 has been updated (2/2011 version) and re-signed;
- The Proposed HECRAS Model has been revised to eliminate improvements upstream of Eastern Avenue; and,
- As-built plans and certification are included.

For completeness, all exhibits, information and data which were previously submitted in the CLOMR request (i.e., effective and corrected effective hydraulic models) are also included in this LOMR report.

FIGURE 1

1.2 Project Description

The study area, extending from Spencer Street to Desert Inn Road, encompasses approximately 1.5 miles of the Flamingo Wash in unincorporated Clark County, Nevada, Sections 13 and 14, Township 21 South, Range 61 East. The wash between Spencer Street and Desert Inn Road is designated as Special Flood Hazard Area (SFHA) Zone A on Flood Insurance Rate Map (FIRM) Panels 2190, 2557 and 2580 for Clark County Nevada and Incorporated Areas (see Figures 2a through 2d). SFHA Zone A is defined as an area subject to flooding by the 1% - annual chance flood with no base flood elevations determined.

The basis of this LOMR request is the Flamingo Wash Spencer Street to Desert Inn Road improvement project which was designed by LBG for the County. Copies of the as-built plans and a certification letter are provided in Appendix D. Figure 3 is an annotated FIRM showing the proposed Zone A floodplain.

The Flamingo Wash channel project includes construction of a concrete-lined, rectangular channel between Eastern Avenue and Desert Inn Road. The purpose of this LOMR is to: 1) revise the FIRM to reflect the proposed channel improvements between Eastern Avenue to Desert Inn Road; and 2) revise the floodplain boundaries for the Flamingo Wash through the golf course between Spencer Street and Eastern Avenue based on new topographic information which was acquired at the time of the channel design.

2.0 PREVIOUS STUDIES AND LOMRS

The limits of this LOMR study are depicted on the effective FIRM (Figure 2a). With the exception of the Golf Course area between Spencer Street and Eastern Avenue, the floodplain boundaries on Figure 2a were originally modeled and delineated in the Flood Insurance Study Restudy for the Flamingo Wash in Clark County, Nevada (FIS, 1997), prepared by G.C. Wallace Inc., for the CCRFCD. The source of the floodplain mapping for the Golf Course area is not known.

Subsequent to the preparation of the FIS (1997), two LOMRs (Case No. 04-09-0166P and Case No. 04-09-0167P) were issued in 2004 that revised the floodplain boundaries upstream of Spencer Street and downstream of Desert Inn Road. The FIRM maps were updated in November 2011 to reflect the two LOMRs (see Figures 2b through 2d). Brief discussions of the FIS (1997) and 2004 LOMRs, as they relate to this LOMR, are provided in the following sections.

2.1 Flamingo Wash Flood Insurance Study Restudy

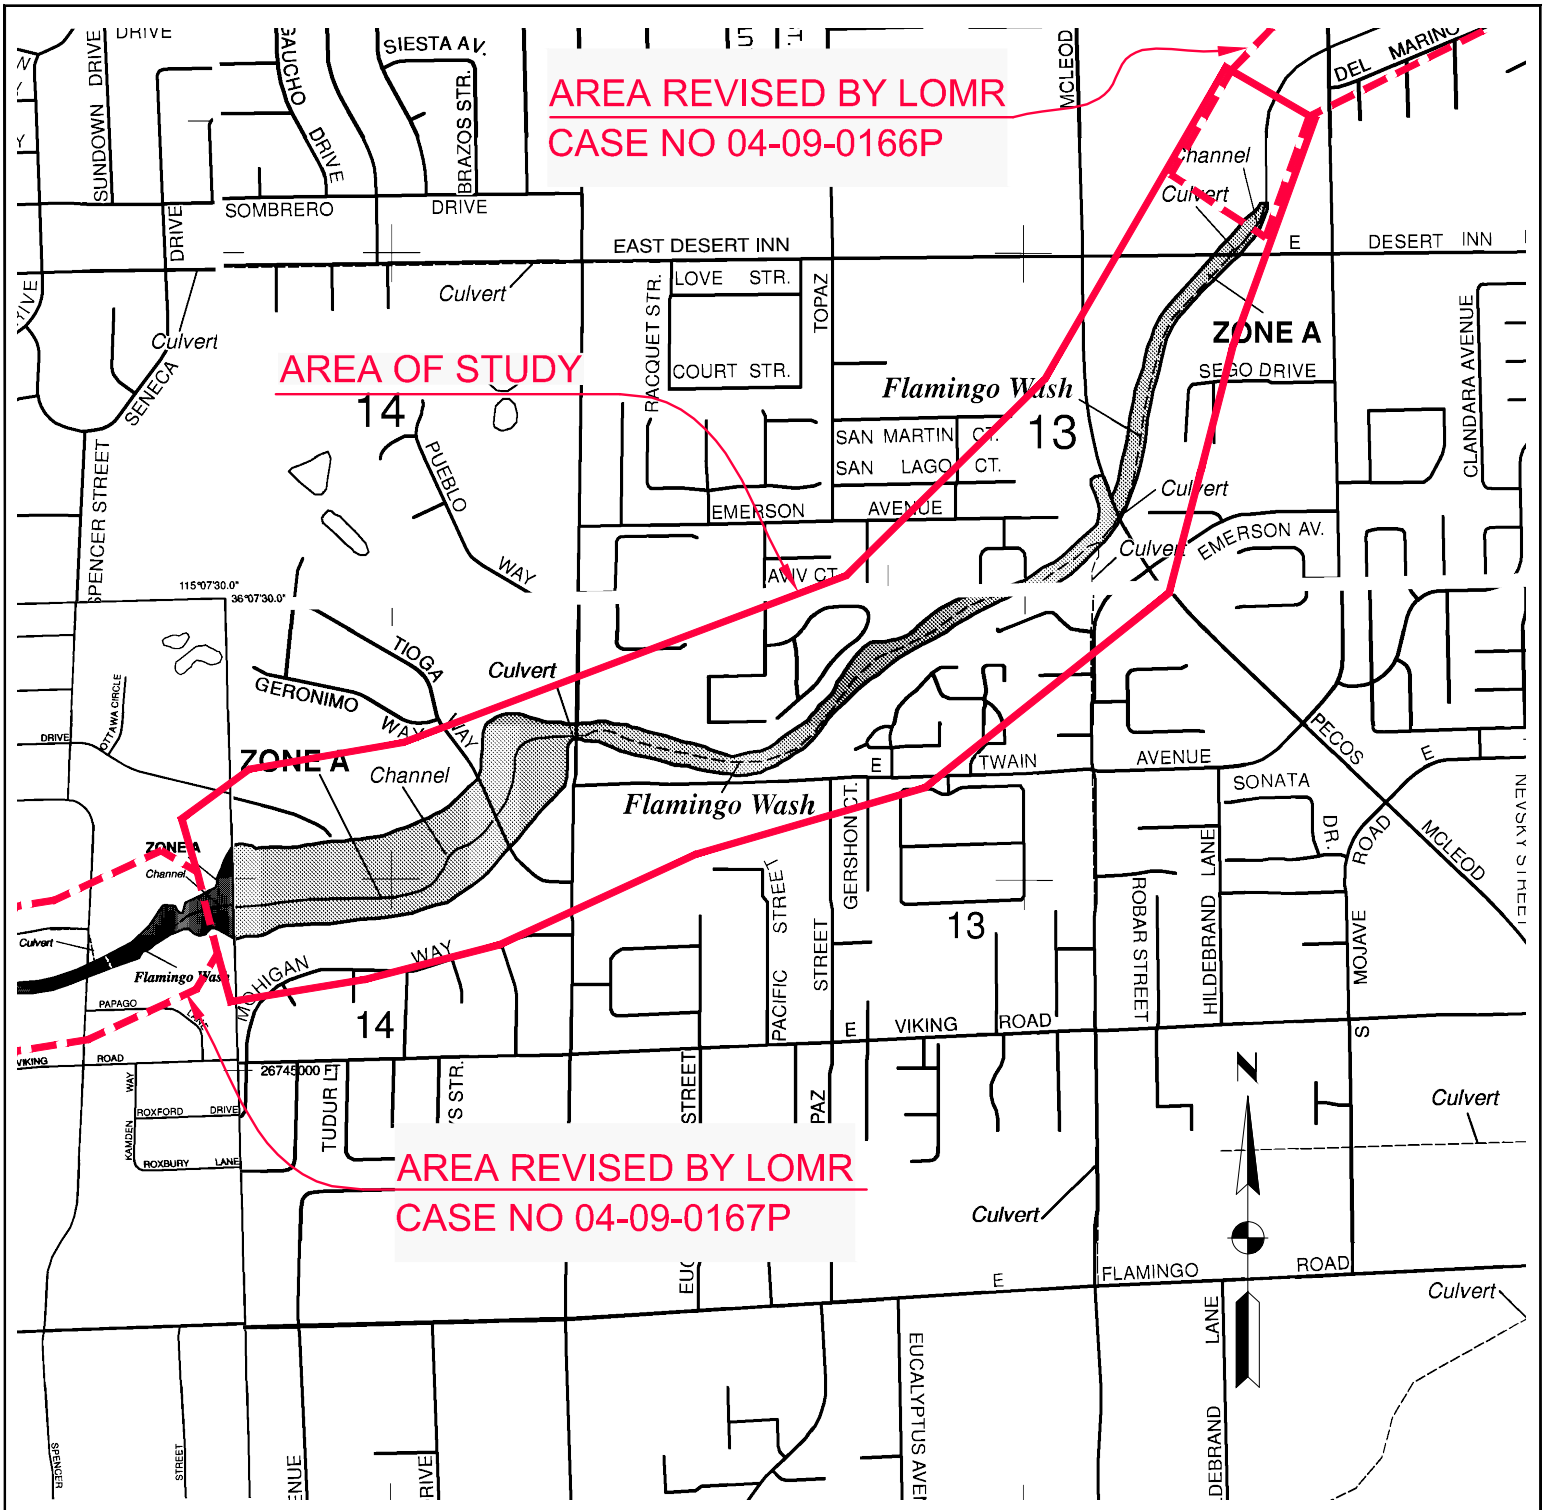

The FIS (1997) provides the "effective" 100-year flood hydrologic and hydraulic analyses for the Flamingo Wash watershed. Relevant excerpts from the FIS, including summary tables, a Workmap, and the HEC-2 hydraulic model, are provided Appendix B.1 and on the enclosed CD ROM in Appendix E for reference.

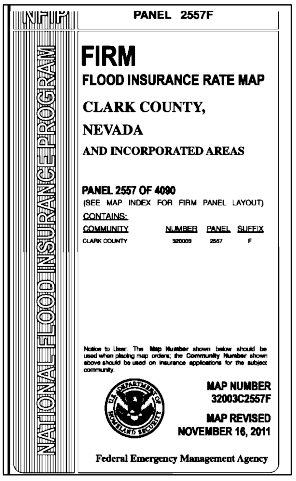

The 100-year flow rate developed by the FIS Restudy at Eastern Avenue is 5,500 cfs. The flow rate increases to 5,800 cfs approximately 450 ft upstream of Desert Inn Road. These flow rates were used in the Proposed HECRAS Model for this LOMR request.

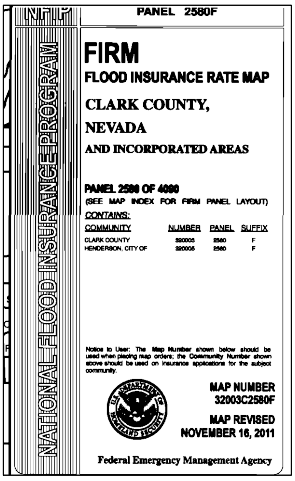

The FIS (1997) includes HEC-2 hydraulic analyses for several reaches of the Flamingo Wash. The reach that applies to this LOMR extends from Eastern Avenue to Las Vegas Wash. This is considered the "effective" model between Eastern Avenue and Desert Inn Road.

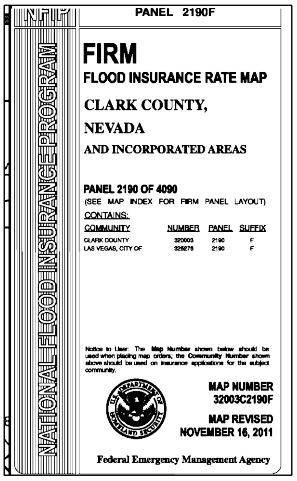

It should be noted that the elevations in the FIS HEC-2 hydraulic model are based on the National Geodetic Vertical Datum of 1929 (NGVD29). All hydraulic modeling in this LOMR is based on the North American Vertical Datum of 1988 (NAVD88). To correct for the differences in datum, the FIS NGVD29 elevations must be adjusted upward by a factor of 2.26 ft. A "corrected" FIS HEC-2 model was prepared previously as part of LOMR Case No. 04-09-0166P which is included in Appendix B.1.3.

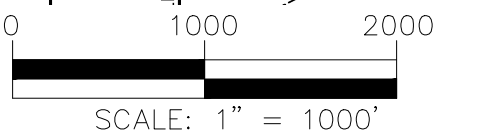

The "corrected" FIS HEC-2 model was not used in this study. It is provided for information purposes only because it is effective model for the wash between Eastern Avenue and Desert Inn Road. The Proposed HECRAS Model in this LOMR request ties into HECRAS models prepared for LOMRs upstream of Eastern Avenue and downstream of Desert Inn Road.

2.2 Flamingo Wash at Spencer LOMR

The Flamingo Wash at Spencer Street LOMR was issued by FEMA on March 12, 2004 (Case No. 04-09-0167P) in response to the Request for LOMR Flamingo Wash at Spencer Street prepared by the Louis Berger Group, Inc. for the CCRFCD (LBG, 2003a). A copy of the LOMR is provided in Appendix B.2.1.

The LOMR revised the floodplain boundary for the Flamingo Wash from Maryland Parkway to Spencer Street. A HECRAS model was prepared in support of the LOMR request. This is considered the "effective" hydraulic model for the Flamingo Wash between Maryland Parkway and Spencer Street. The Proposed HECRAS Model prepared for this LOMR request ties into the Flamingo Wash at Spencer LOMR model downstream of Spencer Street (cross-section 10 on Figure 4). Relevant excerpts from the Flamingo Wash at Spencer Street LOMR are provided in Appendix B.2 and Appendix E (CD ROM) including the workmap and HECRAS output.

2.3 Flamingo Wash Mojave Road to Boulder Highway LOMR

This LOMR was issued by FEMA on March 12, 2004 (Case No. 04-09-0166P) in response to the Request for LOMR Flamingo Wash Mojave Road to Boulder Highway prepared by the Louis Berger Group, Inc. for the CCRFCD (LBG, 2003b). A copy of the LOMR is provided in Appendix B.3.1.

The Flamingo Wash Mojave Road to Boulder Highway LOMR revised the floodplain downstream of Desert Inn Road. A HECRAS model was prepared in support of the LOMR request. This is considered the "effective" hydraulic model for the Flamingo Wash between Desert Inn Road and Boulder Highway. The HECRAS model prepared for this LOMR ties into the effective model downstream of Desert Inn Road (cross-section 620 on Figure 4). Relevant excerpts from the

Flamingo Wash Mojave Road to Boulder Highway LOMR are provided in Appendix B.3 and Appendix E (CD ROM) including the workmap and HECRAS output.

3.0 HYDRAULIC MODELS

3.1 Effective Hydraulic Models

There are three hydraulic models that represent the "effective" hydraulic data for the study reach:

1) The Flamingo Wash FIS Restudy HEC-2 model from Eastern Avenue to Las Vegas Wash (FIS, 1997);
2) The Flamingo Wash at Spencer Street LOMR Post-Project Conditions HECRAS model (LBG, 2003a); and,
3) The Flamingo Wash Mojave Road to Boulder Highway LOMR Post-Project Conditions HECRAS model (LBG, 2003b).

Model 1 was a subcritical HEC-2 run that addressed the Flamingo Wash between Eastern Avenue and Las Vegas Wash. The portions of Model 1 between Eastern Avenue and Desert Inn Road will be superseded by the Proposed HECRAS supercritical model in this study. Portions of Model 1 upstream of Eastern Avenue and downstream of Desert Inn Road have been previously revised by Models 2 and 3.

Models 2 and 3 were prepared for concrete channels which convey flow in the supercritical regime. The Proposed HECRAS model prepared for this LOMR ties into Model 2 at the upstream end and Model 3 at the downstream end as discussed in the following section.

3.2 Proposed HECRAS Models

Figure 4 is a hydraulic workmap showing the effective and proposed Flood Zone A, and HECRAS cross-sections used in the Proposed HECRAS modeling. Topographic data on the workmap was developed from aerial photogrammetry flown in August 2003. The contour interval of the original mapping is 1 foot and 40:1 scale. Cross-section information in the golf course was developed from the 1 foot contour data. Cross-section information for the improved channel sections are representative of the Flamingo Wash improvement plans in Appendix D.

Two HECRAS models for the 100-year flood were prepared for the Proposed conditions analysis: 1) subcritical; and, 2) supercritical. The models are provided in Appendix C.1 and C.2, respectively, and on the enclosed CD ROM in Appendix D.

The subcritical model was prepared for the purpose of delineating the floodplain through the earthen channel within golf course from Spencer Street to Eastern Avenue. Through the golf course, the Flamingo Wash consists of a gravel bed channel with sparse cattails and trees (see Figure 5). Flood flows exceed the banks of the gravel bed channel and inundate the grass fairways of the golf course. Manning's n values of 0.03 and 0.04 were used for the grass fairways and channel, respectively.

FIGURE 4

Figure 5. Flamingo Wash through the Golf Course

Flood flows through the golf course are conveyed in the subcritical flow regime. The subcritical Proposed HECRAS Model ties in at cross-section 10 of the Flamingo Wash at Spencer Street LOMR (Post Project) model (see Figure 4). Cross-section 10 in the Flamingo Wash at Spenser Street LOMR corresponds to cross-section 83+20 in the Proposed HECRAS Model for this LOMR request.

Tioga Way crosses the Flamingo Wash within the Golf Course. At Tioga Way, there are three existing 90-inch corrugated metal arch pipes (CMAP) under Tioga Way (see Figure 6). The Proposed HECRAS Model results indicate that the CMAPs have capacity to convey approximately 2,975 cfs. Flow in excess of 2,975 cfs overtops the road.

Figure 6. Three 90-inch CMAP under Tioga Way

At Eastern Avenue, there are five 10' x 8' reinforced concrete box (RCB) culverts at the Flamingo Wash. The Proposed HECRAS Model results indicate that the Eastern Avenue RCB culverts have capacity to convey approximately 4,730 cfs. Flow in excess of the RCB capacity, 770 cfs, would overtop the roadway in a 100-year flood at a depth of approximately 1.3 feet (maximum depth at the low point in the road). The flow would be spread out approximately 375 wide across the existing dip in the roadway profile (see Weir Section on Figure 4).

It is possible that a portion of the flow in Eastern Avenue could break out and travel east within Twain Avenue. The flow that could potentially break out at Twain Avenue was estimated to be 220 cfs based on the area of conveyance across the weir section (see Appendix C.3). The 220 cfs would be conveyed at a hydraulic depth of less than 1 foot (see calculations in Appendix C.3) and, therefore, was not delineated on the Hydraulic Workmap as a flood hazard area. If flow travels east in Twain Avenue, it would re-enter the wash downstream as depicted on the Hydraulic Workmap (Figure 4).

The 220 cfs was subtracted at HECRAS Section 57+96 and added back in at Section 51+09.79 to reflect the potential for the break out at Twain Avenue

Figure 7. Five 10' x 8' RCB at Eastern Avenue (looking downstream)

A supercritical Proposed HECRAS Model was prepared for the proposed Flamingo Wash concrete channel improvements between Eastern Avenue and Desert Inn Road (see Figures 8 and 9). The results of the model demonstrate that the 100-year flood will be contained within the channel downstream of Eastern Avenue. The supercritical Proposed HECRAS Model ties into cross-section 620 of the Flamingo Wash Mojave Road to Boulder Highway LOMR (Post-Project) model (see Figure 4). Cross-section 620 in the Flamingo Wash at Spenser Street LOMR corresponds to cross-section 2+23.47 in the Proposed HECRAS Model for this LOMR request.

Figure 8. Flamingo Wash Channel downstream of Eastern Avenue

It should be noted that the effective HEC-2 model (FIS, 1997) indicates that the the entire 100-year flood of 5,500 cfs is conveyed through five 10' x 8' RCBs at Eastern Avenue (i.e., flow does not overtop the road). This model utilized the special bridge option in HEC-2. The subcritical Proposed HECRAS Model in this LOMR request used the culvert routine to model the five RCBs at Eastern Avenue. The Proposed HECRAS Model indicates that the RCBs operate under inlet control, which creates an upstream backwater, and the water would overtop the road during a 100-year event. The results of the Proposed HECRAS Model were substantiated on July 8, 1999 when a flood approximating the 100-year event occurred and flow overtopped both Tioga Way and Eastern Avenue.

Figure 9. Flamingo Wash Channel downstream of Pecos- McLeod Bridge

It should also be noted that the Flamingo Wash channel improvements were designed to convey a "future" flow of 6,300 cfs from Spencer Street to the Van Buskirk confluence and 6,640 cfs from the Van Buskirk confluence to Desert Inn Road. The future flow is anticipated to be greater than the existing "effective" flow rate (5,500 cfs and 5,800 cfs). The hydraulic grade line (HGL) on the enclosed as-built improvement plans is based on the future conditions flow rates. The concrete channel wall height was established by adding approximately 4 feet to the future HGL to account for freeboard and super-elevation of the water surface.

4.0 CONCLUSION

This report presents the technical data in support of a LOMR for the Flamingo Wash between Spencer Street to Desert Inn Road. These data included new hydraulic models to account for better topography through the golf course and proposed channel improvements and workmaps showing the revised floodplain boundaries. The results of the 100-year flood hydraulic models indicate the following:

- The 100-year flow of 5,500 cfs will be contained within the golf course without affecting any buildings or structures.

- The existing 90" CMAP culverts at Tioga Way have capacity to convey approximately 2,975 cfs. Flow in excess of 2,425 cfs (5,500 cfs minus 2,975 cfs) will overtops the road and re-enter the wash on the downstream side.

- The existing five 10' x 8' RCBs at Eastern Avenue have capacity to convey approximately 4,730 cfs. The remaining 770 cfs (5,500 cfs minus 4,730 cfs) will overtop Eastern Avenue. While the majority of the overtopping flow will be contained within the dip in Eastern Avenue profile at the wash, it is possible for up to 220 cfs to breakout and travel east within Twain Avenue. The 220 cfs would be contained in the Twain Avenue street section and re-enter the wash approximately 600 feet downstream of Eastern Avenue.

- Downstream of Eastern Avenue, the 100-year flood (5,500 cfs to 5,800 cfs) will be contained within the proposed Flamingo Wash channel improvements.

OVERVIEW & CONCURRENCE FORM

O.M.B. NO. 1660-0016
Expires February 28, 2014

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington, VA 20958-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

A. REQUESTED RESPONSE FROM DHS-FEMA

This request is for a: (check one)

☐ CLOMR: A letter from DHS-FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision, or proposed hydrology changes (See 44 CFR Ch. 1, Parts 60, 65 & 72).

☒ LOMR: A letter from DHS-FEMA officially revising the current NFIP map to show the changes to floodplains, regulatory floodway, or flood elevations. (See 44 CFR Ch. 1, Parts 60, 65 & 72).

B. OVERVIEW

1. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	State	Map No.	Panel No.	Effective Date
Ex: 480301 480287	City of Katy Harris County	TX TX	48473C 48201C	0005D 0220G	02/08/83 09/28/90
320003	Clark County Nevada and Incorporated Areas	NV	32003C	2190F	11/16/11
320003	Clark County Nevada and Incorporated Areas	NV	32003C	2557F 2580F	11/16/11 11/16/11

2. a Flooding Source: Flamingo Wash

b. Types of Flooding: ☒ Riverine ☐ Coastal ☐ Shallow Flooding (e.g., Zones AO and AH) ☐ Alluvial fan ☐ Lakes ☐ Other (Attach Description)

3. Project Name/Identifier: Flamingo Wash Improvements Spencer Street to Desert Inn

4. FEMA Zone designations affected: A (Choices A, AH, AO, A1-A30, A99, AE, AR, V, V1-V30, VE, B, C, D, X)

5. Basis for Request and Type of Revision:

a. The basis for this revision request is (check all that apply)

☒ Physical Change	☐ Improved Methodology/Data	☐ Regulatory Floodway Revision	☐ Base Map Changes
☐ Coastal Analysis	☐ Hydraulic Analysis	☐ Hydrologic Analysis	☐ Corrections
☐ Weir-Dam Changes	☐ Levee Certification	☐ Alluvial Fan Analysis	☐ Natural Changes
☐ New Topographic Data	☐ Other (attach Description)		

Note: A photograph and narrative description of the area of concern is not required, but is very helpful during review.

b. The area of revision encompasses the following structures (check all that apply)

Structures:	☒ Channelization	☐ Levee/Floodwall	☐ Bridge/Culvert
	☐ Dam	☐ Fill	☐ Other (Attach Description)

6. ☐ Documentation of ESA compliance is submitted (required to initiate CLOMR review). Please refer to the instructions for more information

C. REVIEW FEE

Has the review fee for the appropriate request category been included? ☒ Yes, Fee Amount: $5,000

☐ No, Attach Explanation

Please see the DHS-FEMA website at http://fema.gov/plan/prevent/fhm/frm_fees.shtm for Fee Amounts and Exemptions.

D. SIGNATURE

All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States code, Section 1001.

Name: Syndi J. Flippin-Dudley. Ph. D., P.E.	Company: The Louis Berger Group, Inc.	
Mailing Address: 500 E. Amigo Court Suite 100 Las Vegas, NV 89119	Daytime Telephone No.: (702) 736-6632	FAX No.: (702) 736-0704
	EMAIL ADDRESS: sdudley@louisberger.com	
Signature of Requester (Required)		Date

As the community official responsible for floodplain management, I hereby acknowledge that we have received and reviewed this Letter of of Map Revision (LOMR) or conditional LOMR request. Based upon the community's review, we find the completed or proposed project meets or is designed to meet all of the community floodplain management requirements, including the requirement for when fill is placed in the regulatory floodway, and that all necessary Federal, State, and local permits have been, or in the case of a conditional LOMR, will be obtained. For conditional LOMR request, the applicant has documented Endangered Species Act (ESA) compliance to DHS/FEMA prior to DHS/FEMA's review of the Conditional LOMR application. For LOMR request, I acknowledge that compliance with sections 9 and 10 of the ESA has been achieved independently of DHS/FEMA's process. For actions authorized, funded, or being carried out by Federal or State agencies, documentation from the agency showing its compliance with Section 7(a)(2) of the ESA will be submitted. In addition, we have determined that the land and any existing or proposed structures to be removed from the SFHA are or will be reasonably safe from flooding as defined in 44 CFR 65.2(c), and that we have available upon request by DHS/FEMA, all analyses and documentation used to make this determination.

Community Official's Name and Title: Layne Weber, P.E., C.F.M., Principal Engineer	Community Name: Clark County Unincorporated Areas	
Mailing Address: 500 South Grand Central Parkway 2nd Floor Las Vegas, NV 89155	Daytime Telephone No.: (702) 455-6000	FAX No.: (702) 455-4808
	EMAIL ADDRESS: lweber@ccpw.gov	
Community Official's signature (required)		Date

CERTIFICATION BY REGISTRATION PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR

This certification is to be signed and sealed by a licensed land surveyor, registered professional engineer, or architect authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.2(b) and as described in the MT-2 Forms instruction. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name	License No.	Expiration Date
Syndi J. Flippin-Dudley, Ph. D., P.E.	11070	06/30/2013
Company Name	**Telephone No.**	**Fax No.**

RIVERINE HYDROLOGY & HYDRAULICS FORM

O.M.B No. 1660-0016
Expires February 28, 2014

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington VA 20958-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a NFIP Flood Insurance Rate Maps (FIRM).

Flooding Source: Flamingo Wash

Note: Fill out one form for each flooding source studied

A. HYDROLOGY

1. Reason for New Hydrologic Analysis (check all that apply)

☒ Not revised (skip to section B) ☐ No existing analysis ☐ Improved data
☐ Alternative methodology ☐ Proposed Conditions (CLOMR) ☐ Changed physical condition of watershed

2. Comparison of Representative 1%-Annual-Chance Discharges

Location	Drainage Area (Sq. Mi.)	Effective/FIS (cfs)	Revised (cfs)

3. Methodology for New Hydrologic Analysis (check all that apply)

☐ Statistical Analysis of Gage Records ☐ Precipitation/Runoff Model → Specify Model: _____
☐ Regional Regression Equations ☐ Other (please attach description)

Please enclose all relevant models in digital format, maps, computations (including computation of parameters), and documentation to support the new analysis.

4. Review/Approval of Analysis

If your community requires a regional, state, or federal agency to review the hydrologic analysis, please attach evidence of approval/review.

5. Impacts of Sediment Transport on Hydrology

Is the hydrology for the revised flooding source(s) affected by sediment transport? ☐ Yes ☐ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation..

B. HYDRAULICS

1. Reach to be Revised

	Description	Cross Section	Water-Surface Elevations (ft.)	
			Effective	Proposed/Revised
Downstream Limit*	DS of Desert Inn Road	2+23.47	1854.04	1853.97
Upstream Limit*	DS of Spencer Street	83+20	1932.43	1932.43

*Proposed/Revised elevations must tie-into the Effective elevations within 0.5 foot at the downstream and upstream limits of revision.

2. Hydraulic Method/Model Used: HEC-RAS

3. Pre-Submittal Review of Hydraulic Models*

DHS-FEMA has developed two review programs, CHECK-2 and CHECK-RAS, to aid in the review of HEC-2 and HEC-RAS hydraulic models, respectively. We recommend that you review your HEC-2 and HEC-RAS models with CHECK-2 and CHECK-RAS.

4.

Models Submitted	Natural Run		Floodway Run		Datum
Duplicate Effective Model*	File Name:	Plan Name:	File Name:	Plan Name:	
Corrected Effective Model*	File Name: See Attached CD	Plan Name:	File Name:	Plan Name:	
Existing or Pre-Project Conditions Model	File Name:	Plan Name:	File Name:	Plan Name:	
Revised or Post-Project Conditions Model	File Name: See Attached CD	Plan Name:	File Name:	Plan Name:	
Other - (attach description)	File Name:	Plan Name:	File Name:	Plan Name:	

* For details, refer to the corresponding section of the instructions.

☐ Digital Models Submitted? (Required)

C. MAPPING REQUIREMENTS

A **certified topographic work map** must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions); location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

☐ Digital Mapping (GIS/CADD) Data Submitted (preferred)

Topographic Information: _____

Source: _____ Date: _____

Accuracy: _____

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach **a copy of the effective FIRM and/or FBFM**, at the same scale as the original, annotated to show the boundaries of the revised 1%-and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%-and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area on revision.

☐ Annotated FIRM and/or FBFM (Required)

D. COMMON REGULATORY REQUIREMENTS*

1. For LOMR/CLOMR requests, do Base Flood Elevations (BFEs) increase? ☐ Yes ☒ No

   a. For CLOMR requests, if either of the following is true, please submit **evidence of compliance with Section 65.12 of the NFIP regulations**:

      - The proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot compared to pre-project conditions.
      - The proposed project encroaches upon a SFHA with or without BFEs established and would result in increases above 1.00 foot compared to pre-project conditions.

   b. Does this LOMR request cause increase in the BFE and/or SFHA compared with the effective BFEs and/or SFHA? ☐ Yes ☒ No
      If Yes, please attach **proof of property owner notification and acceptance (if available)**. Elements of and examples of property owner notifications can be found in the MT-2 Form 2 Instructions.

2. Does the request involve the placement or proposed placement of fill? ☒ Yes ☐ No

   If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, to include any structures or proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from flooding in accordance with the NFIP regulations set forth at 44 CFR 60.3(A)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for more information.

3. For LOMR requests, is the regulatory floodway being revised? ☐ Yes ☒ No

   If Yes, attach **evidence of regulatory floodway revision notification**. As per Paragraph 65.7(b)(1) of the NFIP Regulations, notification is required for requests involving revisions to the regulatory floodway. (Not required for revisions to approximate 1%-annual-chance floodplains [studied Zone A designation] unless a regulatory floodway is being established. Elements and examples of regulatory floodway revision notification can be found in the MT-2 Form 2 Instructions.)

4. For CLOMR requests, please submit documentation to FEMA and the community to show that you have complied with Sections 9 and 10 of the Endangered Species Act (ESA).

For actions authorized, funded, or being carried out by Federal or State agencies, please submit documentation from the agency showing its compliance with Section 7(a)(2) of the ESA. Please see the MT-2 instructions for more detail.

* Not inclusive of all applicable regulatory requirements. For details, see 44 CFR parts 60 and 65.

RIVERINE STRUCTURES FORM

O.M.B. NO. 1660-0016
Expires February 28, 2014

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 7 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington, VA 20598-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program; Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a NFIP Flood Insurance Rate Maps (FIRM).

Flooding Source: Flamingo Wash

Note**:** Fill out one form for each flooding source studied.

A. GENERAL

Complete the appropriate section(s) for each Structure listed below:

Channelization.....complete Section B
Bridge/Culvert.....complete Section C
Dam.....complete Section D
Levee/Floodwall.....complete Section E
Sediment Transport.....complete Section F (if required)

Description Of Modeled Structure

1. Name of Structure: Flamingo Wash Channel from Desert Inn to Spencer

   Type (check one): ☒ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: Flamingo Wash from Desert Inn to Spencer Street

   Downstream Limit/Cross Section: 10+88.94

   Upstream Limit/Cross Section: 57+96

2. Name of Structure: _____

   Type (check one): ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: _____

   Downstream Limit/Cross Section: _____

   Upstream Limit/Cross Section: _____

3. Name of Structure: _____

   Type (check one) ☐ Channelization ☐ Bridge/Culvert ☐ Levee/Floodwall ☐ Dam

   Location of Structure: _____

   Downstream Limit/Cross Section: _____

   Upstream Limit/Cross Section: _____

NOTE: FOR MORE STRUCTURES, ATTACH ADDITIONAL PAGES AS NEEDED.

B. CHANNELIZATION

Flooding Source: Flamingo Wash

Name of Structure: Flamingo Wash Channel from Desert Inn to Spencer Street

1. Hydraulic Considerations

The channel was designed to carry 6,300+ (cfs) and/or the 100-year flood.
The design elevation in the channel is based on (check one):

☐ Subcritical flow ☐ Critical flow ☒ Supercritical flow ☐ Energy grade line

If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.

☐ Inlet to channel ☐ Outlet of channel ☐ At Drop Structures ☐ At Transitions

☐ Other locations (specify): _____

2. Channel Design Plans

Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.

3. Accessory Structures

The channelization includes (check one):

☐ Levees [Attach Section E (Levee/Floodwall)] ☐ Drop structures ☐ Superelevated sections

☒ Transitions in cross sectional geometry ☐ Debris basin/detention basin [Attach Section D (Dam/Basin)] ☐ Energy dissipator

☐ Weir ☐ Other (Describe):

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? ☐ Yes ☒ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

C. BRIDGE/CULVERT

Flooding Source: _____

Name of Structure: _____

1. This revision reflects (check one):

☐ Bridge/culvert not modeled in the FIS

☐ Modified bridge/culvert previously modeled in the FIS

☐ Revised analysis of bridge/culvert previously modeled in the FIS

2. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8): _____
If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.

3. Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):

☐ Dimensions (height, width, span, radius, length)
☐ Shape (culverts only)
☐ Material
☐ Beveling or Rounding
☐ Wing Wall Angle
☐ Skew Angle
☐ Distances Between Cross Sections
☐ Erosion Protection
☐ Low Chord Elevations – Upstream and Downstream
☐ Top of Road Elevations – Upstream and Downstream
☐ Structure Invert Elevations – Upstream and Downstream
☐ Stream Invert Elevations – Upstream and Downstream
☐ Cross-Section Locations

4. Sediment Transport Considerations

Are the hydraulics of the structure affected by sediment transport? ☐ Yes ☐ No

If Yes, then fill out Section F (Sediment Transport) of Form 3. If no, then attach an explanation.

D. DAM/BASIN

Flooding Source: _____
Name of Structure: _____

1. This request is for (check one): ☐ Existing dam/basin ☐ New dam/basin ☐ Modification of existing dam/basin

2. The dam/basin was designed by (check one): ☐ Federal agency ☐ State agency ☐ Private organization ☐ Local government agency

   Name of the agency or organization: _____

3. The Dam was permitted as (check one): ☐ Federal Dam ☐ State Dam

   Provide the permit or identification number (ID) for the dam and the appropriate permitting agency or organization

   Permit or ID number _____ Permitting Agency or Organization _____

   a. ☐ Local Government Dam ☐ Private Dam

   Provided related drawings, specification and supporting design information.

4. Does the project involve revised hydrology? ☐ Yes ☐ No

   If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2).

   Was the dam/basin designed using critical duration storm? (must account for the maximum volume of runoff)

   ☐ Yes, provide supporting documentation with your completed Form 2.

   ☐ No, provide a written explanation and justification for not using the critical duration storm.

5. Does the submittal include debris/sediment yield analysis? ☐ Yes ☐ No

   If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why debris/sediment analysis was not considered?

6. Does the Base Flood Elevation behind the dam/basin or downstream of the dam/basin change? ☐ Yes ☐ No

   If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2) and complete the table below.

FREQUENCY (% annual chance)	Stillwater Elevation Behind the Dam/Basin FIS	REVISED
10-year (10%)	_____	_____
50-year (2%)	_____	_____
100-year (1%)	_____	_____
500-year (0.2%)	_____	_____
Normal Pool Elevation	_____	_____

7. Please attach a copy of the formal Operation and Maintenance Plan

E. LEVEE/FLOODWALL

1. System Elements

a. This Levee/Floodwall analysis is based on (check one): ☐ upgrading of an existing levee/floodwall system ☐ a newly constructed levee/floodwall system ☐ reanalysis of an existing levee/floodwall system

b. Levee elements and locations are (check one):

☐ earthen embankment, dike, berm, etc. Station _____ to _____
☐ structural floodwall Station _____ to _____
☐ Other (describe): Station _____ to _____

c. Structural Type (check one): ☐ monolithic cast-in place reinforced concrete ☐ reinforced concrete masonry block ☐ sheet piling ☐ Other (describe): _____

d. Has this levee/floodwall system been certified by a Federal agency to provide protection from the base flood?

☐ Yes ☐ No

If Yes, by which agency? _____

e. Attach certified drawings containing the following information (indicate drawing sheet numbers):

1. Plan of the levee embankment and floodwall structures. Sheet Numbers: _____
2. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers: _____
3. A profile of the BFE, closure opening outlet and inlet invert elevations, type and size of opening, and kind of closure. Sheet Numbers: _____
4. A layout detail for the embankment protection measures. Sheet Numbers: _____
5. Location, layout, and size and shape of the levee embankment features, foundation treatment, Floodwall structure, closure structures, and pump stations. Sheet Numbers: _____

2. Freeboard

a. The minimum freeboard provided above the BFE is:

Riverine

3.0 feet or more at the downstream end and throughout	☐ Yes	☐ No
3.5 feet or more at the upstream end	☐ Yes	☐ No
4.0 feet within 100 feet upstream of all structures and/or constrictions	☐ Yes	☐ No

Coastal

1.0 foot above the height of the one percent wave associated with the 1%-annual-chance stillwater surge elevation or maximum wave runup (whichever is greater).	☐ Yes	☐ No
2.0 feet above the 1%-annual-chance stillwater surge elevation	☐ Yes	☐ No

Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Paragraph 65.10(b)(1)(ii) of the NFIP Regulations.

If No is answered to any of the above, please attach an explanation.

b. Is there an indication from historical records that ice-jamming can affect the BFE? ☐ Yes ☐ No

If Yes, provide ice-jam analysis profile and evidence that the minimum freeboard discussed above still exists.

3. Closures

a. Openings through the levee system (check one): ☐ exists ☐ does not exist

If opening exists, list all closures:

Channel Station	Left or Right Bank	Opening Type	Highest Elevation for Opening Invert	Type of Closure Device

(Extend table on an added sheet as needed and reference)

Note: Geotechnical and geologic data

In addition to the required detailed analysis reports, data obtained during field and laboratory investigations and used in the design analysis for the following system features should be submitted in a tabulated summary form. (Reference U.S. Army Corps of Engineers [USACE] EM-1110-2-1906 Form 2086.)

4. Embankment Protection

a. The maximum levee slope land side is: _____

b. The maximum levee slope flood side is: _____

c. The range of velocities along the levee during the base flood is: _____ (min.) to _____ (max.)

d. Embankment material is protected by (describe what kind): _____

e. Riprap Design Parameters (check one): ☐ Velocity ☐ Tractive stress
Attach references

Reach	Sideslope	Flow Depth	Velocity	Curve or Straight	Stone Riprap			Depth of Toedown
					D_{100}	D_{50}	Thickness	
Sta to								
Sta to								
Sta to								
Sta to								
Sta to								
Sta to								

(Extend table on an added sheet as needed and reference each entry)

f. Is a bedding/filter analysis and design attached? ☐ Yes ☐ No

g. Describe the analysis used for other kinds of protection used (include copies of the design analysis):

Attach engineering analysis to support construction plans.

5. Embankment And Foundation Stability

a. Identify locations and describe the basis for selection of critical location for analysis:
_____

☐ Overall height: Sta.: _____, height _____ ft.

☐ Limiting foundation soil strength:

Strength ϕ = _____ degrees, c = _____ psf

Slope: SS = _____ (h) to _____ (v)

(Repeat as needed on an added sheet for additional locations)

b. Specify the embankment stability analysis methodology used (e.g., circular arc, sliding block, infinite slope, etc.):
_____

c. Summary of stability analysis results:

E. LEVEE/FLOODWALL (CONTINUED)

5. Embankment And Foundation Stability (continued)

Case	Loading Conditions	Critical Safety Factor	Criteria (Min.)
I	End of construction		1.3
II	Sudden drawdown		1.0
III	Critical flood stage		1.4
IV	Steady seepage at flood stage		1.4
VI	Earthquake (Case I)		1.0

(Reference: USACE EM-1110-2-1913 Table 6-1)

d. Was a seepage analysis for the embankment performed? ☐ Yes ☐ No

If Yes, describe methodology used:

e. Was a seepage analysis for the foundation performed? ☐ Yes ☐ No

f. Were uplift pressures at the embankment landside toe checked? ☐ Yes ☐ No

g. Were seepage exit gradients checked for piping potential? ☐ Yes ☐ No

h. The duration of the base flood hydrograph against the embankment is _____ hours.

Attach engineering analysis to support construction plans.

6. Floodwall And Foundation Stability

a. Describe analysis submittal based on Code (check one): ☐ UBC (1988) ☐ Other (specify): _____

b. Stability analysis submitted provides for: ☐ Overturning ☐ Sliding If not, explain: _____

c. Loading included in the analyses were: ☐ Lateral earth @ P_A = _____ psf; P_p = _____ psf

☐ Surcharge-Slope @ _____, ☐ surface _____ psf

☐ Wind @ P_w = _____ psf

☐ Seepage (Uplift); _____ ☐ Earthquake @ P_{eq} = _____ %g

☐ 1%-annual-chance significant wave height: _____ ft.

☐ 1%-annual-chance significant wave period: _____ sec.

d. Summary of Stability Analysis Results: Factors of Safety.
Itemize for each range in site layout dimension and loading condition limitation for each respective reach.

Loading Condition	Criteria (Min)		Sta	To	Sta	To
	Overturn	Sliding	Overturn	Sliding	Overturn	Sliding
Dead & Wind	1.5	1.5				
Dead & Soil	1.5	1.5				
Dead, Soil, Flood, & Impact	1.5	1.5				
Dead, Soil, & Seismic	1.3	1.3				

(Ref: FEMA 114 Sept 1986; USACE EM 1110-2-2502)
Note: (Extend table on an added sheet as needed and reference)

E. LEVEE/FLOODWALL (CONTINUED)

6. Floodwall And Foundation Stability (continued)

e. Foundation bearing strength for each soil type:

Bearing Pressure	Sustained Load (psf)	Short Term Load (psf)
Computed design maximum		
Maximum allowable		

f. Foundation scour protection ☐ is, ☐ is not provided. If provided, attach explanation and supporting documentation:

Attach engineering analysis to support construction plans.

7. Settlement

a. Has anticipated potential settlement been determined and incorporated into the specified construction elevations to maintain the established freeboard margin? ☐ Yes ☐ No

b. The computed range of settlement is _____ ft. to _____ ft.

c. Settlement of the levee crest is determined to be primarily from : ☐ Foundation consolidation ☐ Embankment compression ☐ Other (Describe): _____

d. Differential settlement of floodwalls ☐ has ☐ has not been accommodated in the structural design and construction.

Attach engineering analysis to support construction plans.

8. Interior Drainage

a. Specify size of each interior watershed:

Draining to pressure conduit: _____ acres
Draining to ponding area: _____ acres

b. Relationships Established

Ponding elevation vs. storage	☐ Yes	☐ No
Ponding elevation vs. gravity flow	☐ Yes	☐ No
Differential head vs. gravity flow	☐ Yes	☐ No

c. The river flow duration curve is enclosed: ☐ Yes ☐ No

d. Specify the discharge capacity of the head pressure conduit: _____ cfs

e. Which flooding conditions were analyzed?

• Gravity flow (Interior Watershed)	☐ Yes	☐ No
• Common storm (River Watershed)	☐ Yes	☐ No
• Historical ponding probability	☐ Yes	☐ No
• Coastal wave overtopping	☐ Yes	☐ No

If No for any of the above, attach explanation.

e. Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection. ☐ Yes ☐ No If No, attach explanation.

g. The rate of seepage through the levee system for the base flood is _____ cfs

h. The length of levee system used to drive this seepage rate in item g: _____ ft.

E. LEVEE/FLOODWALL (CONTINUED)

8. Interior Drainage (continued)

i. Will pumping plants be used for interior drainage? ☐ Yes ☐ No

If Yes, include the number of pumping plants: _____ For each pumping plant, list:

	Plant #1	Plant #2
The number of pumps		
The ponding storage capacity		
The maximum pumping rate		
The maximum pumping head		
The pumping starting elevation		
The pumping stopping elevation		
Is the discharge facility protected?		
Is there a flood warning plan?		
How much time is available between warning and flooding?		

Will the operation be automatic? ☐ Yes ☐ No

If the pumps are electric, are there backup power sources? ☐ Yes ☐ No

(Reference: USACE EM-1110-2-3101, 3102, 3103, 3104, and 3105)

Include a copy of supporting documentation of data and analysis. Provide a map showing the flooded area and maximum ponding elevations for all interior watersheds that result in flooding.

9. Other Design Criteria

a. The following items have been addressed as stated:

Liquefaction ☐ is ☐ is not a problem

Hydrocompaction ☐ is ☐ is not a problem

Heave differential movement due to soils of high shrink/swell ☐ is ☐ is not a problem

b. For each of these problems, state the basic facts and corrective action taken:

Attach supporting documentation

c. If the levee/floodwall is new or enlarged, will the structure adversely impact flood levels and/or flow velocities floodside of the structure?
☐ Yes ☐ No Attach supporting documentation

d. Sediment Transport Considerations:

Was sediment transport considered? ☐ Yes ☐ No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why sediment transport was not considered.

10. Operational Plan And Criteria

a. Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? ☐ Yes ☐ No

b. Does the operation plan incorporate all the provisions for closure devices as required in Paragraph 65.10(c)(1) of the NFIP regulations?
☐ Yes ☐ No

c. Does the operation plan incorporate all the provisions for interior drainage as required in Paragraph 65.10(c)(2) of the NFIP regulations?
☐ Yes ☐ No If the answer is No to any of the above, please attach supporting documentation.

E. LEVEE/FLOODWALL (CONTINUED)

11. Maintenance Plan

Please attach a copy of the fomal maintenance plan for the levee/floodwall

12. Operations and Maintenance Plan

Please attach a copy of the formal Operations and Maintenance Plan for the levee/floodwall.

CERTIFICATION OF THE LEVEE DOCUMENTION

This certification is to be signed and sealed by a licensed registered professional engineer authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.10(e) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: _____ License No.: _____ Expiration Date: _____

Company Name: _____ Telephone No.: _____ Fax No.: _____

Signature: _____ Date: _____ E-Mail Address: _____

F. SEDIMENT TRANSPORT

Flooding Source: _____

Name of Structure: _____

If there is any indication from historical records that sediment transport (including scour and deposition) can affect the Base Flood Elevation (BFE); and/or based on the stream morphology, vegetative cover, development of the watershed and bank conditions, there is a potential for debris and sediment transport (including scour and deposition) to affect the BFEs, then provide the following information along with the supporting documentation:

Sediment load associated with the base flood discharge: Volume _____ acre-feet

Debris load associated with the base flood discharge: Volume _____ acre-feet

Sediment transport rate _____ (percent concentration by volume)

Method used to estimate sediment transport: _____

Most sediment transport formulas are intended for a range of hydraulic conditions and sediment sizes; attach a detailed explanation for using the selected method.

Method used to estimate scour and/or deposition: _____

Method used to revise hydraulic or hydrologic analysis (model) to account for sediment transport: _____

Please note that bulked flows are used to evaluate the performance of a structure during the base flood; however, FEMA does not map BFEs based on bulked flows.

If a sediment analysis has not been performed, an explanation as to why sediment transport (including scour and deposition) will not affect the BFEs or structures must be provided.

STATEMENTS OF EXPLANATION

1. **MT-2 Form 3, Page 2 of 11**
   Item B.4 Channelization – Sediment Transport Considerations

   The concrete channel 100-year peak flow velocity is greater than 20 ft/s. It is anticipated that the channel will be self-cleaning due to high flow velocities.

RECEIVED
AUG 1 3 2007
The Louis Berger Group, Inc.
Las Vegas, Nevada

The Honorable Rory Reid
Chair, Board of Commissioners
Clark County
500 South Grand Central Parkway
Las Vegas, NV 89106

Dear Mr. Reid:

This responds to a request that the Department of Homeland Security's Federal Emergency Management Agency (FEMA) comment on the effects that a proposed project would have on the effective Flood Insurance Rate Map (FIRM) for Clark County, Nevada and Incorporated Areas, in accordance with Part 65 of the National Flood Insurance Program (NFIP) regulations. In a letter dated March 8, 2007, Mr. Kevin Eubanks, P.E., CFM, Assistant General Manager, Clark County Regional Flood Control District, requested that FEMA evaluate the effects along Flamingo Wash from just downstream of Desert Inn Road to just downstream of Spencer Street, that updated topographic information, a proposed culvert under Tioga Way, a proposed culvert under Eastern Avenue, and proposed channelization would have on the flood hazard information shown on the effective FIRM.

All data required to complete our review of this request for a Conditional Letter of Map Revision (CLOMR) were submitted with letters from Mr. Eubanks.

We reviewed the submitted data and the data used to prepare the effective FIRM for your community and determined that the proposed project meets the minimum floodplain management criteria of the NFIP. We believe that, if the proposed project is constructed as shown on the undated plans entitled "Improvements Plans for Flamingo Wash Spencer Street to Desert Inn Road" and as described in the report entitled "Request for Conditional Letter of Map Revision Flamingo Wash – Spencer Street to Desert Inn Road," dated January 11, 2007, both prepared by The Louis Berger Group, Inc., and the data listed below are received, a revision to the FIRM would be warranted.

As a result of updated topographic information, proposed channelization, and proposed culverts, the width of the Special Flood Hazard Area (SFHA), the area that would be inundated by the base (1-percent-annual-chance) flood, will increase in some areas and decrease in other areas throughout the proposed area of revision, compared to the effective SFHA width from just downstream of Desert Inn Road to just downstream of Spencer Street along Flamingo Wash. The maximum increase in SFHA width, approximately 100 feet, will occur approximately 700 feet upstream of Tioga Way. The maximum decrease in SFHA width, approximately 200 feet, will occur just upstream of McLeod Drive. The entire base flood will be contained in the proposed channel and culverts from just downstream of Desert Inn Road to just downstream of Eastern Avenue.

Upon completion of the project, your community may submit the data listed below and request that we make a final determination on revising the effective FIRM.

- Detailed application and certification forms must be used for requesting final revisions to the maps. Therefore, when the map revision request for the area covered by this letter is submitted, Form 1, entitled "Overview & Concurrence Form," must be included. (A copy of this form is enclosed.)

- The detailed application and certification forms listed below may be required if as-built conditions differ from the preliminary plans. If required, please submit new forms (copies of which are enclosed) or annotated copies of the previously submitted forms showing the revised information.

  Form 2, entitled "Riverine Hydrology & Hydraulics Form"

  Form 3, entitled "Riverine Structures Form"

  Hydraulic analyses for as-built conditions of the base flood and regulatory floodway, together with a topographic work map showing the revised floodplain and floodway boundaries, must be submitted with Form 2.

- Effective October 30, 2005, FEMA revised the fee schedule for reviewing and processing requests for conditional and final modifications to published flood information and maps. In accordance with this schedule, the current fee for this map revision request is $4,000 and must be received before we can begin processing the request. Please note, however, that the fee schedule is subject to change, and requesters are required to submit the fee in effect at the time of the submittal. Payment of this fee shall be made in the form of a check or money order, made payable in U.S. funds to the National Flood Insurance Program, or by credit card (Visa or MasterCard only). The payment, along with the revision application, must be forwarded to the following address:

  FEMA National Service Provider
  3601 Eisenhower Avenue
  Alexandria, VA 22304-6425

- As-built plans, certified by a registered professional engineer, of all proposed project elements

- Community acknowledgment of the map revision request

After receiving appropriate documentation to show that the project has been completed, FEMA will initiate a revision to the FIRM.

The basis of this CLOMR is, in whole or in part, a channel-modification/culvert project. NFIP regulations, as cited in Paragraph 60.3(b)(7), require that communities assure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management regulations. Consequently, the ultimate responsibility for maintenance of the modified channel and culvert rests with your community.

This CLOMR is based on minimum floodplain management criteria established under the NFIP. Your community is responsible for approving all floodplain development and for ensuring all necessary permits required by Federal or State law have been received. State, county, and community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction in the

SFHA. If the State, county, or community has adopted more restrictive or comprehensive floodplain management criteria, these criteria take precedence over the minimum NFIP criteria.

If you have any questions regarding floodplain management regulations for your community or the NFIP in general, please contact the Consultation Coordination Officer (CCO) for your community. Information on the CCO for your community may be obtained by calling the Director, Federal Insurance and Mitigation Division of FEMA in Oakland, California, at (510) 627-7175. If you have any questions regarding this CLOMR, please call our Map Assistance Center, toll free, at 1-877-FEMA MAP (1-877-336-2627).

Sincerely,

the Flamingo Wash. Approximately 2,700 cfs will flow into Boulder Highway. Boulder Highway is sagged in this location and will allow the overflow to spillover back into the Flamingo Wash to the east. Note the revised floodplain in this area is increased.

After discussions with the CCRFCD, it was decided to designate the Special Flood Hazard Area by approximate methods (Zone A) because of the extent of existing development and the narrow width of the floodplain along the majority of the entire study area.

APPROXIMATE METHOD
HEC-2 MODEL ANALYSIS
EASTERN AVE. TO LAS VEGAS WASH REACH

This reach from Eastern Avenue to Las Vegas Wash was flown as part of this project. Therefore, topography was generated. The starting water surface elevation was computed using normal depth. The subcritial run was used to determine the floodplain delineation for this reach.

A supplemental HEC-2 model analysis was performed to estimate the limits of flooding between Desert Inn Road and Mojave Road using a supercritical run. This reach is completely concrete lined as demonstrated by the photographs. The starting water surface elevation was computed using critical depth.

Federal Emergency Management Agency

Washington, D.C. 20472

MAR 12 2004

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Chip Maxfield, P.E.
Chair, Clark County Board
of Commissioners
500 South Grand Central Parkway
Las Vegas, NV 89155

IN REPLY REFER TO:
Case No.: 04-09-0167P
Community Name: Clark County, NV
Community No.: 320003
Effective Date of This Revision: MAR 12 2004

Dear Mr. Maxfield:

The Flood Insurance Rate Map for your community has been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panel(s) revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Federal Insurance and Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Oakland, California, at (510) 627-7103, or the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

Sincerely,

Max H. Yuan, P.E., Project Engineer
Hazard Identification Section
Mitigation Division
Emergency Preparedness
and Response Directorate

For: Doug Bellomo, P.E., CFM, Acting Chief

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the modified channel and bridge rests with your community. We may request that your community submit a description and schedule of channel and bridge activities.

COMMUNITY REMINDERS

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

COMMUNITY INFORMATION (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Federal Insurance and Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7103

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

PUBLIC NOTIFICATION OF REVISION

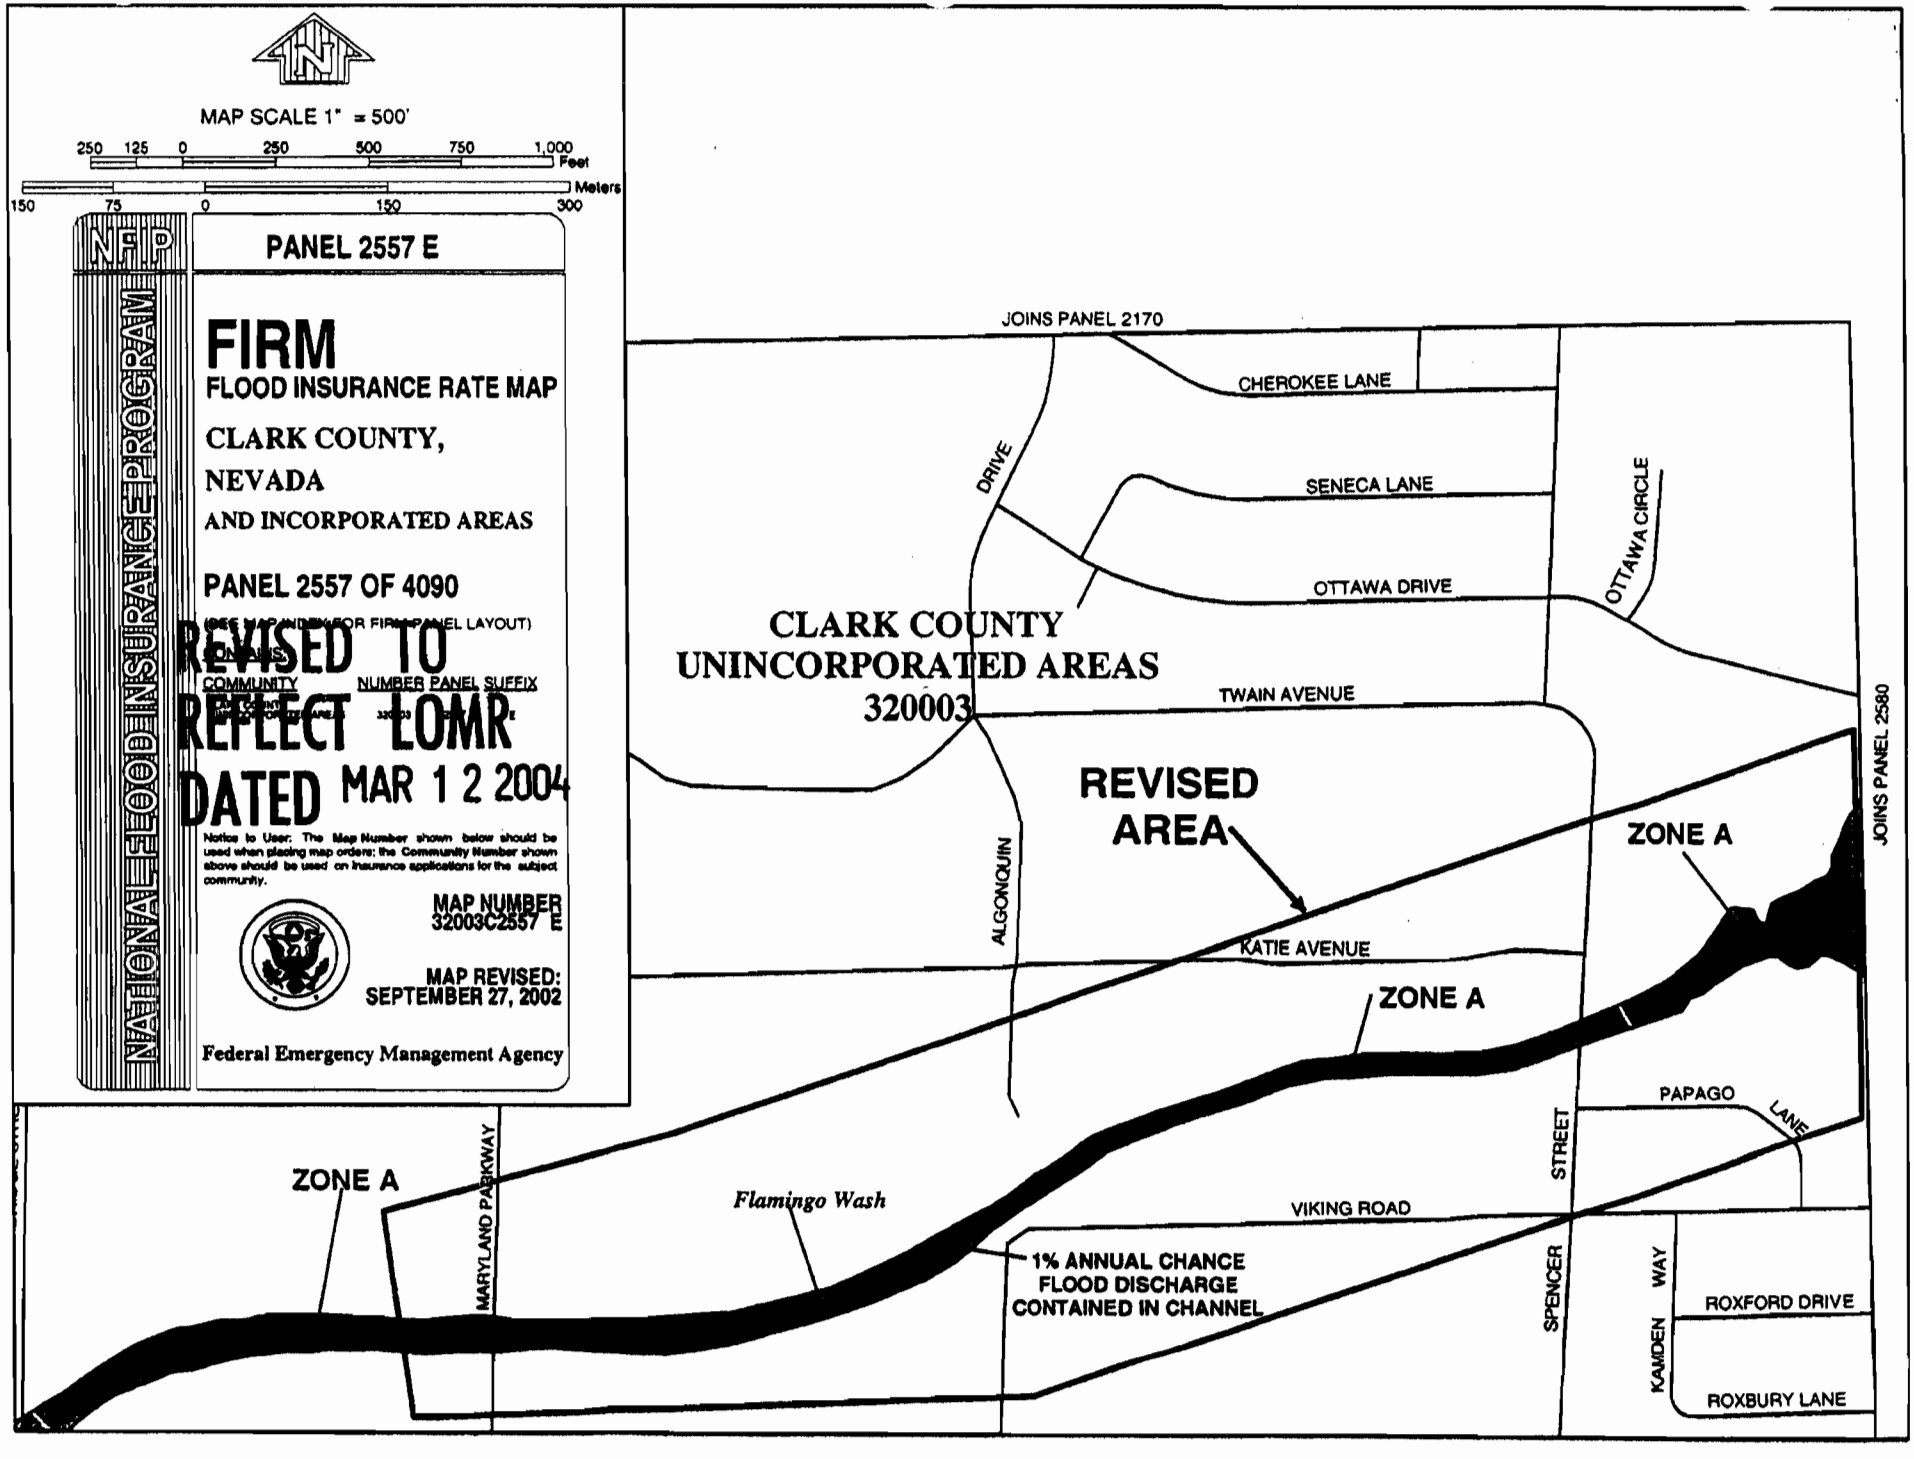

This revision is effective as of the date of this letter. Any requests to review or alter this determination should be made within 30 days and must be based on scientific or technical data.

As a result of the modifications, the Special Flood Hazard Area, the area that would be inundated by the base (1-percent-annual-chance) flood, along Flamingo Wash, from approximately 1,200 feet downstream to just upstream of Maryland Parkway, shifted approximately 30 feet to the north to better reflect existing topography. The base flood is contained in the channel in this reach.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for
         additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less
         than 0.7 or greater than 1.4.  This may indicate the need for additional cross sections.
Note:    Hydraulic jump has occurred between this cross section and the previous upstream section.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and assumed values.

Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and assumed values.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations.  The
         program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for
         additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross
         section.  This may indicate the need for additional cross sections.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Chip Maxfield, P.E.
Chair, Clark County Board
of Commissioners
500 South Grand Central Parkway
Las Vegas, NV 89155

IN REPLY REFER TO:
Case No.: 04-09-0166P
Community Name: Clark County, NV
Community No.: 320003
Effective Date of This Revision: MAR 12 2004

Dear Mr. Maxfield:

The Flood Insurance Rate Map for your community has been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panel(s) revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Federal Insurance and Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Oakland, California, at (510) 627-7103, or the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

Sincerely,

Max H. Yuan, P.E., Project Engineer
Hazard Identification Section

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the modified channel and bridge rests with your community. We may request that your community submit a description and schedule of channel and bridge activities.

COMMUNITY REMINDERS

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Federal Insurance and Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7103

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2677 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

PROJECT DATA
Project Title: Request for Letter of Map Revision
Project File : 879_P_Flamingo.prj
Run Date and Time: 8/29/2003 4:22:25 PM

Project in English units

Project Description:
REQUEST FOR LETTER OF MAP REVISION - FLAMINGO WASH
POST PROJECT CONDITIONS MODEL
DATUM - NAVD88
FILE: 879_P_FLAMINGO.PRJ
STARTING WSE = CRITICAL DEPTH
SUPERCRITICAL RUN
PHASE 1&2 OF THE FLAMINGO WASH IMPROVEMENTS FROM MOJAVE ROAD TO BOULDER HIGHWAY

PLAN DATA

Plan Title: Post Project Conditions
Plan File : E:\879-Flamingo\HEC-Ras\879_P_Flamingo.p02

Geometry Title: Flamingo Wash - Mojave Road to Boulder Highway
Geometry File : E:\879-Flamingo\HEC-Ras\879_P_Flamingo.g02

Flow Title : Flamingo Wash 100-year Storm
Flow File : E:\879-Flamingo\HEC-Ras\879_P_Flamingo.f02

Plan Summary Information:

Number of:	Cross Sections	= 30	Mulitple Openings	=	0
	Culverts	= 0	Inline Structures	=	0
	Bridges	= 2	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculaton tolerance = 0.01
Maximum number of interations = 20

```
    Maximum difference tolerance        =  0.3
    Flow tolerance factor               =  0.001

Computation Options
    Critical depth computed only where necessary
    Conveyance Calculation Method: At breaks in n values only
    Friction Slope Method:         Average Conveyance
    Computational Flow Regime:     Supercritical Flow

FLOW DATA

Flow Title: Flamingo Wash 100-year Storm

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The cross section had to be extended vertically during the critical depth calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

---Summary of Statistics---

	Minimum	Maximum
Left Overbank n Value:	0.02	0.03
Right Overbank n Value:	0.02	0.03

Channel n Value:	0.015	0.03
Contraction Coefficient:	0.1	0.3
Expansion Coefficient:	0.3	0.5

ROUGHNESS COEFFICIENT CHECK

RS: 640
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 640
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 640
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 630
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 630
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 630
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 620
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 620
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 620
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 610
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 610
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 610
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 600

NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 600
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 600
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 595
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 595
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 595
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 595
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 595
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 595
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 590
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 590
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 590
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

RS: 580
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 580
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a concrete lined channel.

```
RS:       570
NT RC 01 Right overbank n value is less than 0.035
         The n value for overbank is usually larger then 0.035.

NT RC 01 Right overbank n value is less than 0.035
         The n value for overbank is usually larger then 0.035.
         The n value should be reevaluated.

RS:       390
NT RC 03 Channel n value is equal to or less than 0.025
         The n value of the channel is usually larger than 0.025.
         The n value should be reevaluated it if is not representing a
         concrete lined channel.

TRANSITION LOSS COEFFICIENT CHECK
---------------------------------

RS:       610
NT TL 01 This is section 4
         Contraction and expansion loss coefficients are 0.1 and 0.3
         They should be equal to 0.3 and 0.5 respectively.

RS:       600
```

```
NT TL 01 This is section 3
         Contraction and expansion loss coefficients are 0.1 and 0.3
         They should be equal to 0.3 and 0.5 respectively.

RS:      595
NT TL 01 This is section Bridge-Up
         Contraction and expansion loss coefficients are 0.1 and 0.3
         They should be equal to 0.3 and 0.5 respectively.

RS:      445
NT TL 01 This is section 4
         Contraction and expansion loss coefficients are 0.1 and 0.3
         They should be equal to 0.3 and 0.5 respectively.

RS:      420
NT TL 02 Contraction and expansion loss coefficients are 0.3 and 0.5
         respectively. However, this cross section is not at the structure.
         They should be equal to 0.1 and 0.3.

RS:      415
NT TL 02 Contraction and expansion loss coefficients are 0.3 and 0.5
         respectively. However, this cross section is not at the structure.
         They should be equal to 0.1 and 0.3.

ROUGHNESS COEFFICIENT AT STRUCTURES
-----------------------------------

RS:      595
NT RS 02 The channel n value of 0.015 for the upstream internal bridge opening
         section is equal or larger than the channel n value of 0.015 at Section 3.
         Usually, the channel n value of the bridge opening section is
         less than the channel n value of Section 3.
         The selection of the n value(s) should be reevaluated.

RS:      595
NT RS 02 The channel n value of 0.015 for the downstream internal bridge opening
         section is equal or larger than the channel n value of 0.015 at Section 2
         Usually, the channel n value of the bridge opening section is
         less than the channel n value of Section 2.
         The selection of the n value(s) should be reevaluated.

RS:      435
NT RS 02 The channel n value of 0.015 for the upstream internal bridge opening
         section is equal or larger than the channel n value of 0.015 at Section 3.
         Usually, the channel n value of the bridge opening section is
         less than the channel n value of Section 3.
         The selection of the n value(s) should be reevaluated.

RS:      435
NT RS 02 The channel n value of 0.015 for the downstream internal bridge opening
         section is equal or larger than the channel n value of 0.015 at Section 2
         Usually, the channel n value of the bridge opening section is
         less than the channel n value of Section 2.
         The selection of the n value(s) should be reevaluated.

GEOMETRIC CHECK

RS: 435
ST GD 03 The starting station of 900 from upstream road/weir data
is less than the starting station of 1000 from upstream internal
section/ secion 3.
The high chord elevation of 1807.75 for the starting road/weir station is

greater than the ground elevation of 1806.3 for the starting ground station.
The EGEL at section 3 of 1808.12 is greater than the ground elevation.
The road/weir data should be included in the ground data

RS: 435
ST GD 03 The end station of 1113.05 from upstream road/weir data
is less than the end station of 1113.11 from upstream internal
section/section 3.
The high chord elevation of 1807.75 for the end road/weir station is
greater than the ground elevation of 1807.552 for the same ground station.
The road/weir profile may need to be extended.

RS: 435
ST GD 04 There is only one bridge. This is upstream bridge section.
However, the low chord line crosses the ground line at more than
two locations.
The ground and deck/roadway data should be checked.

C & E Loss (ft)	0.04	Cum SA (acres)	6.59	10.72	6.14

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

*************************************************************************************************

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
         water surface came back below critical depth.  This indicates that there is not a valid subcritical answer.  The program
         defaulted to critical depth.

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
       Momentum               Cd   =     1.2
Selected Low Flow Methods = Momentum

High Flow Method
       Pressure and Weir flow
           Submerged Inlet Cd          =
           Submerged Inlet + Outlet Cd =      .8
           Max Low Cord                =
```

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Note: The weir over a bridge is submerged, the energy answer was used.
Note: Momentum answer is not valid if the water surface is above the low chord or if there is weir flow. The momentum answer has been disregarded.
Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.
Note: Manning's n values were composited to a single value in the main channel.

*************************************************************************************************

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: Divided flow computed for this cross-section.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
          This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
         water surface came back below critical depth.  This indicates that there is not a valid subcritical answer.  The program
         defaulted to critical depth.

*************************************************************************************************

Note:    Momentum answer is not valid if the water surface is above the low chord or if there is weir flow.  The momentum
         answer has been disregarded.
Note:    The downstream water surface is above the minimum elevation required for orifice flow.  The orifice flow equation was
         used for pressure flow.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.
Note:    For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from
         the upstream cross section.  The selected bridge modeling method does not compute answers inside the bridge.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
          This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate the
         need for additional cross sections.
Note:    For the cross section inside the bridge at the downstream end, the water surface and energy are based on critical
         depth over the weir.

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
       Momentum               Cd   =       2
```

Selected Low Flow Methods = Momentum

High Flow Method
Pressure and Weir flow
Submerged Inlet Cd =
Submerged Inlet + Outlet Cd = .8
Max Low Cord =

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Note: Momentum answer is not valid if the water surface is above the low chord or if there is weir flow. The momentum answer has been disregarded.
Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate the
         need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
         water surface came back below critical depth.  This indicates that there is not a valid subcritical answer.  The program
         defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
         water surface came back below critical depth.  This indicates that there is not a valid subcritical answer.  The program
         defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Low Flow Methods and Data
Momentum Cd = 1.33
Selected Low Flow Methods = Momentum

```
High Flow Method
       Pressure and Weir flow
           Submerged Inlet Cd          =
           Submerged Inlet + Outlet Cd =      .8
           Max Low Cord                =

Additional Bridge Parameters
       Add Friction component to Momentum
       Add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream water surface

Note:    Momentum answer is not valid if the water surface is above the low chord or if there is weir flow.  The momentum
         answer has been disregarded.
Note:    The downstream water surface is above the minimum elevation required for orifice flow.  The orifice flow equation was
         used for pressure flow.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The cross-section end points had to be extended vertically for the computed water surface.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Flow Title : 100-yr +
Flow File : F:\882\LOMR Dec 2011\LOMR 2007\Proposed Supercritical HECRAS Model\FWLomr_sup.f04

Plan Summary Information:
Number of: Cross Sections = 105 Multiple Openings = 0
Culverts = 2 Inline Structures = 0
Bridges = 4 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Supercritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
       Momentum               Cd   =     1.2
Selected Low Flow Methods = Momentum

High Flow Method
       Pressure and Weir flow
           Submerged Inlet Cd          =
           Submerged Inlet + Outlet Cd =      .8
           Max Low Cord                =

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

Note: Momentum answer is not valid if the water surface is above the low chord or if there is weir flow. The momentum answer has been disregarded.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.
Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Note: Manning's n values were composited to a single value in the main channel.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: During the supercritical analysis, there was not enough energy for supercritical flow going into the culvert.  The program
         assumed critical depth at the inlet.
Warning: During supercritical calculations, the culvert inlet depth is at or above critical depth and the culvert slope is mild.  The
         outlet depth has defaulted to critical depth.  For best results, this profile should be run in a mixed flow regime.
Note:    The normal depth exceeds the height of the culvert.  The program assumes that the normal depth is equal to the height
         of the culvert.

*************************************************************************************************

Warning: There was not enough momentum to compute a supercritical answer through the bridge.  The momentum answer has
         been disregarded.
Note:    Momentum answer is not valid if the water surface is above the low chord or if there is weir flow.  The momentum
         answer has been disregarded.
Warning: The energy equation could not be balanced within the specified number of iterations.  The program used critical depth
         for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
          This may indicate the need for additional cross sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
       Momentum               Cd   =       2
Selected Low Flow Methods = Momentum

High Flow Method
       Pressure and Weir flow
```

Submerged Inlet Cd =
Submerged Inlet + Outlet Cd = .8
Max Low Cord =

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Note: Momentum answer is not valid if the water surface is above the low chord or if there is weir flow. The momentum answer has been disregarded.
Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and assumed values.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.
Note: Manning's n values were composited to a single value in the main channel.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.
This may indicate the need for additional cross sections.

Warning: There was not enough momentum to compute a supercritical answer through the bridge.  The momentum answer has
         been disregarded.
Note:    Momentum answer is not valid if the water surface is above the low chord or if there is weir flow.  The momentum
         answer has been disregarded.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m).  This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.  This may indicate the
         need for additional cross sections.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest, valid, water surface was used.

			Area Total[5]	**291.70**	

Station where flow breaks out down Twain Ave.

Total Area of Breakout Flow 83.8 sf

Area Ratio[7] 0.287

Breakout Flow[8] 220 cfs

Notes:

1) Station for internal cross section at HECRAS Culvert No. 5800

2) Elevation at the centerline of Eastern Avenue

3) Depth = WSE - Elevation

4) Flow Area = $0.5*(Depth_{i+1} + Depth_i) \times (Station_{i+1} - Station_i)$

5) Note that Area Total also equals total weir flow area from HECRAS Detailed Output Table for Culverts 5800 (Eastern Avenue)

6) Water Suface Elevation is set so that Area Total[5] equals weir flow area from HECRAS Detailed Ouput Table for Culverts 5800 (Eastern Avenue)

7) Ratio of Total Area of Breakout Flow to Area total = 83.8 sf / 291.70 sf

8) Breakout Flow = Weir Flow from HECRAS Detailed Output Table for Culverts 5800 (Eastern Avenue) x Area Ratio = 767 cfs x .287

---Summary of Statistics---

	Minimum	Maximum
Left Overbank n Value:	0.015	0.04
Right Overbank n Value:	0.015	0.16
Channel n Value:	0.013	0.04
Contraction Coefficient:	0	0.3
Expansion Coefficient:	0	0.5

ROUGHNESS COEFFICIENT CHECK

RS: 8837.78
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8837.78
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a
concrete lined channel.

RS: 8807.78
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8807.78
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a
concrete lined channel.

RS: 8687.78
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8687.78
NT RC 03 Channel n value is equal to or less than 0.025
The n value of the channel is usually larger than 0.025.
The n value should be reevaluated it if is not representing a
concrete lined channel.

RS: 8200
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8200
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8200
NT RC 05 The left overbank n value of 0.03 and the right overbank n value
of 0.03 are less than or equal to the channel n value of 0.04
The overbank n values should be reevaluated.

RS: 8100
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8100
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8100
NT RC 05 The left overbank n value of 0.03 and the right overbank n value
of 0.03 are less than or equal to the channel n value of 0.04
The overbank n values should be reevaluated.

RS: 8000
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8000
NT RC 01 Right overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 8000
NT RC 05 The left overbank n value of 0.03 and the right overbank n value
of 0.03 are less than or equal to the channel n value of 0.04
The overbank n values should be reevaluated.

RS: 7900
NT RC 01 Left overbank n value is less than 0.035
The n value for overbank is usually larger then 0.035.
The n value should be reevaluated.

RS: 7900
NT RC 01 Right overbank n value is less than 0.035

```

DISTANCE CHECK

SPACING CHECK

XS SP 02 This is an interpolated cross section.
Interpolation of the cross sections should be performed only when all of the following conditions are met.
Change in velocity head > 0.5
Conveyance Ratio < 0.7 or Conveyance Ratio > 1.4
Hydraulic Depth Ratio < 0.9 or Hydraulic Depth Ratio > 1.1
Top Wdth Act Ratio < 0.5 or Top Wdth Act Ratio > 2.0
Length Chnl Up / 500 > 1.1
Please review the file with no interpolation and select the cross sections that meet the above criteria to consider interpolation.
The following is the list of interpolated cross section:

FLAMINGO WASH FROM EASTERN AVENUE TO DESERT INN ROAD

P:\CCPW\CB882-Flamingo_Wash-Spencer_To_DI\Plans\As-Builts\Flamingo Wash As-Built Sheets\Title Sheets\882-Cover.dwg Mar 02, 2012 - 2:32pm jschmelz

BASIS OF BEARINGS

THE BASIS OF BEARINGS FOR THIS SURVEY IS N 14°17'52" E BEING THE GRID BEARING BETWEEN LAS VEGAS VALLEY WATER DISTRICT STATION (LVVWD) AND CLARK COUNTY CORS STATION CARLTON WITH THE FOLLOWING NEVADA COORDINATE SYSTEM, EAST ZONE, VALUES BASED ON THE NORTH AMERICAN DATUM OF 1983/1994 HIGH ACCURACY REFERENCE NETWORK (NAD '83/'94–HARN):

LVVWD (GRID)	NORTHING	87794759.902 METERS	(26759896.338 US SURVEY FOOT)
	EASTING	2532410.490 METERS	(771880.261 US SURVEY FOOT)
CARLTON (GRID)	NORTHING	8786681.845 METERS	(26781879.150 US SURVEY FOOT)
	EASTING	2550791.050 METERS	(777482.667 US SURVEY FOOT)

DISTANCES SHOWN FOR THIS SURVEY ARE GROUND EQUIVALENT VALUES, BASED ON A PROJECT SPECIFIC LOCAL PROJECTION COMBINED FACTOR OF 0.9998354581 DERIVED FROM GEODETIC OBSERVATIONS OBTAINED USING THE GLOBAL POSITIONING SYSTEM (GPS).

BENCHMARK

CLARK COUNTY BENCH MARK STATION 6C11 12SSE6. 2" DOME HEAD BRASS CAP REFERENCE MONUMENT IN TOP OF CURB, NORTHEAST CORNER OF DESERT INN ROAD AND MOJAVE ROAD NEAR THE PC OF DESERT INN ROAD
ELEVATION = 569.314 METERS
(1867.82 FEET) NAVD 88.

CLARK COUNTY BENCH MARK STATION 8C11 13W4 1998. RIVET AND ROUND ALUMINUM PLATE IN TOP OF CURB, NORTHEAST CORNER OF EASTERN AVENUE AND TWAIN AVENUE NEAR THE PC OF EASTERN AVENUE
ELEVATION = 584.619 METERS
(1918.04 FEET) NAVD 88.

CLARK COUNTY BENCH MARK STATION 7C11 14SSW6. RIVET AND SQUARE ALUMINUM PLATE IN TOP OF CURB, NORTHEAST CORNER OF FLAMINGO ROAD AND TAMARUS STREET – ALGONQUIN DRIVE NEAR PC OF FLAMINGO ROAD
ELEVATION = 604.305 METERS
(1982.62 FEET) NAVD 88.

GEOTECHNICAL REPORT

GEOTECHNICAL REPORT PREPARED BY:
CONVERSE CONSULTANTS, FEBRUARY 12, 2009
PROJECT NUMBER 04–33372–01
ENTITLED: GEOTECHNICAL INVESTIGATION FLAMINGO WASH IMPROVEMENTS FROM SPENCER STREET TO DESERT INN ROAD
CLARK COUNTY, NEVADA

CLARK COUNTY PUBLIC WORKS GENERAL NOTES

1 ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE "UNIFORM STANDARD DRAWINGS FOR PUBLIC WORKS CONSTRUCTION OFFSITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA" AND "UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFFSITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA", AND APPENDICES, CURRENT EDITION.

2 TRAFFIC SIGNAL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE "UNIFORM STANDARD DRAWINGS FOR PUBLIC WORKS' CONSTRUCTION OFFSITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA VOLUME II" CURRENT EDITION.

3 ALL UTILITIES SHOWN ARE BELIEVED TO BE ACCURATELY LOCATED. CONTRACTOR IS RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL UTILITIES LIKELY TO BE AFFECTED. THE CONTRACTOR SHALL DETERMINE THE LOCATION AND DEPTH OF SUSPECTED UTILITY INTERFERENCES, AND SHALL FURNISH INFORMATION ON THE SAME TO THE ENGINEER, NOT LESS THAN TEN (10) DAYS PRIOR TO THE ANTICIPATED IMPACT OF THESE SUSPECTED INTERFERENCES ON HIS WORK. IF CONFLICTS EXIST, THE CONTRACTOR WILL IMMEDIATELY CONTACT THE ENGINEER AND PROVIDE THE ENGINEER WITH ALL THE NECESSARY DATA SUCH AS ELEVATIONS, HORIZONTAL LOCATIONS, ETC., AND PROVIDE THE ENGINEER WITH SKETCHES INDICATING THE PROPOSED IMPROVEMENT AND THE UTILITY CONFLICT. THE ENGINEER WILL EXAMINE AND REVIEW ALL THE DATA AND SKETCHES PROVIDED, AND WILL PROVIDE THE CONTRACTOR WITH AN ALTERNATIVE DESIGN WITHIN FIVE (5) DAYS AFTER RECEIPT OF DATA AND SKETCHES.

4 CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES AT LEAST SEVENTY–TWO (72) HOURS PRIOR TO BEGINNING CONSTRUCTION

5 SIGNATURES SHOWN ON THE COVER OF THESE PLANS, BY THE LOCAL UTILITY COMPANIES DOES NOT ASSUME OR GUARANTEE THEIR LIABILITY FOR KNOWN OR UNKNOWN CONFLICTS WITH EXISTING OR PROPOSED IMPROVEMENTS. RESOLUTION OF ANY CONFLICTS WILL BE ACCOMPLISHED PURSUANT TO LOCAL ORDINANCES, NEVADA REVISED STATUTES AND/OR PUBLIC UTILITY COMMISSION RULES AND REGULATIONS.

6 THE CONTRACTOR SHALL COORDINATE WITH THE NV ENERGY COMPANY, EMBARQ CORPORATION, LOCAL CABLE COMPANY AND THE SOUTHWEST GAS CORPORATION FOR THE RELOCATION OF UNDERGROUND OR OVERHEAD UTILITIES THAT INTERFERE WITH THE REQUIRED IMPROVEMENTS AS SHOWN ON THE PLANS.

7 THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERTICAL ADJUSTMENT OF ALL LAS VEGAS VALLEY WATER DISTRICT FACILITIES AND CLARK COUNTY WATER RECLAMATION DISTRICT MANHOLES AS INDICATED ON THE PLANS OR IN THE SPECIAL PROVISIONS UNLESS OTHERWISE INDICATED.

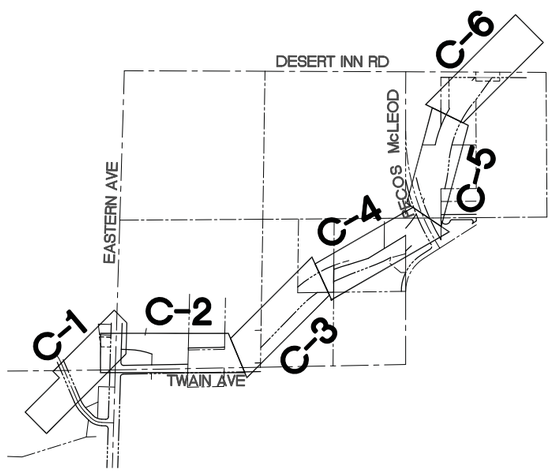

8 THE CONTRACTOR SHALL NOT REMOVE TREES, SHRUBS, LAWNS, WALLS, FENCES, SIGNS, STRUCTURE, LIGHTS OR ANY OTHER IMPROVEMENTS OUTSIDE THE RIGHT–OF–WAY EXCEPT WHERE REQUIRED TO DO SO BY THE CONTRACT DRAWINGS OR AS DIRECTED BY THE ENGINEER.

9 EXACT LOCATIONS OF ALL SAWCUT LINES SHALL BE DETERMINED IN THE FIELD BY THE ENGINEER. THOSE SAWCUTS THAT ARE LONGITUDINAL TO THE ROADWAY MAY BE WHEEL CUT WITH EQUIPMENT AS APPROVED BY THE ENGINEER. ALL OTHER SAWCUTS SHALL BE MADE BY A ROTARY SAW.

10 IF THE IMPROVEMENTS NECESSITATE THE OBLITERATION, TEMPORARY OBSTRUCTION, TEMPORARY REMOVAL, OR RELOCATION OF ANY EXISTING TRAFFIC PAVEMENT MARKING REQUIRED TO REMAIN, SUCH PAVEMENT MARKING SHALL BE RESTORED OR REPLACED WITH LIKE MATERIALS TO THE SATISFACTION OF THE COUNTY TRAFFIC MANAGER.

11 FAST INTERCONNECT CABLE POLICY IS IN EFFECT. INTERCONNECT/FIBER OPTIC CABLE MUST BE MAINTAINED AT ALL TIMES. CONTRACTOR SHALL PROVIDE TEMPORARY OVERHEAD INTERCONNECT/FIBER OPTIC CABLE WHILE PERMANENT CABLE IS BEING RELOCATED. TEMPORARY AERIAL INSTALLATION MUST BE ACCEPTABLE TO THE COUNTY TRAFFIC MANAGER AND TO FAST. ANY DAMAGE TO THIS CABLE IS DEEMED AN EMERGENCY BY FAST, CITY OF LAS VEGAS, CLARK COUNTY AND NDOT AND MUST BE REPAIRED IMMEDIATELY TO FAST ACCEPTANCE. DAMAGES MAY BE ASSESSED AGAINST THE CONTRACTOR AFTER 24 HOURS HAS ELAPSED FROM THE TIME OF BREAK OR DAMAGE. $2,500 PER DAY FOR DAMAGE TO COPPER WIRED INTERCONNECT CABLE AND $7,500 PER DAY FOR DAMAMGE TO FIBER OPTIC CABLE.

12 ALL STORM DRAIN MANHOLE ACCESS COVERS SHALL HAVE A MINIMUM DIAMETER OF THIRTY (30") INCHES.

CLARK COUNTY WATER RECLAMATION DISTRICT
GENERAL NOTES:

1. ALL CONSTRUCTION AND MATERIALS SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE DESIGN & CONSTRUCTION STANDARDS FOR WASTEWATER COLLECTION SYSTEMS AND UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS' CONSTRUCTION OFF SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA, AS AMENDED. IN ALL CASES, THESE STANDARDS SHALL SUPERSEDE THE UNIFORM STANDARD SPECIFICATIONS. IT WILL BE THE RESPONSIBILITY OF THE CONTRACTOR TO BE AWARE OF THE CONTENTS OF THE ABOVE SPECIFICATION BOOKS.
2. THESE STANDARDS SHALL APPLY TO ALL CONSTRUCTION.
3. SEWER MAINS ONLY TO BE LAID IN SEWER TRENCHES.
4. ALL LATERALS TO BE LAID AT NOT LESS THAN MINIMUM SLOPES AS SHOWN IN THESE STANDARDS.
5. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PERFORM CONSTRUCTION AS PER PLANS. ANY ADDITIONS, DELETIONS, OR CHANGES SHALL FIRST MEET WITH THE APPROVAL OF THE CONTROLLING AGENCY.
6. SOIL TESTING SHALL BE IN ACCORDANCE WITH SECTION 3.11 OF THE ABOVE MENTIONED STANDARDS.
7. ALL EXFILTRATION, INFILTRATION, AIR TESTING AND TELEVISING OF LINES SHALL BE IN ACCORDANCE WITH THE ABOVE MENTIONED STANDARDS.
8. CUT SHEETS MUST BE SUBMITTED TO THE AGENCY BEFORE CONSTRUCTION WILL BE PERMITTED TO START.
9. ALL CONTRACTORS INSTALLING SEWER MAINS THAT WILL BE UNDER THE JURISDICTION OF THE CONTROLLING AGENCY MUST BE CLASS "A" CONTRACTORS.

LAS VEGAS VALLEY WATER DISTRICT
STANDARD NOTES:

LVVWD PROJECT NO. 103520

1. NO WORK SHALL BEGIN UNTIL THE WATER PLANS HAVE BEEN APPROVED FOR CONSTRUCTION BY THE LVVWD. FOLLOWING WATER PLAN APPROVAL, NOTICE SHALL BE GIVEN TO THE LVVWD COMMUNICATION SUPPORT CENTER (258-7171) TWO (2) WORKING DAYS PRIOR TO THE START OF CONSTRUCTION. FOR FUTURE INSPECTIONS, NOTICE MUST BE GIVEN BY 2:00 P.M. THE BUSINESS DAY PRIOR TO THE REQUESTED LVVWD INSPECTION. WHEN REQUESTING INSPECTIONS, PLEASE REFER TO THE PROJECT # IDENTIFIED ABOVE.
2. ALL WORK SHALL CONFORM TO LVVWD STANDARD PLATES, DRAWINGS, AND SPECIFICATIONS, AND TO THE 2003 EDITION OF THE UNIFORM DESIGN AND CONSTRUCTION STANDARDS FOR POTABLE WATER SYSTEMS (UDACS).
3. ALL WORK, EXCEPT AS MODIFIED BY THESE PLANS OR BY NOTE 2 ABOVE, SHALL BE DONE IN ACCORDANCE WITH THE MOST RECENT DRAFT OR EDITION OF THE UNIFORM SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFF SITE IMPROVEMENT, CLARK COUNTY AREA.
4. A SINGLE PIPE MATERIAL SHALL BE USED THROUGHOUT THE PROJECT UNLESS OTHERWISE APPROVED BY THE LVVWD.
5. ALL SERVICE LATERALS TWO (2) INCHES IN DIAMETER AND SMALLER SHALL BE TYPE K COPPER TUBING WITH LVVWD APPROVED SERVICE LATERALS.
6. ALL WATER METER BOXES SHALL BE LOCATED OUTSIDE OF DRIVEWAYS AREAS.
7. ALL VALVES SHALL BE LOCATED OUTSIDE OF DRIVEWAYS, VALLEY AND CURB GUTTERS.
8. ALL WATER AND STORM DRAIN OR SANITARY SEWER CROSSINGS SHALL CONFORM TO SECTION 2.19 OF THE 2003 EDITION OF THE UDACS.
9. ALL WATER FACILITIES SHALL BE FILLED, DISINFECTED, PRESSURE TESTED, FLUSHED, FILLED AND AN ACCEPTABLE WATER SAMPLE OBTAINED, PRIOR TO CONNECTION TO THE LVVWD DISTRIBUTION SYSTEM.
10. THE CONTRACTOR MUST OBTAIN ALL METERS TWO (2) INCHES AND SMALLER FROM LVVWD CENTRAL STORES. TELEPHONE 258-3152 OR 258-3802, TWO (2) WORKING DAYS PRIOR TO METER PICKUP.
11. ANY INTERRUPTION OF SERVICE MUST BE PERFORMED IN ACCORDANCE WITH UDACS SECTION 3.13.01 AND APPROVED BY THE LVVWD INSPECTION DIVISION PRIOR TO SHUTDOWN. PROPER WRITTEN NOTIFICATION MUST BE GIVEN TO ALL AFFECTED CUSTOMERS.
12. ALL WATER FACILITY CONSTRUCTION MATERIALS USED MUST BE AS LISTED ON THE LVVWD PRE-APPROVED MATERIALS AND MANUFACTURER'S LISTING FOR NEW FACILITIES, LATEST REVISION OR SPECIFICALLY APPROVED ON THESE PLANS.
13. TELEPHONE "CALL BEFORE YOU DIG" AT 1-800-227-2600 OR 811.

APPROVAL OF THESE PLANS SHALL NOT BE CONSTRUED TO BE A PERMIT FOR, OR AN APPROVAL OF, ANY VIOLATION OF ANY OF THE PROVISIONS OF THE STATE OR COUNTY LAWS.

LAS VEGAS VALLEY WATER DISTRICT DATE
PROJECT NO. 103520

CLARK COUNTY WATER RECLAMATION DISTRICT
SPECIAL NOTES:

1. BEFORE EXISTING SEWER LINES MAY BE REMOVED OR ABANDONED, ALL SERVICE LATERALS TIED TO THESE LINES SHALL BE RELOCATED TO NEW INSTALLED SEWERS. CONTINUOUS SERVICE SHALL BE MAINTAINED TO ALL CCWRD CUSTOMERS.
2. AS TEMPORARY LINES ARE TAKEN OUT OF SERVICE, ALL MANHOLE BASES SHALL BE REWORKED AND GROUTED TO SHOW ONLY THOSE FLOW CHANNELS THAT REMAIN.
3. ALL REMOVED AND/OR ABANDONED SEWER AND MANHOLE WORK ITEMS SHALL BE PERFORMED IN ACCORDANCE WITH SECTION 3.14 OF THE CCWRD DESIGN AND CONSTRUCTION STANDARDS.
4. ALL REMOVED MANHOLES ON THIS PROJECT SHALL BE ABANDONED BY REMOVING ALL COMPONENTS AND RETURNING SALVAGEABLE PARTS TO THE CCWRD OFFICES AT THE CONTRACTOR'S EXPENSE, AND CRACKING THE MANHOLE BASES TO PERMIT DRAINAGE. COMPONENTS NOT DEEMED SALVAGEABLE BY A CCWRD INSPECTOR SHALL BE HAULED OFF SITE AND DISPOSED OF BY THE CONTRACTOR.
5. EXTEND ALL EXISTING SEWER LATERALS NOT OTHERWISE RELOCATED TO NEW R/W. LINE, CAP AND PLUG. (NO DIRECT PAYMENT) CONTRACTOR'S SURVEYOR TO SUPPLY HORIZONTAL COORDINATES, DRAWING SHEET NUMBER AND INVERT ELEVATIONS, TO THE NEAREST TENTH OF A FOOT, AT EACH LATERAL. A COMPLETE TABLE TO BE SUBMITTED TO CCWRD ENGINEERING PRIOR TO PROJECT FINALIZATION.

LAS VEGAS VALLEY WATER DISTRICT
SPECIAL NOTES:

1. THE LOCATION OF WATER SERVICE IS NOT SHOWN ON THE DRAWINGS. HOWEVER, IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO RELOCATE ALL WATER SERVICES INTERFERING WITH CONSTRUCTION ACCORDING TO THE LAS VEGAS VALLEY WATER DISTRICT'S STANDARDS. ANY WATER METER TO BE OUT OF SERVICE MUST BE PROVIDED WITH TEMPORARY SERVICE.
2. "FIRE HYDRANT AND LATERAL ABANDONMENT" (EXISTING LATERAL TO BE ABANDONED) WHERE SHOWN ON THE DRAWING(S), THE CONTRACTOR SHALL ABANDON THE EXISTING FIRE HYDRANT(S) BY REMOVING BOTH THE UPPER AND LOWER BARRELS OF THE FIRE HYDRANT SO THAT NO PORTION OF THE REMAINING FIRE HYDRANT ASSEMBLY IS CLOSER THAN TWO (2) FEET TO THE EXISTING GRADE. FIRE HYDRANTS SHALL BE TESTED PRIOR TO AND AFTER RELOCATION UNDER THE DIRECTION OF THE DISTRICT TO ENSURE QUALITY OF THE FIRE HYDRANT(S). THE EXISTING HYDRANT SHALL BE INSTALLED AT THE NEW LOCATION AS INDICATED ON THE DRAWING, IN ACCORDANCE WITH UDACS PLATE 7. THE EXISTING VALVE SHALL BE ABANDONED IN A CLOSED POSITION, UNLESS SHOWN OTHERWISE, BY REMOVING A MINIMUM OF THE TOP TWENTY-FOUR (24) INCHES OF THE VALVE BOX, AND THEN FILLING THE BOTTOM OF THE BOX WITH A MINIMUM OF EIGHT (8) INCHES OF SAND OR TYPE 2 AGGREGATE BASE, THE REMAINING PORTION OF THE VALVE BOX SHALL BE FILLED WITH CONCRETE HAVING A COMPRESSIVE STRENGTH OF AT LEAST TWO THOUSAND (2000) PSI. THE LATERAL SHALL BE CUT WITHIN THREE (3) FEET OF THE ABANDONED VALVE, OR AS SHOWN ON PLANS, AND CAPPED. WHERE A JOINT OR COUPLING IN THE EXISTING PIPE IS UNCOVERED AT THE CUT AND CAP LOCATION, THE INSTALLATION OF A PLUG MAY BE PERMITTED, WITH DISTRICT APPROVAL. A CONCRETE THRUST BLOCK SHALL BE INSTALLED AT ALL CUT AND CAP LOCATIONS IN ACCORDANCE WITH THE PROVISIONS OF UDACS PLATE 5.
3. ABANDONMENT OF EXISTING SERVICE(S) – LARGER THAN 2" ALL VALVES TO BE ABANDONED SHALL BE ABANDONED IN THE CLOSED POSITION, UNLESS SHOWN OTHERWISE, BY REMOVING A MINIMUM OF THE TOP 24 INCHES OF THE VALVE BOX AND THEN FILLING THE REMAINING PORTION OF THE VALVE BOX WITH CONCRETE HAVING A COMPRESSIVE STRENGTH OF AT LEAST 2000 PSI THE CONTRACTOR SHALL CUT THE EXISTING PIPE 3'± BEYOND THE ABANDONED VALVE AND INSTALL A CAP. WHERE A JOINT OR COUPLING IN THE EXISTING PIPE IS UNCOVERED AT THE CUT AND CAP LOCATIONS, THE INSTALLATION OF A PLUG MAY BE PERMITTED, WITH DISTRICT APPROVAL. THE CONTRACTOR SHALL INSTALL A CONCRETE THRUST BLOCK IN ACCORDANCE WITH THE PROVISIONS OF THE DISTRICT'S STANDARD PLATE NO 5 AT ALL CAP OR PLUG LOCATIONS. THE EXISTING METER(S) SHALL BE REMOVED AND DELIVERED TO THE DISTRICT. THE CONTRACTOR SHALL THEN REMOVE AND/OR BACK FILL THE ABANDONED VAULT WITH TYPE II MATERIAL.
4. RECONNECTION OF SERVICE LATERALS 2" AND SMALLER ALL SERVICE LATERALS 2" AND SMALLER THAT ARE CUT OR DAMAGED MAY BE RECONNECTED, PROVIDED THE FOLLOWING CRITERIA ARE MET:
   1) IF THE LATERAL IS COPPER, THE LATERAL MAY BE CUT AND SPLICED NOT MORE THAN ONCE IN A MANNER APPROVED BY THE DISTRICT.
   2) IF THE LATERAL IS NOT COPPER, THE LATERAL MUST BE ABANDONED FROM THE EXISTING WATER MAIN, AND REPLACED WITH A COPPER SERVICE LATERAL PER UDACS PLATE NO 1B OR 1D. IF THE CORPORATION STOP IS DAMAGED BEYOND REPAIR OR PULLED FROM THE EXISTING WATER MAIN, THE MAIN SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE IN A MANNER APPROVED BY THE LVVWD. IF THE CORPORATION STOP IS NOT WATER TIGHT, THE CONTRACTOR SHALL NOTIFY LVVWD COMMUNICATION SUPPORT CENTER (702-258-7171) FOR FUTURE DIRECTION.

   THE CONTRACTOR SHALL INSTALL A NEW SERVICE OF LIKE SIZE ADJACENT TO THE DAMAGED SERVICE IN ACCORDANCE WITH UDACS PLATE NO 1B OR 1D. ESN.031 REV 6/1/04.
5. EASEMENT WITH TREES, SHRUBS, DECORATIVE ROCKS, BLOCK WALL, OR FENCE TREES, SHRUBS, OR DECORATIVE ROCKS AND ANY BLOCK WALL OR OTHER FENCE MATERIAL, SHALL BE DESIGNED AND CONSTRUCTED AROUND THE EASEMENT(S) TO ALLOW THE DISTRICT ACCESS TO THE VAULT(S), BACK FLOW ASSEMBLIES, AND PIPING FROM THE ADJACENT RIGHT-OF-WAY. ESN.008 REV 6/1/04.
6. CUT AND CAP
   THE LATERAL MUST BE CUT WITHIN THREE (3) FEET OF THE ABANDONED VALVE, OR AS SHOWN ON PLANS, AND CAPPED. THE CONTRACTOR SHALL CUT THE EXISTING PIPE WHERE SHOWN ON THE DRAWING, AND INSTALL A CAP COMPLETE WITH THRUST BLOCK. WHERE A JOINT OR COUPLING IN THE EXISTING PIPE IS UNCOVERED AT THE CUT AND CAP LOCATIONS, THE INSTALLATION OF A PLUG MAY BE PERMITTED WITH DISTRICT APPROVAL. A CONCRETE THRUST BLOCK SHALL BE INSTALLED AT ALL CAP OR PLUG LOCATIONS, IN ACCORDANCE WITH THE PROVISIONS OF UDACS PLATE 5. ESN.003 REV 6/1/04.
7. STEEL CASING
   INSTALL WATERLINE IN STEEL CASING PER UDACS PLATES NO 15 AND 16. MINIMUM 18-INCH CLEARANCE IS REQUIRED ABOVE THE TOP OF THE CASING. FROM THE UPPER BENDS THROUGHOUT THE LOWERED SECTION OF PIPE, DUCTILE IRON PIPE WITH RESTRAINED JOINTS IS REQUIRED. IN ADDITION, THRUST BLOCKS ARE TO BE INSTALLED AT THE UPPER BENDS. ESN.038 REV 6/1/04.
8. ANNULAR SPACE BETWEEN PIPE AND CASING SHALL BE FILLED WITH CLASS 1 CLSM. ESN.038A REV 4/20/05.
9. INSTALL PIPELINE MARKER BALLS IN TRENCH ABOVE EACH HORIZONTAL ELBOW FITTING, PER UDACS PLATE NO 27. ESN.062 REV 6/1/04.
10. APPROVED REDUCED PRESSURE PRINCIPAL ASSEMBLY SHALL BE INSTALLED PER UDACS PLATE NO 11A OR 11C. NO WATER SHALL BE TAKEN FROM A SERVICE REQUIRING BACKFLOW PREVENTION UNTIL THE REDUCED PRESSURE PRINCIPAL ASSEMBLY HAS BEEN SUCESSFULLY TESTED BY THE LVVWD.

    ANY BLOCK WALL OR OTHER FENCE MATERIAL SHALL BE DESIGNED AND CONSTRUCTED AROUND THE OUTSIDE OF THE EASEMENT(S) TO ALLOW THE DISTRICT DIRECT ACCESS FROM THE ADJACENT RIGHT-OF-WAY.

    EASEMENTS SHALL BE CLEARLY MARKED OR STAKED PRIOR TO THE START OF CONSTRUCTION. ESN.026 REV 6/1/04.
11. THE DISTRICT CANNOT GUARANTEE A WATERTIGHT SHUTDOWN WHERE CONNECTIONS OR REPAIRS TO EXISTING FACILITIES ARE REQUIRED. THE CONTRACTOR SHALL ENSURE ALL LABOR AND EQUIPMENT IS AVAILABLE TO REMOVE FUGITIVE WATER THAT MAY IMPEDE CONSTRUCTION AT ALL TIMES. COORDINATION WITH INSPECTION DIVISION MUST TAKE PLACE PRIOR TO ANY TRIAL SHUTDOWN.

    CONTRACTOR SHALL INSTALL TEMPORARY SERVICE TO ENSURE PROPER SHUTDOWN IN THE EVENT NO OTHER APPURTENANCES ARE AVAILABLE. ESN.048 REV 6/1/04.
12. ABANDONED VALVE CUT AND CAP
    ALL VALVES TO BE ABANDONED SHALL BE ABANDONED IN THE CLOSED POSITION, UNLESS SHOWN OTHERWISE, BY REMOVING A MINIMUM OF THE TOP TWENTY-FOUR (24) INCHES OF THE VALVE BOX, AND THEN FILLING THE BOTTOM OF THE BOX WITH A MINIMUM OF EIGHT (8) INCHES OF SAND OR TYPE II AGGREGATE BASE, THE REMAINING PORTION OF THE VALVE BOX SHALL BE FILLED WITH CONCRETE HAVING A COMPRESSIVE STRENGTH OF AT LEAST TWO THOUSAND (2000) PSI. THE LATERAL SHALL BE CUT WITHIN THREE (3) FEET OF THE ABANDONED VALVE, OR AS SHOWN ON PLANS, AND CAPPED. WHERE A JOINT OR COUPLING IN THE EXISTING PIPE IS UNCOVERED AT THE CUT AND CAP LOCATION, THE INSTALLATION OF A PLUG MAY BE PERMITTED, WITH DISTRICT APPROVAL. A CONCRETE THRUST BLOCK SHALL BE INSTALLED AT ALL CUT AND CAP LOCATIONS IN ACCORDANCE WITH THE PROVISIONS OF UDACS PLATE 5. ESN.033 REV 6/1/04.
13. THIS PROJECT PROVIDES FOR THE OFF-SITE MAINS ONLY, AND DOES NOT PROVIDE OR IMPLY ANY WATER COMMITMENT. ESN.054 REV 6/1/04.

CLARK COUNTY PUBLIC WORKS
GENERAL NOTES:

NOTE: 'A'

NV ENERGY, EMBARQ TELEPHONE, AND SOUTHWEST GAS SHOWN FOR INFORMATION ONLY. REFERENCE NV ENERGY, EMBARQ TELEPHONE, AND SOUTHWEST GAS DRAWINGS FOR CONSTRUCTION DETAILS. CONTRACTOR TO COORDINATE WITH UTILITIES FOR REMOVAL AND INSTALLATION OF FACILITIES.

NOTE: 'B'

ALL EXISTING UTILITY LOCATIONS SHOWN HEREON ARE APPROXIMATE ONLY. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO DETERMINE THE EXACT VERTICAL AND HORIZONTAL LOCATION OF ALL EXISTING UNDERGROUND UTILITIES PRIOR TO COMMENCING CONSTRUCTION.
NO REPRESENTATION IS MADE THAT ALL UTILITIES ARE SHOWN HEREON. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR UTILITIES NOT SHOWN IN THEIR PROPER LOCATION.
THE DEPTH BELOW GRADE OF THE VARIOUS UTILITIES DEPICTED ON THE PLANS VARIES THROUGHOUT THE PROJECT AREA. THE CONTRACTOR SHALL EXERCISE EXTREME CARE WHERE EXCAVATING AND GRADING THE SUB-BASE IN THE VICINITY OF UTILITIES TO AVOID DAMAGE TO THE LATTER.

NV ENERGY REVIEW:

NV ENERGY ACKNOWLEDGES THAT WE HAVE RECEIVED YOUR PLANS AND WILL PROVIDE SERVICE TO ALL ELECTRICAL NEEDS ASSOCIATED WITH THIS PROJECT.
NV ENERGY RESERVES THE RIGHT TO ADDRESS ANY EXISTING OR FUTURE CONFLICTS ONCE THE FINAL DESIGN IS COMPLETED. THE NEW SERVICE AND THE RESOLUTION OF ANY CONFLICTS WILL BE ACCOMPLISHED PURSUANT TO THE NEVADA PUBLIC UTILITY COMMISSION'S RULES AND REGULATIONS.

APPROVAL:

NV ENERGY DATE

CLARK COUNTY WATER RECLAMATION DISTRICT DATE

CCWRD PROJECT CONTROL NUMBER IS 5162.06

SIGNATURE ON THESE PLANS SHALL NOT BE CONSTRUED TO BE A PERMIT FOR OR AN APPROVAL OF ANY VIOLATION OF CLARK COUNTY RECLAMATION DISTRICT RULES, REGULATIONS, OR DESIGN AND CONSTRUCTION STANDARDS. THE APPROVAL OF THESE DRAWINGS DOES NOT GUARANTEE CAPACITY IN THE DISTRICT'S COLLECTION OR TREATMENT SYSTEM.

17'-0"	#7 @ 6"	#5 @ 12"	#10 @ 6"	3'-8"	9'-4"	1'-3"	1'-8"

(SEE NOTE 12)

AS-BUILT

Based on Contractor Supplied Information Which Has Not Been Verified By The Louis Berger Group, Inc.

NOTES:

1. SEE GENERAL DRAINAGE NOTES SHEET D-14.
2. DIMENSIONS H (LT) AND H (RT) ARE THE HEIGHTS FROM THE FLOW LINE TO THE TOP OF WALL AT THE LEFT AND RIGHT SIDES OF THE CHANNEL, RESPECTIVELY. SEE CHANNEL PROFILE FOR VALUES OF H (LT) AND H (RT).
3. CROSS SECTION IS SHOWN FACING UPSTREAM.
4. THE CONTRACTOR MAY, AT HIS OPTION, CONSTRUCT A STEM WALL 6" ABOVE CHANNEL BOTTOM SLAB THAT IS POURED MONOLITHICALLY WITH CHANNEL BOTTOM SLAB. WEEPHOLE MAY THEN BE PLACED ABOVE KEYED CONSTRUCTION JOINT.
5. LONGITUDINAL CONSTRUCTION JOINT LOCATION TO BE APPROVED BY ENGINEER.
6. SEE SHEETS D-12 AND D-13 FOR JOINT DETAILS.
7. a) PROVIDE SMOOTH TRANSITION FROM 2% CROSS SLOPE AT STATION "FW" 56+48.42 TO MATCH BOTTOM OF EXISTING CULVERTS AT STATION "FW" 57+96±.
   b) PROVIDE SMOOTH TRANSITION FROM 2% CROSS SLOPE AT STATION "FW" 12+14.54 TO CROSS SLOPE OF EXISTING CHANNEL SECTION AT STATION "FW" 10+88.94.
   c) SEE GRADING DETAIL SHEET D-31 FOR CROSS SLOPE AND GRADES BETWEEN STATION "FW" 26+48.55 AND "FW" 27+03.87.
8. SEE SHEET D-18 FOR FOR TYPICAL EXCAVATION SECTION.
9. DIMENSION K IS THE WALL HEIGHT FROM THE TOE OF WALL TO THE TOP OF WALL.
10. MODIFY FOOTINGS OF CHANNEL WALLS ACROSS SANITARY SEWER AS SHOWN ON DETAIL A/D-4.
11. MODIFY FOOTINGS OF LEFT WALL AT VANBUSKIRK CONNECTION AS SHOWN ON DETAIL A/D-9.
12. LEFT CHANNEL WALLS WITH HEIGHTS GREATER THAN 14 FEET BETWEEN "FW" 23+00.00 AND "FW" 27+02.57 SHALL BE CONSTRUCTED USING THE K=14'-0" SCHEDULE OF DIMENSIONS AND REINFORCING STEEL.

NOTES:

1. SEE CHANNEL SECTION DETAIL A/D-1 FOR DIMENSIONS AND REINFORCEMENT NOT SHOWN.
2. JOINT SHALL BE SANDBLASTED CLEAN AND DRY PRIOR TO JOINT SEALANT AND MATERIAL APPLICATION.
3. NO SURFACE WATER OR GROUND-WATER SHALL DRAIN INTO JOINT, BUILT OR UNDER CONSTRUCTION, UNTIL FINAL PLACEMENT OF JOINT FILLER AND EPOXY ADHESIVE.
4. DEWATERING OPERATIONS SHALL CONTINUE UNTIL EPOXY ADHESIVE HAS CURED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.
5. EXPANSION JOINT DESIGN ASSUMES CONSTRUCTION WILL BE FROM DOWNSTREAM TO UPSTREAM. THE ENGINEER SHALL BE NOTIFIED 30 DAYS PRIOR TO CONSTRUCTION IF CONSTRUCTION IS TO OCCUR FROM UPSTREAM TO DOWNSTREAM.
6. TWO WEEKS (MINIMUM) AFTER CONSTRUCTION OF EACH JOINT CONTRACTOR SHALL MEASURE EACH JOINT TO DETERMINE THE WIDTH OF THE SEALANT MATERIAL REQUIRED. THE SEALANT MUST BE ORDERED AT THE MEASURED WIDTH FOR EACH JOINT PLUS 25% AND INSTALLED WITHIN TWO WEEKS OF DELIVERY AT THE JOB SITE.
7. THE EXPANSION JOINT STATION IS AT THE DOWNSTREAM SIDE OF EACH JOINT EXCEPT AT STATION "FW" 52+10.45 WHERE THE STATION IS CALLED OUT AT THE UPSTREAM SIDE (SEE DETAIL A/D-3).
8. STEEL PLATES SHALL BE PLACED ACROSS EXPANSION JOINTS TO PROTECT CONCRETE EDGES AND JOINT SEALANT FROM CONSTRUCTION TRAFFIC.
9. CONTRACTOR SHALL ENSURE THAT THE SUBGRADE BELOW THE CONCRETE CHANNEL IS COMPACTED TO 95% TO PREVENT CONCRETE SEEPAGE INTO SUBGRADE NEAR THE JOINT.
10. T EQUALS WALL FOOTING THICKNESS.
11. INSTALL FLOOR SLAB WEEPHOLES 10 FEET UPSTREAM OF CUTOFF WALL PER DETAIL B/D-35.

SECTION B-B
NTS

D > 24"

SECTION C-C
NTS

SECTION X-X
NTS

NOTES:

1. DIMENSION "A" AND "B" = PIPE OD + 6" FOR PIPE PERPENDICULAR TO WALL.

   DIMENSION "C" AND "D" = PIPE OD + 2" FOR PERPENDICULAR PIPE CONNECTION. ADJUST BLOCKOUT DIMENSIONS TO ACCOUNT FOR PIPE SKEW.

   CONTRACTOR SHALL ADJUST DIMENSIONS "A", "B", "C" AND "D" AS NECESSARY TO ACCOUNT FOR PIPE SKEW.

2. FORM PIPE BLOCKOUT AS PART OF WALL.

3. SEE CHANNEL PROFILES FOR CONNECTION LOCATIONS.

4. ADD REINFORCING BARS EQUIVALENT TO OR GREATER THAN THE SIZE AND NUMBER OF BARS CUT BY OPENING. VERTICAL BARS SHALL EXTEND FULL HEIGHT OF WALL. HORIZONTAL BARS SHALL EXTEND 24" PAST THE OPENING. SEE NOTE 5 FOR BAR SPACING.

5. ADD ADDITIONAL WALL REINFORCEMENT AT 3" OC EACH SIDE OF RCP OPENING TO REPLACE CUT TYPICAL REINFORCEMENT.

6. UNALTERED TYPICAL REINFORCING NOT SHOWN FOR CLARITY.

NOTES:

1. WALL & SLAB REINFORCEMENT OF CHANNEL AND RCB NOT SHOWN FOR CLARITY.

2. 1:1 CHAMFER APPLIED TO TOP AND SIDES OF CONNECTION.

PLAN

SECTION A-A

VIEW B-B

AS-BUILT

Based on Contractor Supplied Information Which Has Not Been Verified By The Louis Berger Group, Inc.

GENERAL NOTES:

1. ALL REINFORCING STEEL SHALL BE ASTM A706, GRADE 60. DIMENSIONS RELATING TO BAR SPACING ARE CENTER TO CENTER OF BAR.
2. ALL CONCRETE STRUCTURES SHALL BE CONSTRUCTED WITH CLASS D MODIFIED CONCRETE, f'_C=4,500 PSI AT 28 DAYS.
3. ALL CONCRETE SHALL BE TYPE V CEMENT WITH A WATER–CEMENT RATIO OF 0.45.
4. ALL CONSTRUCTION JOINTS SHALL BE INTENTIONALLY ROUGHENED TO ¼" AMPLITUDE. UNLESS OTHERWISE NOTED ALL REINFORCING BARS SHALL HAVE 2" CLEAR CONCRETE COVER. CHAMFER ALL EDGES OF CONCRETE ¾" UNLESS OTHERWISE NOTED.

CONSTRUCTION SEQUENCE:

1. BRACE EXISTING WINGWALL. SUBMIT BRACING CALCULATIONS AND DRAWINGS BY NEVADA LICENSED CIVIL ENGINEER FOR REVIEW.
2. EXPOSE EXISTING WINGWALL FOOTING TO LIMITS SHOWN.
3. SAW–CUT THROUGH FOOTING.
4. PAINT EXPOSED REBAR WITH COLD GALVANIZING COMPOUND, "ZRC" OR APPROVED EQUIVALENT.
5. EXCAVATE TO NEAT LINE SHOWN.
6. POUR FOOTING.
7. PLACE LOWER STEM AS SOON AS PRACTICAL AFTER FOOTING POUR.
8. PLACE UPPER STEM.
9. REMOVE BRACING AFTER 28 DAY STRENGTH HAS BEEN ACHIEVED FOR THE ENTIRE WALL.

NOTE:

PROPOSED SUBDIVISION CONTAINS 30 ADDITIONAL SINGLE FAMILY RESIDENTIAL UNITS TO BE SERVICED BY PROPOSED RELOCATED SANITARY SEWER.

SANITARY SEWER NOTE:

THE CCWRD MANAGEMENT COMMITTEE (7/12/07) HAS APPROVED THE DEPICTED 10" SANITARY SEWER ALIGNMENT TO TAKE THE EXISTING SIPHON OUT OF SERVICE. THIS APPROVAL INCLUDES THE FOLLOWING EXCEPTIONS TO THE DESIGN STANDARDS:

1. NO 0.2' DROP IN MANHOLES NUMBER 2, 3, 6, & 7.
2. DEPTH OF COVER OVER SEWER APPROVED AS SHOWN.
3. A 0.1' TOLERANCE TO MATCH CROWN IN MANHOLE NUMBER 1.
4. THE EXISTING 10' SS EASEMENT NORTH OF SIPHON MANHOLE (SSMH #8) IS OUTSIDE THE LIMITS OF THIS PROJECT AND SHALL REMAIN UNCHANGED AT THIS TIME.
5. OK TO USE TYPE II AGGREGATE BASE FOR ACCESS ROAD.
6. EXISTING 4" AND 6" SIPHON SHALL REMAIN IN SERVICE UNTIL THE RELOCATED SEWER SYSTEM IS COMPLETE, IN PLACE AND ACCEPTED BY THE CCWRD.

Clark County Public Works
Flamingo Wash, Desert Inn Road to Eastern Avenue
Bid No. 601462-09 Project No. F990813A

This is to certify as-built conditions for the Clark County Public Works project, Flamingo Wash, Desert Inn Road to Eastern Avenue, Bid No. 601462-09 and Project No. F990813A. Based on field assessment the improvements, concrete channel, maintenance ramps, modification to existing facilities and associated slope protection appear to have been constructed in substantial conformance with the improvement plans prepared by The Louis Berger Group, Inc., dated March 16, 2009. The channel and associated improvements are in place and functioning.

FEMA Production and Technical Services Contractor
165 Union Blvd., Suite 200
Lakewood, CO 80228

RE: Letter of Map Revision (LOMR) Case No. 12-08-1708P
Additional Data Requirement

Dear Ms. Weidmann:

This letter is in response to your request for additional information related to the Flamingo Wash Desert Inn Road to Spencer Street Request for Letter of Map Revision. The additional data requested in your letter are listed below followed by our response.

1. **The base floodplain top widths shown in the existing conditions HEC-RAS hydraulic analysis at Cross Sections 8320, 7000, 6736, 6577, 6469, and 6100 do not match the approximate base floodplain top widths shown on the topographic work map entitled, "Flamingo Wash Spencer Street to Desert Inn Road Hydraulic Workmap," prepared by the Louis Berger Group, Inc., dated April 2, 2012. Please provide an explanation for these discrepancies.**

   Based on our phone conversation, it appears that you may have an incorrect version of the work map. Please find attached the work map and GIS coverage for your use. Note that we have fine-tuned the floodplain delineation on the attached work map slightly in response to item 3 below. The top widths are consistent with the HEC-RAS model except for Section 8320 where we tie-in with the effective floodplain boundary.

2. **Several cross sections found in the submitted HEC-RAS hydraulic model along Flamingo Wash, including Cross Sections 5449.11, 5399.11, 5399.11, 5349.11, 5299.11, 5206.7, 5158.24, 5109.79, 5061.33, 4863.36, 4781.68, 4600, 4500, 3543.55, 33593.55, 3443.55, 3295.98, 3198.41, 3050.84, 3000.84, 2702.87, 2555.18, 2514.22, 2473.26, are not shown on the above-referenced topographic work maps. Please revise the above-referenced work maps to include all modeled cross sections, or explain why this is not necessary.**

   All of the HEC-RAS sections have been added to the work map to facilitate your review.

3. **From our technical review, it appears as though the base floodplain delineation is not mapped correctly between multiple cross sections. Please provide an explanation for these discrepancies, or make the appropriate revisions.**

   We have fine-tuned the floodplain delineation through the golf course to exactly match the base flood elevations with the contours at each section (see attached Workmap).

500 Amigo Court, Suite 100 | Las Vegas, NV 89119 | USA
Tel 702.736.6632 | Fax 702.736.0704 | www.louisberger.com

4. **Please submit documentation of the notification to property owners who will be affected by any widening/shifting of the base (1-percent-annual-chance) floodplain along Flamingo Wash.**

   A notification letter has been sent to the owner of the golf course property, APN 162-14-501-002 (see attached).

Thank you for your prompt review of this request for a Letter of Map Revision. If you have any additional questions, please do not hesitate to contact me.

Sincerely,

Syndi Dudley

RE: Increase in Flood Plain Area

This letter is being sent to inform you that the Clark County Regional Flood Control District, on behalf of Clark County, has submitted a flood map revision request to the Federal Emergency Management Agency (FEMA) to change the floodplain within the Flamingo Wash from Desert Inn Road to Spencer Street.

You have been identified as the owner of the property referenced above which is expected to be affected by an increase in flood plain area as a result of this map revision request. The changes result from an analysis of the flood plain based on new topographic information for the Paradise Palms golf course. As a result of this study, an overall reduction in the flood plain area will occur with some minor increases within the golf course terrain when compared with the currently published FEMA Flood Insurance Rate Maps. A map is attached showing the effective flood zone in gray shading and the proposed flood zone in a yellow line.

If you should have any questions please contact me at 455-3139.

Sincerely,

Kevin Eubanks, P.E.
Assistant General Manager
