Subject: CLOMR for the Muddy River Logandale Levee

Attention: LOMC Manager

G. C. Wallace, Inc. (GCW) has been contracted by Clark County Public Works (CCPW) to complete a Conditional Letter of Map Revision (CLOMR) for the Logandale Levee along the Muddy River within Logandale, Clark County, Nevada. The levee project encompasses the reach of the Muddy River between the Wells Siding and Waite Avenue tying into the existing upstream and downstream river. The mapping from Wells Siding to Waite Avenue is approximately 3,400 feet long. The purpose of this CLOMR is to lay the groundwork for a Letter of Map Revision (LOMR) in order to revise the existing Community Panel to reflect the proposed levee to protect downstream property and facilities and to revise the FEMA designated Zones AE and A Special Flood Hazard Areas (SFHAs). The CLOMR methodology is in accordance with *Guidelines and Specifications for Flood Hazard Mapping Partners* (Reference 1).

The current FIRM panel indicates the subject reach of the Muddy River is located within Zones AE and A SFHAs. The affected Community Panel Map Number is 32003C1105F dated November 16, 2011. See Figures 1 and 2 for the project vicinity and location. The Effective FIRM is shown on Figure 3. There have been no flood control improvements within this reach of the Muddy River since the effective FIRM was completed.

The following information supporting this request for a CLOMR is enclosed. This request is based on the proposed levee improvements consisting of reconstruction of a levee system that confines Muddy River flows from the Wells Siding to Waite Avenue. This request is also based on additional survey data dated January 11, 2011 and 2-foot aerial photography dated November 11, 2009.

- ◆ Electronic Files on disk (Aerial topography, Survey data, GIS Files, HEC-RAS Models)

Proposed Improvements

Note that all channel improvements modeling and mapping in support of this CLOMR are based on the NAVD88 Datum. See Figure 4 for the location of the proposed improvements included in the attached Section 1.0 Figures and Affected FIRM Panels.

Hydrology

Hydrologic data was referenced from the *1995 Flood Insurance Study Restudy for the Muddy River* (Reference 6, hereinafter referred to as the *1995 FIS Restudy*). According to the *1995 FIS Restudy*, the Muddy River main wash effective flow rate is 21,400 cfs during the 100-year storm event. The reference information is included in Section 5.0 Reference Material.

Aerial Topography and Survey Data

Topographic mapping with a contour interval of 2-foot was generated by AeroTech Mapping (flight date November 11, 2009). In addition, supplemental surveys of the cross sections were performed dated January 11, 2011. The vertical control is based on North American Vertical Datum of 1988 (NAVD 1988), and horizontal control is based on Nevada State Plane Coordinate System (NAD 1983/94). In addition to topographic mapping, field surveys were performed to obtain as-built information as needed.

Hydraulic Modeling

The hydraulic analyses for the project were performed to determine the limits, height, and stability of the proposed levee system. Cross sections data for the River were surveyed along the project reach from Wells Siding Diversion Structure to Waite Avenue. This survey data was supplemented with the existing 2-ft topography. As indicated in the hydrologic analysis, the 100-year design flow rate is 21,400 cfs.

The *1995 FIS Restudy* serves as the starting point for the hydraulic analysis for this project, and that study's modeling used 4-foot topographic contours and HEC-2 software. The tasks performed in this study for the existing conditions analysis included two HEC-RAS models (Section 3.0 Engineering Analysis): (1) conversion of the FEMA Effective HEC-2 model (Effective Model) to a HEC-RAS model (Duplicate Effective Model), and (2) re-analyzing and extending the Duplicate Effective Model using field surveyed cross section data performed in January 2011 for the project site (Corrected Effective Model). The areas outside the limits of the survey data are reflected by 2-foot contours that were flown and generated in November 2009.

The cross section orientation, location, reach lengths, roughness factors and other modeling parameters remain the same as the original FEMA-approved FIS Restudy model. The reference

information is included in Section 5.0 Reference Materials. The output from the HEC-RAS models is included in Section 3.0 Engineering Analysis.

Duplicate Effective Model

The original FEMA approved Effective 1995 FIS model based on 4-foot topographic contours and the HEC-2 analysis was converted using HEC-RAS. The HEC-RAS and HEC-2 results are identical. Table 1 includes a comparison of the WSE results from the Effective Model and Duplicate Effective Model. HEC-RAS Duplicate Effective Model is included in Section 3.0 Engineering Analysis.

TABLE 1				
Modeling Results Summary (Duplicate Effective)				
River Cross Section*	Q Total	W.S. Elevation		DIFF
		Effective Model (ft)	Duplicate Effective Model (ft)	Duplicate Effective - (ft)
No.	(cfs)			
Muddy River				
88	21400	1416.4	1416.4	0.0
87	21400	1409.6	1409.6	0.0
86	21400	1401.8	1401.8	0.0
85.5	21400	1401.0	1401.0	0.0
85	21400	1400.3	1400.3	0.0
84	21400	1399.5	1399.5	0.0

Corrected Effective Model

The Corrected Effective Model serves as the existing condition model for the project and was created modifying the Duplicate Effective Model. A cross section (85.5) was removed from the Duplicate Effective Model, and a few cross sections (85.4, 86.4, 87.4, 89 to 91.4) were added to correctly reflect the existing condition, better define the water surface profile, and to extend to the upstream limit of the levee. The added cross sections RS 88-91.4 and the cross section orientation, location, reach lengths, roughness factors and other modeling parameters for these cross sections are referenced from the *Flood Hazard Mapping Study Muddy River Levee* (Reference 7). The reference information is included in Section 5.0 Reference Information. The surveyed cross section data supplemented with 2-foot topography was used in the Corrected Effective Model.

Table 2, shown below, includes a comparison of the WSE from the Corrected Effective Model and Duplicate Effective. Hydraulic models are included in Section 3.0 Engineering Analysis.

TABLE 2				
Modeling Results Summary (Corrected Effective)				
River Cross Section*	Q Total	W.S. Elevation		DIFF
No.	(cfs)	Duplicate Effective Model (ft)	Corrected Effective Model (ft)	Corrected Effective - Duplicate (ft)
Muddy River				
91.4	21400	N/A	1428.7	N/A
91	21400	N/A	1428.3	N/A
90.5	21400	N/A	1428.2	N/A
90	21400	N/A	1425.6	N/A
89.5	21400	N/A	1424.1	N/A
89	21400	N/A	1423.3	N/A
88	21400	1416.4	1415.7	-0.7
87.4	21400	N/A	1411.6	N/A
87	21400	1409.6	1411.0	1.4
86.4	21400	N/A	1408.0	N/A
86	21400	1401.8	1402.7	0.9
85.5	21400	1401.0	N/A	N/A
85.4	21400	N/A	1401.5	N/A
85	21400	1400.3	1400.2	-0.1
84	21400	1399.5	1399.5	0.0

A comparison of typical cross sections between the Duplicate and Corrected Effective Models shows that the Corrected Effective Model with current available data has a generally higher bed elevation.

Post Project Model

The review of the results from the Corrected Effective Model showed that levee conditions exist in the reach of the Muddy River from the Wells Siding Diversion Structure (River Station 91.4) to near the Waite Avenue Alignment (River Station 85.4). The existing WSE in the Muddy River main channel is higher than the existing ground on the backside or landside of the levee bank. The levee improvements are proposed where this condition occurs. Note that there are additional improvements proposed outside of the defined levee area for adjacent property owners and Clark County's convenience, for instance the access turnaround at the north end of the project, the extension of the access road to Waite Avenue, and the concrete slope paving along the railroad on the west side of the river. Please limit your review and comments accordingly.

Based on the results presented in the subsequent sections, levee improvements are recommended. These proposed improvements were incorporated into the Corrected Effective Model in order to develop the Post Project Model. A few cross sections were added to the Post Project Model to correctly reflect the proposed condition and better define the water surface profile. The results from this model show a decrease of WSE (compared to Corrected Effective Model Results) in the range of 0.0 to 2.7 ft. and an increase of 0.2 ft at one location. Table 3, shown below, compares the WSE from the Post Project Model and Corrected Effective Model. Hydraulic models are included in Section 3.0 Engineering Analysis.

* See Figure 4

Manning's "n" Values and Losses

Manning's "n" roughness values, expansion and contraction coefficients for the Muddy River cross sections and transitions have been utilized in the model according to and consistent with the 1995 Muddy River FIS Restudy and the *HEC-RAS River Analysis System Hydraulic Reference Manual* (Reference 5, hereinafter referred to as the HEC-RAS Manual). The HEC-RAS Manual has been included in the attached Section 5.0 Reference Material showing coefficients for gradual transitions. Contraction and expansion coefficients at all of the cross sections assume values of 0.1 and 0.3, respectively, for gradual transitions under subcritical flow conditions.

Boundary Condition and Floodplain Tie-in Locations

Downstream: The floodplain tie-in location is approximately 3,200 feet downstream of the Wells Siding Diversion Structure. This is at Cross Section 84 which matches the 1995 Muddy River FIS Restudy cross section geometry and water surface elevation.

Upstream: The floodplain tie-in location is at the downstream end of the existing Wells Siding Diversion Structure. This is near Cross Section 91.4. This cross section is an added detailed section and does not match the approximate Zone A floodplain delineation. Since the analysis that generated the effective Zone A floodplain is not available, this location was selected because it is at the upstream end of the proposed "levee condition" improvements, downstream of the Wells Siding Diversion Structure, and allows a reasonable graphically tie-in to the approximate Zone A delineation generally following contours. The "levee condition" is defined by areas of the embankment that the water surface elevation is above the land side toe of the

embankment. The Corrected Effective Model results indicate that the flow regime is subcritical. The 100-year water surface elevation is 1428.7.

The Post Project Model results indicate that the flow regime is still subcritical. The 100-year water surface elevation is 1.8 feet lower at 1426.9 due to the downstream improvements.

Mapping

The 100-year floodplain, floodway, and base flood elevations (BFE) are based on HEC-RAS modeling for subcritical flow. The floodplain and BFE were delineated on topographic maps based on the proposed improvements. The top widths calculated in the HEC-RAS model will be contained within the proposed levee from Wells Siding to Waite Avenue. The area protected by the proposed levee on the landside previously delineated as Zone A will be revised to Shaded Zone X.

The Proposed FIRM revisions are shown on Figure 5 and the Annotated FIRM is shown on Figure 6.

GCW trusts that this submittal will provide the required information needed to support a CLOMR for the subject project.

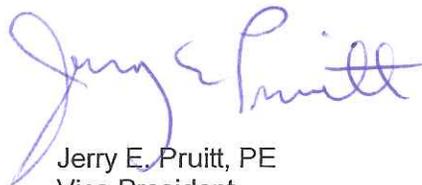

If you have any questions or require additional information, please do not hesitate to call us at (702) 804-2000.

2. FEMA FORMS

MT-2 Form 1: Overview & Concurrence Form
MT-2 Form 2: Riverine Hydrology & Hydraulics Form
MT-2 Form 3: Riverine Structures Form
Payment Information Form

U.S. DEPARTMENT OF HOMELAND SECURITY
 FEDERAL EMERGENCY MANAGEMENT AGENCY
OVERVIEW & CONCURRENCE FORM

*O.M.B No. 1660-0016
 Expires February 28, 2014*

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington, VA 20958-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

A. REQUESTED RESPONSE FROM DHS-FEMA

This request is for a (check one):

CLOMR: A letter from DHS-FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision, or proposed hydrology changes (See 44 CFR Ch. 1, Parts 60, 65 & 72).

LOMR: A letter from DHS-FEMA officially revising the current NFIP map to show the changes to floodplains, regulatory floodway or flood elevations. (See 44 CFR Ch. 1, Parts 60, 65 & 72)

B. OVERVIEW

1. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	State	Map No.	Panel No.	Effective Date
Example: 480301	City of Katy	TX	48473C	0005D	02/08/83
480287	Harris County	TX	48201C	0220G	09/28/90
320003	Clark County	NV	32003C	1105F	11/16/11

2. a. Flooding Source: Muddy River

b. Types of Flooding: Riverine Coastal Shallow Flooding (e.g., Zones AO and AH)
 Alluvial fan Lakes Other (Attach Description)

3. Project Name/Identifier: Muddy River Logandale Levee

4. FEMA zone designations affected: A (choices: A, AH, AO, A1-A30, A99, AE, AR, V, V1-V30, VE, B, C, D, X)

5. Basis for Request and Type of Revision:

a. The basis for this revision request is (check all that apply)

Physical Change Improved Methodology/Data Regulatory Floodway Revision Base Map Changes
 Coastal Analysis Hydraulic Analysis Hydrologic Analysis Corrections
 Weir-Dam Changes Levee Certification Alluvial Fan Analysis Natural Changes
 New Topographic Data Other (Attach Description)

Note: A photograph and narrative description of the area of concern is not required, but is very helpful during review.

b. The area of revision encompasses the following structures (check all that apply)

Structures: Channelization Levee/Floodwall Bridge/Culvert
 Dam Fill Other (Attach Description)

6. Documentation of ESA compliance is submitted (required to initiate CLOMR review). Please refer to the instructions for more information.

C. REVIEW FEE

Has the review fee for the appropriate request category been included? Yes Fee amount: \$6,050
 No, Attach Explanation

Please see the DHS-FEMA Web site at http://www.fema.gov/plan/prevent/fhm/frm_fees.shtm for Fee Amounts and Exemptions.

D. SIGNATURE

All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Name: John Catanese	Company: Clark County Public Works Department	
Mailing Address: 500 S. Grand Central Pkwy Las Vegas, NV 89155-4000	Daytime Telephone No.: (702)455-6050	Fax No.: (702)455-6113
	E-Mail Address: catanese@clarkcountynv.gov	

Signature of Requester (required): _____ Date: _____

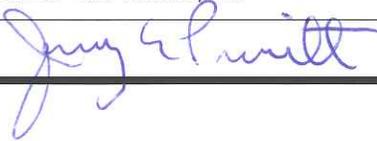

As the community official responsible for floodplain management, I hereby acknowledge that we have received and reviewed this Letter of Map Revision (LOMR) or conditional LOMR request. Based upon the community's review, we find the completed or proposed project meets or is designed to meet all of the community floodplain management requirements, including the requirements for when fill is placed in the regulatory floodway, and that all necessary Federal, State, and local permits have been, or in the case of a conditional LOMR, will be obtained. For Conditional LOMR requests, the applicant has documented Endangered Species Act (ESA) compliance to FEMA prior to FEMA's review of the Conditional LOMR application. For LOMR requests, I acknowledge that compliance with Sections 9 and 10 of the ESA has been achieved independently of FEMA's process. For actions authorized, funded, or being carried out by Federal or State agencies, documentation from the agency showing its compliance with Section 7(a)(2) of the ESA will be submitted. In addition, we have determined that the land and any existing or proposed structures to be removed from the SFHA are or will be reasonably safe from flooding as defined in 44CFR 65.2(c), and that we have available upon request by FEMA, all analyses and documentation used to make this determination.

Community Official's Name and Title: John Catanese, Associate Engineer	Community Name: Clark County	
Mailing Address: 500 S. Grand Central Pkwy Las Vegas, NV 89155-4000	Daytime Telephone No.: (702)455-6050	Fax No.: (702)455-6113
	E-Mail Address: catanese@clarkcountynv.gov	

Community Official's Signature (required): _____ Date: _____

CERTIFICATION BY REGISTERED PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR

This certification is to be signed and sealed by a licensed land surveyor, registered professional engineer, or architect authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.2(b) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

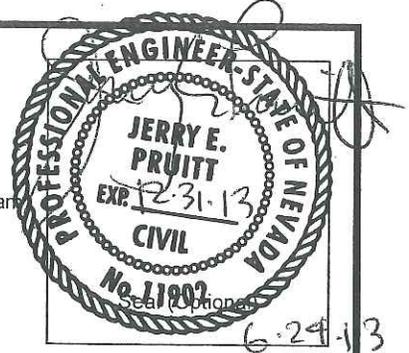

Certifier's Name: Jerry E. Pruitt, PE	License No.: 11902	Expiration Date: 12/31/13
Company Name: G.C. Wallace, Inc.	Telephone No.: (702)804-2011	Fax No.: (702)804-2299
Signature: 	Date: 6-24-13	E-Mail Address: jpruitt@gcwallace.com

Ensure the forms that are appropriate to your revision request are included in your submittal.

*O.M.B No. 1660-0016
 Expires February 28, 2014*

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington VA 20958-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a NFIP Flood Insurance Rate Maps (FIRM).

Flooding Source: Muddy River

Note: Fill out one form for each flooding source studied

A. HYDROLOGY

1. Reason for New Hydrologic Analysis (check all that apply)

- | | | |
|---|--|--|
| <input checked="" type="checkbox"/> Not revised (skip to section B) | <input type="checkbox"/> No existing analysis | <input type="checkbox"/> Improved data |
| <input type="checkbox"/> Alternative methodology | <input type="checkbox"/> Proposed Conditions (CLOMR) | <input type="checkbox"/> Changed physical condition of watershed |

2. Comparison of Representative 1%-Annual-Chance Discharges

Location	Drainage Area (Sq. Mi.)	Effective/FIS (cfs)	Revised (cfs)
----------	-------------------------	---------------------	---------------

3. Methodology for New Hydrologic Analysis (check all that apply)

- | | |
|---|--|
| <input type="checkbox"/> Statistical Analysis of Gage Records | <input type="checkbox"/> Precipitation/Runoff Model → Specify Model: _____ |
| <input type="checkbox"/> Regional Regression Equations | <input type="checkbox"/> Other (please attach description) |

Please enclose all relevant models in digital format, maps, computations (including computation of parameters), and documentation to support the new analysis.

4. Review/Approval of Analysis

If your community requires a regional, state, or federal agency to review the hydrologic analysis, please attach evidence of approval/review.

5. Impacts of Sediment Transport on Hydrology

Is the hydrology for the revised flooding source(s) affected by sediment transport? Yes No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation..

B. HYDRAULICS

1. Reach to be Revised

	Description	Cross Section	Water-Surface Elevations (ft.)	
			Effective	Proposed/Revised
Downstream Limit*	<u>39,825' above Fish & Game Diversion Structure</u>	<u>84 (AX)</u>	<u>1399.5</u>	<u>1399.5</u>
Upstream Limit*	<u>Wells Siding. 43,175' above Fish & Game</u>	<u>91.4</u>	<u>1428.7</u>	<u>1426.9</u>

*Proposed/Revised elevations must tie-into the Effective elevations within 0.5 foot at the downstream and upstream limits of revision.

2. Hydraulic Method/Model Used: HEC-RAS

3. Pre-Submittal Review of Hydraulic Models*

DHS-FEMA has developed two review programs, CHECK-2 and CHECK-RAS, to aid in the review of HEC-2 and HEC-RAS hydraulic models, respectively. We recommend that you review your HEC-2 and HEC-RAS models with CHECK-2 and CHECK-RAS.

4.

<u>Models Submitted</u>	<u>Natural Run</u>		<u>Floodway Run</u>		<u>Datum</u>
Duplicate Effective Model*	File Name: MRLEVEEDUP.PRJ	Plan Name: MRLEVEEDUP.GO1	File Name: N/A	Plan Name: N/A	NAVD88
Corrected Effective Model*	File Name: MRLEVEECOR.PRJ	Plan Name: MRLEVEECOR.G09	File Name: N/A	Plan Name: N/A	NAVD88
Existing or Pre-Project Conditions Model	File Name: N/A	Plan Name: N/A	File Name: N/A	Plan Name: N/A	N/A
Revised or Post-Project Conditions Model	File Name: MRLEVEEPRO.PRJ	Plan Name: MRLEVEEPRO.G01	File Name: MRLEVEEPRO.PRJ	Plan Name: MRLEVEEPRO.G01	NAVD88
Other - (attach description)	File Name: N/A	Plan Name: N/A	File Name: N/A	Plan Name: N/A	N/A

* For details, refer to the corresponding section of the instructions.

Digital Models Submitted? (Required)

C. MAPPING REQUIREMENTS

A certified topographic work map must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions); location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

Digital Mapping (GIS/CADD) Data Submitted (preferred)

Topographic Information: Topography/Survey

Source: AeroTech Mapping/GC Wallace Survey

Date: November 22, 2009/January 18, 2011

Accuracy: See MT-2 Form attached.

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach a copy of the effective FIRM and/or FBFM, at the same scale as the original, annotated to show the boundaries of the revised 1%-and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%-and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area on revision.

Annotated FIRM and/or FBFM (Required)

D. COMMON REGULATORY REQUIREMENTS*

1. For LOMR/CLOMR requests, do Base Flood Elevations (BFEs) increase? Yes No
- a. For CLOMR requests, if either of the following is true, please submit evidence of compliance with Section 65.12 of the NFIP regulations:
- The proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot compared to pre-project conditions.
 - The proposed project encroaches upon a SFHA with or without BFEs established and would result in increases above 1.00 foot compared to pre-project conditions.
- b. Does this LOMR request cause increase in the BFE and/or SFHA compared with the effective BFEs and/or SFHA? Yes No
If Yes, please attach **proof of property owner notification and acceptance (if available)**. Elements of and examples of property owner notifications can be found in the MT-2 Form 2 Instructions.
2. Does the request involve the placement or proposed placement of fill? Yes No
- If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, to include any structures or proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from flooding in accordance with the NFIP regulations set forth at 44 CFR 60.3(A)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for more information.
3. For LOMR requests, is the regulatory floodway being revised? Yes No
- If Yes, attach **evidence of regulatory floodway revision notification**. As per Paragraph 65.7(b)(1) of the NFIP Regulations, notification is required for requests involving revisions to the regulatory floodway. (Not required for revisions to approximate 1%-annual-chance floodplains [studied Zone A designation] unless a regulatory floodway is being established. Elements and examples of regulatory floodway revision notification can be found in the MT-2 Form 2 Instructions.)
4. For CLOMR requests, please submit documentation to FEMA and the community to show that you have complied with Sections 9 and 10 of the Endangered Species Act (ESA).

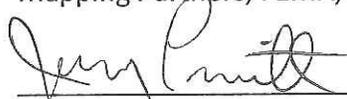

For actions authorized, funded, or being carried out by Federal or State agencies, please submit documentation from the agency showing its compliance with Section 7(a)(2) of the ESA. Please see the MT-2 instructions for more detail.

* Not inclusive of all applicable regulatory requirements. For details, see 44 CFR parts 60 and 65.

MT-2 FORM 2 ATTACHMENT

MT-2 Form 2

- C. This is to certify that all work accomplished in the conduct of this CLOMR was done in accordance with the Statement of Work and General Provisions of Contract 500.887, and all amendments thereto, together with all such modifications, either written or oral, as the Regional PO and/or the Contracting Officer or their representatives have directed, such as modifications affecting this contract, and that all such work has been accomplished in accordance with sound and accepted engineering practices within the contract provisions for respective phases of work. Topographic data on work maps and exhibits is certified to represent existing conditions and to be accurate to the best of my knowledge as per Volume 2, Section 2.1.5 Guidelines and Specifications for Flood Hazard Mapping Partners, FEMA, April 2003.

Jerry Pruitt, PE – Vice President
G. C. WALLACE, INC.

- C. Accuracy – Topography: Aero Tech Mapping, November 22, 2009, Map Accuracy: To conform to ASPRS (Class 1) for 2 foot Contours. RMSE on Contours 0.67'; RMSE Spot Elevations: 0.33' RMSE on Planimetrics 2.0'.

- C. Accuracy – Survey: G.C. Wallace Survey, January 2011, Per NAC 625.775, National Map Accuracy Standards as it existed on November 14, 1997. Horizontal Accuracy: Not more than 10 percent of the points tested shall be in error by more than 1/50", measured on the publication scale. These limits of accuracy shall apply in all cases to positions of well-defined points only, being easily visible or recoverable on the ground. Vertical Accuracy: Not more than 10 percent of the elevations tested shall be in error more than one-half the contour interval.

- D. #1 – Yes, but only at one location and only 0.2 foot. The increase is due to a transition and the required freeboard is met and there are no adverse impacts to adjacent properties or facilities.

- D. #4 – Clark County has obtained the Section 10 Incidental Take Permit from U.S. Fish and Wildlife for all land disturbance conducted by local government on non-Federal land. The attached Incidental Take Permit is the demonstration of Endangered Species Act (ESA) compliance as the Incidental Take Permit issued by U.S. Fish and Wildlife indicated "non-Federal lands in Clark County Nevada, for cities and Clark County". The proposed flood control project is one of the "Covered Activities". Permits for construction within the Flood Zone will not be allowed until receipt of the CLOMR from FEMA. Supporting information has been included with this document in the attached Supporting Documentation 4.4.

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 7 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless a valid OMB control number appears in the upper right corner of this form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 1800 South Bell Street, Arlington, VA 20598-3005, Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.

PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).

ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program; Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.

DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a NFIP Flood Insurance Rate Maps (FIRM).

Flooding Source: Muddy River

Note: Fill out one form for each flooding source studied.

A. GENERAL

Complete the appropriate section(s) for each Structure listed below:

- Channelization.....complete Section B
- Bridge/Culvert.....complete Section C
- Dam.....complete Section D
- Levee/Floodwall.....complete Section E
- Sediment Transport.....complete Section F (if required)

Description Of Modeled Structure

1. Name of Structure: Logandale Levee
Type (check one): Channelization Bridge/Culvert Levee/Floodwall Dam
Location of Structure: 40,350' above the Fish and Game Diversion Structure
Downstream Limit/Cross Section: 85.4
Upstream Limit/Cross Section: 91.4
2. Name of Structure: _____
Type (check one): Channelization Bridge/Culvert Levee/Floodwall Dam
Location of Structure: _____
Downstream Limit/Cross Section: _____
Upstream Limit/Cross Section: _____
3. Name of Structure: _____
Type (check one) Channelization Bridge/Culvert Levee/Floodwall Dam
Location of Structure: _____
Downstream Limit/Cross Section: _____
Upstream Limit/Cross Section: _____

NOTE: FOR MORE STRUCTURES, ATTACH ADDITIONAL PAGES AS NEEDED.

B. CHANNELIZATION

Flooding Source: Muddy River

Name of Structure: Logandale Levee

1. Hydraulic Considerations

The channel was designed to carry 21,400 (cfs) and/or the 100-year flood.

The design elevation in the channel is based on (check one):

- Subcritical flow
- Critical flow
- Supercritical flow
- Energy grade line

If there is the potential for a hydraulic jump at the following locations, check all that apply and attach an explanation of how the hydraulic jump is controlled without affecting the stability of the channel.

- Inlet to channel
- Outlet of channel
- At Drop Structures
- At Transitions
- Other locations (specify): _____

2. Channel Design Plans

Attach the plans of the channelization certified by a registered professional engineer, as described in the instructions.

3. Accessory Structures

The channelization includes (check one):

- Levees [Attach Section E (Levee/Floodwall)]
- Drop structures
- Superelevated sections
- Transitions in cross sectional geometry
- Debris basin/detention basin [Attach Section D (Dam/Basin)]
- Energy dissipator
- Weir
- Other (Describe): _____

4. Sediment Transport Considerations

Are the hydraulics of the channel affected by sediment transport? Yes No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation for why sediment transport was not considered.

C. BRIDGE/CULVERT

Flooding Source: _____

Name of Structure: _____

1. This revision reflects (check one):

- Bridge/culvert not modeled in the FIS
- Modified bridge/culvert previously modeled in the FIS
- Revised analysis of bridge/culvert previously modeled in the FIS

2. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8): _____

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structures. Attach justification.

3. Attach plans of the structures certified by a registered professional engineer. The plan detail and information should include the following (check the information that has been provided):

- Dimensions (height, width, span, radius, length)
- Distances Between Cross Sections
- Shape (culverts only)
- Erosion Protection
- Material
- Low Chord Elevations – Upstream and Downstream
- Beveling or Rounding
- Top of Road Elevations – Upstream and Downstream
- Wing Wall Angle
- Structure Invert Elevations – Upstream and Downstream
- Skew Angle
- Stream Invert Elevations – Upstream and Downstream
- Cross-Section Locations

4. Sediment Transport Considerations

Are the hydraulics of the structure affected by sediment transport? Yes No

If Yes, then fill out Section F (Sediment Transport) of Form 3. If no, then attach an explanation.

D. DAM/BASIN

Flooding Source: _____
 Name of Structure: _____

1. This request is for (check one): Existing dam/basin New dam/basin Modification of existing dam/basin
2. The dam/basin was designed by (check one): Federal agency State agency Private organization Local government agency

Name of the agency or organization: _____

3. The Dam was permitted as (check one): Federal Dam State Dam

Provide the permit or identification number (ID) for the dam and the appropriate permitting agency or organization

Permit or ID number _____ Permitting Agency or Organization _____

- a. Local Government Dam Private Dam

Provided related drawings, specification and supporting design information.

4. Does the project involve revised hydrology? Yes No

If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2).

Was the dam/basin designed using critical duration storm? (must account for the maximum volume of runoff)

- Yes, provide supporting documentation with your completed Form 2.
 No, provide a written explanation and justification for not using the critical duration storm.

5. Does the submittal include debris/sediment yield analysis? Yes No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why debris/sediment analysis was not considered?

6. Does the Base Flood Elevation behind the dam/basin or downstream of the dam/basin change? Yes No

If Yes, complete the Riverine Hydrology & Hydraulics Form (Form 2) and complete the table below.

FREQUENCY (% annual chance)	Stillwater Elevation Behind the Dam/Basin	
	FIS	REVISED
10-year (10%)	_____	_____
50-year (2%)	_____	_____
100-year (1%)	_____	_____
500-year (0.2%)	_____	_____
Normal Pool Elevation	_____	_____

7. Please attach a copy of the formal Operation and Maintenance Plan

E. LEVEE/FLOODWALL

1. System Elements

a. This Levee/Floodwall analysis is based on (check one):

- upgrading of an existing levee/floodwall system a newly constructed levee/floodwall system reanalysis of an existing levee/floodwall system

b. Levee elements and locations are (check one):

- earthen embankment, dike, berm, etc. Station 14+50 to 41+00
 structural floodwall Station _____ to _____
 Other (describe): _____ Station _____ to _____

c. Structural Type (check one): monolithic cast-in place reinforced concrete reinforced concrete masonry block sheet piling
 Other (describe): _____

d. Has this levee/floodwall system been certified by a Federal agency to provide protection from the base flood?

Yes No

If Yes, by which agency? _____

e. Attach certified drawings containing the following information (indicate drawing sheet numbers):

- | | |
|--|--|
| 1. Plan of the levee embankment and floodwall structures. | Sheet Numbers: <u>C1 thru C4</u> |
| 2. A profile of the levee/floodwall system showing the Base Flood Elevation (BFE), levee and/or wall crest and foundation, and closure locations for the total levee system. | Sheet Numbers: <u>C6 thru C9</u> |
| 3. A profile of the BFE, closure opening outlet and inlet invert elevations, type and size of opening, and kind of closure. | Sheet Numbers: <u>C7, S1</u> |
| 4. A layout detail for the embankment protection measures. | Sheet Numbers: <u>C1 thru C4</u> |
| 5. Location, layout, and size and shape of the levee embankment features, foundation treatment, Floodwall structure, closure structures, and pump stations. | Sheet Numbers: <u>C11 thru C13, S2</u> |

2. Freeboard

a. The minimum freeboard provided above the BFE is:

Riverine

- | | | |
|--|---|-----------------------------|
| 3.0 feet or more at the downstream end and throughout | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |
| 3.5 feet or more at the upstream end | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |
| 4.0 feet within 100 feet upstream of all structures and/or constrictions | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |

Coastal

- | | | |
|---|------------------------------|-----------------------------|
| 1.0 foot above the height of the one percent wave associated with the 1%-annual-chance stillwater surge elevation or maximum wave runup (whichever is greater). | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 2.0 feet above the 1%-annual-chance stillwater surge elevation | <input type="checkbox"/> Yes | <input type="checkbox"/> No |

Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Paragraph 65.10(b)(1)(ii) of the NFIP Regulations.

If No is answered to any of the above, please attach an explanation.

b. Is there an indication from historical records that ice-jamming can affect the BFE? Yes No

If Yes, provide ice-jam analysis profile and evidence that the minimum freeboard discussed above still exists.

3. Closures

a. Openings through the levee system (check one): exists does not exist

If opening exists, list all closures:

Channel Station	Left or Right Bank	Opening Type	Highest Elevation for Opening Invert	Type of Closure Device
27+25	Left	18" IRR	1406.1	Flap Gate

(Extend table on an added sheet as needed and reference)

Note: Geotechnical and geologic data

In addition to the required detailed analysis reports, data obtained during field and laboratory investigations and used in the design analysis for the following system features should be submitted in a tabulated summary form. (Reference U.S. Army Corps of Engineers [USACE] EM-1110-2-1906 Form 2086.)

4. Embankment Protection

- a. The maximum levee slope land side is: 2.5:1
- b. The maximum levee slope flood side is: 1.5:1
- c. The range of velocities along the levee during the base flood is: 8 (min.) to 18 (max.)
- d. Embankment material is protected by (describe what kind): Reinforced Concrete Lining and Heavy Riprap
- e. Riprap Design Parameters (check one): Velocity Tractive stress
 Attach references

Reach	Sideslope	Flow Depth	Velocity	Curve or Straight	Stone Riprap			Depth of Toedown
					D ₁₀₀	D ₅₀	Thickness	
Sta 25+00 to 25+50	2:1	16.5	17.7	Straig		24"	48"	48"
Sta to								
Sta to								
Sta to								
Sta to								
Sta to								

(Extend table on an added sheet as needed and reference each entry)

- f. Is a bedding/filter analysis and design attached? Yes No
- g. Describe the analysis used for other kinds of protection used (include copies of the design analysis):
Standard Reinforced Concrete Lining.

Attach engineering analysis to support construction plans.

5. Embankment And Foundation Stability

- a. Identify locations and describe the basis for selection of critical location for analysis:
See section 5.3.2 and Table 5-3 in Section 5.2 of the geotechnical report.
 - Overall height: Sta.: 18+00, height 10.1 ft.
 - Limiting foundation soil strength:
 Strength $\phi = 30$ degrees, $c = 100$ psf
 Slope: SS = 2 (h) to 1 (v)
 (Repeat as needed on an added sheet for additional locations)
- b. Specify the embankment stability analysis methodology used (e.g., circular arc, sliding block, infinite slope, etc.):
Spencer's Method
- c. Summary of stability analysis results: Stability analysis described in Section 5.3 with results presented in 5.3.4.

E. LEVEE/FLOODWALL (CONTINUED)

5. Embankment And Foundation Stability (continued)

Case	Loading Conditions	Critical Safety Factor	Criteria (Min.)
I	End of construction	Sta18+00 = 1.6 Sta23+00 =1.5	1.3
II	Sudden drawdown	Sta18+00 = 1.2 Sta23+00 =1.1	1.0
III	Critical flood stage		1.4
IV	Steady seepage at flood stage	Sta18+00 = 2.0 Sta23+00 =1.9	1.4
VI	Earthquake (Case I)	Sta18+00 = 1.3 Sta23+00 =1.2	1.0

(Reference: USACE EM-1110-2-1913 Table 6-1)

d. Was a seepage analysis for the embankment performed? Yes No

If Yes, describe methodology used: Finite Element Modeling. Steady State w/ 100-yr WSE. See Section 5.3.

e. Was a seepage analysis for the foundation performed? Yes No

f. Were uplift pressures at the embankment landside toe checked? Yes No

g. Were seepage exit gradients checked for piping potential? Yes No

h. The duration of the base flood hydrograph against the embankment is 20 hours.

Attach engineering analysis to support construction plans.

6. Floodwall And Foundation Stability

a. Describe analysis submittal based on Code (check one): UBC (1988) Other (specify): _____

b. Stability analysis submitted provides for: Overturning Sliding If not, explain: _____

c. Loading included in the analyses were: Lateral earth @ $P_A =$ _____ psf; $P_p =$ _____ psf

Surcharge-Slope @ _____, surface _____ psf

Wind @ $P_w =$ _____ psf

Seepage (Uplift); _____ Earthquake @ $P_{eq} =$ _____ %g

1%-annual-chance significant wave height: _____ ft.

1%-annual-chance significant wave period: _____ sec.

d. Summary of Stability Analysis Results: Factors of Safety.
Itemize for each range in site layout dimension and loading condition limitation for each respective reach.

Loading Condition	Criteria (Min)		Sta	To	Sta	To
	Overturn	Sliding	Overturn	Sliding	Overturn	Sliding
Dead & Wind	1.5	1.5				
Dead & Soil	1.5	1.5				
Dead, Soil, Flood, & Impact	1.5	1.5				
Dead, Soil, & Seismic	1.3	1.3				

(Ref: FEMA 114 Sept 1986; USACE EM 1110-2-2502)
Note: (Extend table on an added sheet as needed and reference)

E. LEVEE/FLOODWALL (CONTINUED)

6. Floodwall And Foundation Stability (continued)

e. Foundation bearing strength for each soil type:

Bearing Pressure	Sustained Load (psf)	Short Term Load (psf)
Computed design maximum		
Maximum allowable		

f. Foundation scour protection is, is not provided. If provided, attach explanation and supporting documentation:

Attach engineering analysis to support construction plans.

7. Settlement

a. Has anticipated potential settlement been determined and incorporated into the specified construction elevations to maintain the established freeboard margin? Yes No

b. The computed range of settlement is N/A ft. to ____ ft.

c. Settlement of the levee crest is determined to be primarily from : Foundation consolidation Embankment compression
 Other (Describe): see attach

d. Differential settlement of floodwalls has has not been accommodated in the structural design and construction.

Attach engineering analysis to support construction plans.

8. Interior Drainage

a. Specify size of each interior watershed:

Draining to pressure conduit: ____ acres

Draining to ponding area: ____ acres

b. Relationships Established

Ponding elevation vs. storage Yes No

Ponding elevation vs. gravity flow Yes No

Differential head vs. gravity flow Yes No

c. The river flow duration curve is enclosed: Yes No

d. Specify the discharge capacity of the head pressure conduit: ____ cfs

e. Which flooding conditions were analyzed?

- Gravity flow (Interior Watershed) Yes No
- Common storm (River Watershed) Yes No
- Historical ponding probability Yes No
- Coastal wave overtopping Yes No

If No for any of the above, attach explanation.

e. Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection. Yes No If No, attach explanation.

g. The rate of seepage through the levee system for the base flood is ____ cfs

h. The length of levee system used to drive this seepage rate in item g: ____ ft.

E. LEVEE/FLOODWALL (CONTINUED)

8. Interior Drainage (continued)

i. Will pumping plants be used for interior drainage? Yes No

If Yes, include the number of pumping plants: ____ For each pumping plant, list:

	Plant #1	Plant #2
The number of pumps		
The ponding storage capacity		
The maximum pumping rate		
The maximum pumping head		
The pumping starting elevation		
The pumping stopping elevation		
Is the discharge facility protected?		
Is there a flood warning plan?		
How much time is available between warning and flooding?		

Will the operation be automatic? Yes No

If the pumps are electric, are there backup power sources? Yes No

(Reference: USACE EM-1110-2-3101, 3102, 3103, 3104, and 3105)

Include a copy of supporting documentation of data and analysis. Provide a map showing the flooded area and maximum ponding elevations for all interior watersheds that result in flooding.

9. Other Design Criteria

a. The following items have been addressed as stated:

Liquefaction is is not a problem

Hydrocompaction is is not a problem

Heave differential movement due to soils of high shrink/swell is is not a problem

b. For each of these problems, state the basic facts and corrective action taken:

N/A

Attach supporting documentation

c. If the levee/floodwall is new or enlarged, will the structure adversely impact flood levels and/or flow velocities floodside of the structure?

Yes No Attach supporting documentation

d. Sediment Transport Considerations:

Was sediment transport considered? Yes No

If Yes, then fill out Section F (Sediment Transport). If No, then attach your explanation for why sediment transport was not considered.

10. Operational Plan And Criteria

a. Are the planned/installed works in full compliance with Part 65.10 of the NFIP Regulations? Yes No

b. Does the operation plan incorporate all the provisions for closure devices as required in Paragraph 65.10(c)(1) of the NFIP regulations?

Yes No

c. Does the operation plan incorporate all the provisions for interior drainage as required in Paragraph 65.10(c)(2) of the NFIP regulations?

Yes No If the answer is No to any of the above, please attach supporting documentation.

E. LEVEE/FLOODWALL (CONTINUED)

11. Maintenance Plan

Please attach a copy of the formal maintenance plan for the levee/floodwall

12. Operations and Maintenance Plan

Please attach a copy of the formal Operations and Maintenance Plan for the levee/floodwall.

CERTIFICATION OF THE LEVEE DOCUMENTATION

This certification is to be signed and sealed by a licensed registered professional engineer authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.10(e) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: _____ License No.: _____ Expiration Date: _____

Company Name: _____ Telephone No.: _____ Fax No.: _____

Signature: _____ Date: _____ E-Mail Address: _____

F. SEDIMENT TRANSPORT

Flooding Source: _____

Name of Structure: _____

If there is any indication from historical records that sediment transport (including scour and deposition) can affect the Base Flood Elevation (BFE); and/or based on the stream morphology, vegetative cover, development of the watershed and bank conditions, there is a potential for debris and sediment transport (including scour and deposition) to affect the BFEs, then provide the following information along with the supporting documentation:

Sediment load associated with the base flood discharge: Volume _____ acre-feet

Debris load associated with the base flood discharge: Volume _____ acre-feet

Sediment transport rate _____ (percent concentration by volume)

Method used to estimate sediment transport: _____

Most sediment transport formulas are intended for a range of hydraulic conditions and sediment sizes; attach a detailed explanation for using the selected method.

Method used to estimate scour and/or deposition: _____

Method used to revise hydraulic or hydrologic analysis (model) to account for sediment transport: _____

Please note that bulked flows are used to evaluate the performance of a structure during the base flood; however, FEMA does not map BFEs based on bulked flows.

If a sediment analysis has not been performed, an explanation as to why sediment transport (including scour and deposition) will not affect the BFEs or structures must be provided.

MT-2 FORM 3 ATTACHMENT

MT-2 Form 3

- B. #1 – Hydraulic jump is controlled by reinforced concrete lining of the slope and providing 10.9-feet of freeboard on the levee.
- B. #4 – There is no opportunity for significant sediment to build up along the proposed system, therefore sedimentation was not considered for design.
- E. #4g – Reinforced concrete slope protection
- E. #6 – Not applicable.
- E. #8 – Not applicable.
- E. #9d – There is no opportunity for significant sediment to build up along the proposed system, therefore sedimentation was not considered for design.

- E. #7c – The existing levee has been in place for approximately 100 years. The proposed levee height is approximately the same as the existing; therefore, load related settlement within the clay foundation soils is expected to already have occurred. Any rebound settlement resulting from levee removal and replacement is expected to be elastic and completed during construction.

 Flow File: *mrleveedup.f01*
 Report Date: *6/21/2013*

Message ID	Message	Cross sections affected	Comments
MP SW 01DK	<p>The name of the stream is (\$streamname\$). The flow regime is subcritical or mixed flow. Starting water-surface elevations are computed from Known WSELs as the downstream boundary condition. Provide backup information on Known water-surface elevations or use same energy slope for all the profiles as the starting boundary condition and rerun the plan.</p>		<p>Per effective model. Backup information on starting WSE included.</p>
NT RC 05	<p>The left overbank n-value of \$nlob\$ and the right overbank n-value of \$nrob\$ are less than or equal to the channel n-value of \$nch\$. Follow the procedure in (FHWA, 1984) to compute the n-value for the natural floodplain and the channel. Or follow the procedure in (USGS, 1977) to compute the n-value for urban development. Please submit supporting information on the evaluation of n-values.</p>	84; 85; 85.5; 86; 87	<p>n values per 1995 FIS Restudy Muddy River. Backup information included.</p>
XS DC 02	<p>Constant discharge used for the entire profile for \$assignedname\$ flood. At least two discharges should be selected; one at the mouth and the other at the middle of the watershed or above the confluence of a tributary. Or provide explanation why only one discharge should be used. Other flood frequencies should also be checked.</p>		<p>Flow unchanged from effective model.</p>
XS SW 01DK	<p>The name of the stream is \$streamname\$. The flow regime is subcritical or mixed flow. Starting WSEL is computed from Known WSEL as the downstream boundary for \$Assigned_Name\$ flood. Provide backup information on Known WSEL or use energy slope as the downstream boundary.</p>	84	<p>Per effective model. Backup information on starting WSE included.</p>

Plan Description:
 Corrected Effective Model

Plan Summary Information:

Number of:	Cross Sections =	14	Multiple Openings =	0
	Culverts =	0	Inline Structures =	0
	Bridges =	0	Lateral Structures =	0

Computational Information

Water surface calculation tolerance =	0.01
Critical depth calculation tolerance =	0.01
Maximum number of iterations =	20
Maximum difference tolerance =	0.3
Flow tolerance factor =	0.001

Computation Options

Critical depth computed at all cross sections
 Conveyance Calculation Method: Between every coordinate point (HEC2 Style)
 Friction Slope Method: Average Conveyance
 Computational Flow Regime: Subcritical Flow

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical depth

for the water surface and continued on with the calculations.

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m) between the current and previous cross section. This may indicate the

need for additional cross sections.

Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated

water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program

defaulted to critical depth.

Note: Manning's n values were composited to a single value in the main channel.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

MRLEVEE-CORRECTED EFFECTIVE Plan: Corrected Effective 6/21/2013

RIVER-1 Reach-1

cHECK-RAS Report

HEC-RAS Project: *mrleveecor.prj*
 Plan File: *mrleveecor.p09*
 Geometry File: *mrleveecor.g09*
 Flow File: *mrleveecor.f03*
 Report Date: *6/21/2013*

Message ID	Message	Cross sections affected	Comments
MP SW 01DK	The name of the stream is (\$streamname\$). The flow regime is subcritical or mixed flow. Starting water-surface elevations are computed from Known WSELs as the downstream boundary condition. Provide backup information on Known water-surface elevations or use same energy slope for all the profiles as the starting boundary condition and rerun the plan.		Per effective model. Backup information on starting WSE included.
NT RC 05	The left overbank n-value of \$nlob\$ and the right overbank n-value of \$nrob\$ are less than or equal to the channel n-value of \$nch\$. Follow the procedure in (FHWA, 1984) to compute the n-value for the natural floodplain and the channel. Or follow the procedure in (USGS, 1977) to compute the n-value for urban development. Please submit supporting information on the evaluation of n-values.	84	n values per 1995 FIS Restudy Muddy River. Backup information included.
XS DC 02	Constant discharge used for the entire profile for \$assignedname\$ flood. At least two discharges should be selected; one at the mouth and the other at the middle of the watershed or above the confluence of a tributary. Or provide explanation why only one discharge should be used. Other flood frequencies should also be checked.		Flow unchanged from effective model.
XS EC 01L	Cross section extended vertically. Flow Code will be EL. The \$assignedname\$ WSEL of \$wsel\$ is higher than the starting GR station elevation of \$grelv\$. The Left_Sta_Eff is equal to the starting GR station. If there is divided flow then cross section should be trimmed or the ineffective flow station should be used to block the divided flow. If there is no divided flow then the cross section should be expanded to cover the \$assignedname\$ floodplain. The HEC-RAS geometry file may need to be recreated using a GIS program. Or provide explanation why the cross section should not be expanded.	90.5; 91.4	The model demonstrates that existing embankment overtopping occurs.

XS LV 02L	<p>The Left levee option is used at this river station. It is the most upstream cross section on the levee.</p> <p>Freeboard is computed by subtracting the 1%-annual-chance WSEL from the levee crest elevation.</p> <p>Left Freeboard of \$lfrbrd\$ is less than 3.5 feet. A without-levee analysis needs to be conducted since the freeboard does not meet the requirements of Part 65.10 of the National Flood Insurance Program regulations (FEMA, 1986).</p> <p>Please submit all the required models for levees.</p>	89; 89.5; 90; 90.5	The model demonstrates that existing embankment overtopping occurs.
XS LV 04L	<p>The Left levee option is used at this river station. The input Left Levee Elevation of \$leveel\$ is lower than the \$assignedname\$ flood WSEL of \$wselev\$. The Left Levee Elevation should be raised above the highest flood frequency WSEL.</p>	90.5	
XS LV 05L	<p>The Left levee option is used at this river station. The \$assignednameMin\$ flood overtops the levee.</p> <p>The \$assignednameMin\$ flood WSEL of \$wselMin\$ is higher than the levee crest elevation of \$grelv\$. The input Left Levee Elevation of \$leveeelvl\$ is higher than the \$assignednameMax\$ flood WSEL of \$wselMax\$.</p> <p>The Lateral Structure option or other options should be used to determine the proper With-levee discharge and WSEL.</p>	91	
XS SW 01DK	<p>The name of the stream is \$streamname\$.</p> <p>The flow regime is subcritical or mixed flow.</p> <p>Starting WSEL is computed from Known WSEL as the downstream boundary for \$Assigned_Name\$ flood.</p> <p>Provide backup information on Known WSEL or use energy slope as the downstream boundary.</p>	84	Backup information on starting WSE included.

Plan Summary Information:

Number of:	Cross Sections =	20	Multiple Openings =	0
	Culverts =	0	Inline Structures =	0
	Bridges =	0	Lateral Structures =	0

Computational Information

Water surface calculation tolerance =	0.01
Critical depth calculation tolerance =	0.01
Maximum number of iterations =	20
Maximum difference tolerance =	0.3
Flow tolerance factor =	0.001

Computation Options

Critical depth computed at all cross sections
 Conveyance Calculation Method: At breaks in n values only
 Friction Slope Method: Average Conveyance
 Computational Flow Regime: Subcritical Flow

Encroachment Data

Equal Conveyance = True
 Left Offset = 0
 Right Offset = 0

Warning: Divided flow computed for this cross-section.

Warning: The cross-section end points had to be extended vertically for the computed water surface.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Note: Manning's n values were composited to a single value in the main channel.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m) between the current and previous cross section. This may indicate the

need for additional cross sections.

Note: Manning's n values were composited to a single value in the main channel.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy was used.

HEC-RAS Project: *mrleveepro.prj*
 Plan File: *mrleveepro.p01*
 Geometry File: *mrleveepro.g01*
 Flow File: *mrleveepro.f04*
 Report Date: *6/21/2013*

Message ID	Message	Cross sections affected	Comments
FW FW 01L	The Left encroachment station is within the channel. The Left encroachment station \$encrstal\$ is more than left channel bank station \$stalob\$. The left encroachment station should be the same as the left channel bank station.	89; 89.5; 90; 91	Floodway was set to floodplain to not allow further encroachment into the floodplain.
FW FW 03L	The left channel bank elevation of \$lobelev\$ is higher than the 1-percent-annual-chance WSEL of \$wsel\$. Relocate the left channel bank station at or below the 1-percent-annual-chance WSEL. Do not place the bank stations at the bottom of the channel. Do not place the bank stations at the low flow channel. Use the Horizontal Variation in "n" Values option in HEC-RAS to assign different "n" values to the left bank slope, low flow channel, and the right bank slope. Let HEC-RAS compute the composite "n" value based on the depth of flow.	85; 85.4; 86; 86.3; 86.4; 86.5; 87; 87.3; 87.4; 87.9; 88; 88.4; 88.5; 89; 89.5; 90; 90.5; 91; 91.4	
FW FW 03R	The right channel bank elevation of \$robelev\$ is higher than the 1-percent annual chance WSEL of \$wsel\$. Relocate the right channel bank station at or below the 1-percent annual chance WSEL. Do not place the bank stations at the bottom of the channel. Do not place the bank stations at the low flow channel. Use the Horizontal Variation in "n" Values option in HEC-RAS to assign different "n" values to the left bank slope, low flow channel, and the right bank slope. Let HEC-RAS compute the composite "n" value based on the depth of flow.	85; 85.4; 86; 86.3; 86.4; 86.5; 87; 87.3; 87.4; 87.9; 88; 88.4; 88.5; 89; 89.5; 90; 90.5; 91; 91.4	
FW FW 04L	The 1-percent-annual-chance floodplain is outside of the channel. The left station effective of \$ineffstal\$ for the 1-percent-annual-chance floodplain is less than the left channel bank station \$stalob\$. However, the left encroachment station \$encrstal\$ is outside of the 1-percent-annual-chance floodplain. Adjust the left encroachment station so that it will be within the floodplain.	84	

FW FW 04R	<p>The 1-percent-annual-chance floodplain is outside of the channel. The right station effective of $\\$ineffstar\\$ for the 1-percent-annual-chance floodplain is greater than the right channel bank station $\\$starob\\$. However, the right encroachment station $\\$encstar\\$ is outside of the 1-percent-annual-chance floodplain. Adjust the right encroachment station so that it will be within the floodplain.</p>	84	<p>Floodway was set to floodplain to not allow further encroachment into the floodplain.</p>
FW FW 05L	<p>The 1-percent annual chance flood is contained within the channel. The Left encroachment station $\\$encstal\\$ is outside the channel. The Left channel bank station is $\\$stalob\\$. Adjust the left encroachment station so that it is the same as the left channel bank station.</p>	86.4; 87.4; 90.5	
FW FW 06L	<p>The left side of the floodway boundary is within the channel. The left station effective of $\\$ineffstal\\$ for the floodway profile is more than the left channel bank station of $\\$stalob\\$. The left encroachment station of $\\$encstal\\$ is less than the left channel bank station. Adjust the left encroachment station so that it is the same as the left channel bank station.</p>	86.4; 87.4; 90.5	
FW SW 01M1	<p>The name of the stream is ($\\$streamname\\$). Encroachment Method 1 is used. Known WS option is used for both the 1%-annual-chance flood and floodway profiles. The floodway profile starting WSEL of $\\$knownwsfw\\$ is not equal to the 1%-annual-chance flood starting WSEL of $\\$knownws100yr\\$ plus the allowable surcharge value of $\\$allowsurchrg\\$. The Normal Depth option with the energy slope of the 1%-annual-chance flood should be used for both profiles and the plan should be rerun. This message may not be applicable when revising only a portion of a hydraulic model.</p>	84	
FW SW 05M1	<p>The name of the stream is ($\\$streamname\\$). Encroachment Method 1 is used. The floodway starting water-surface elevation is equal to the 1%-annual-chance starting water-surface elevation. Since the floodway width is narrower than the 1%-annual-chance top width the floodway starting WSEL should be higher than the 1%-annual-chance starting WSEL. The Normal depth option with the same energy slope as the 1%-annual-chance profile must be used for the floodway profile and the plan should be rerun. This message may not be applicable when revising only a portion of a hydraulic model.</p>	84	

MP SW 01DK	<p>The name of the stream is (\$streamname\$). The flow regime is subcritical or mixed flow. Starting water-surface elevations are computed from Known WSEs as the downstream boundary condition. Provide backup information on Known water-surface elevations or use same energy slope for all the profiles as the starting boundary condition and rerun the plan.</p>		Backup information on starting WSE included.
NT RC 05	<p>The left overbank n-value of \$nlob\$ and the right overbank n-value of \$nrob\$ are less than or equal to the channel n-value of \$nch\$. Follow the procedure in (FHWA, 1984) to compute the n-value for the natural floodplain and the channel. Or follow the procedure in (USGS, 1977) to compute the n-value for urban development. Please submit supporting information on the evaluation of n-values.</p>	84	n values based on 1995 FIS Restudy Muddy River. Backup information included.
XS DC 02	<p>Constant discharge used for the entire profile for \$assignedname\$ flood. At least two discharges should be selected; one at the mouth and the other at the middle of the watershed or above the confluence of a tributary. Or provide explanation why only one discharge should be used. Other flood frequencies should also be checked.</p>		Flow unchanged from effective model.
XS EC 01R	<p>Cross section extended vertically. Flow Code will be ER. The \$assignedname\$ WSEL of \$wsel\$ is higher than the ending GR station elevation of \$grelv\$. The Right Sta Eff is equal to the ending GR station. If there is divided flow then the cross section should be trimmed or the ineffective flow station should be used to block the divided flow. If there is no divided flow then the cross section should be expanded to cover the \$assignedname\$ floodplain. The HEC-RAS geometry file may need to be recreated using a GIS program. Or provide explanation why the cross section should not be expanded.</p>	87.3	Levee is preventing flow conveyance without extending vertically.
XS LV 02L	<p>The Left levee option is used at this river station. It is the most upstream cross section on the levee. Freeboard is computed by subtracting the 1%-annual-chance WSEL from the levee crest elevation. Left Freeboard of \$lfrbrd\$ is less than 3.5 feet. A without-levee analysis needs to be conducted since the freeboard does not meet the requirements of Part 65.10 of the National Flood Insurance Program regulations (FEMA, 1986). Please submit all the required models for levees.</p>	89; 89.5; 90; 90.5; 91	Minimum 3 feet of freeboard is provided.

XS SW 01DK	The name of the stream is \$streamname\$. The flow regime is subcritical or mixed flow. Starting WSEL is computed from Known WSEL as the downstream boundary for \$Assigned_Name\$ flood. Provide backup information on Known WSEL or use energy slope as the downstream boundary.	84	Backup information on starting WSE included.

GENERAL NOTES

- CONTRACTOR SHALL PROVIDE ALL NECESSARY HORIZONTAL AND VERTICAL TRANSITION BETWEEN NEW CONSTRUCTION AND EXISTING SURFACES TO PROVIDE FOR PROPER DRAINAGE AND OF INGRESS AND EGRESS TO SAID CONSTRUCTION. EXTENT OF TRANSITIONS TO BE DETERMINED BY THE COUNTY ENGINEER.
- EXISTING UTILITIES ARE LOCATED ON PLANS FOR THE CONVENIENCE OF THE CONTRACTOR ONLY. THE CONTRACTOR SHALL BEAR FULL RESPONSIBILITY FOR THE PROTECTION OF UTILITIES AND THE ENGINEER BEARS NO RESPONSIBILITY FOR UTILITIES NOT SHOWN ON PLANS OR NOT IN THE LOCATION SHOWN ON THE PLANS. (CALL BEFORE YOU DIG 811 OR 1-800-227-2600).
- CONSTRUCTION SURVEY: GRADES ARE GIVEN FROM TOP OF STAKES OR NAILS. THE CONTRACTORS ARE CAUTIONED TO OBSERVE THE FOLLOWING RULE IN USING THE GRADE STAKES GIVEN BY CLARK COUNTY. THREE CONSECUTIVE POINTS THAT ARE SHOWN TO BE ON THE SAME RATE OF SLOPE MUST BE USED IN COMMON IN ORDER THAT ANY VARIATION OUT OF A PERFECT STRAIGHT GRADE MAY BE DETECTED. IN CASE ANY SUCH DISCREPANCY IS FOUND, THE SAME MUST BE REPORTED OTHERWISE CLARK COUNTY WILL NOT BE RESPONSIBLE FOR ANY ERROR IN THE GRADE OF THE FINISH WORK.
- WHEELCHAIR RAMPS SHALL BE CONSTRUCTED AT ALL STREET INTERSECTIONS PER CLARK COUNTY STANDARD DRAWING 235 EXACT LOCATION OF RAMP TO BE DETERMINED IN FIELD BY A CLARK COUNTY INSPECTOR.
- STANDARD STREET SECTIONS PER CLARK COUNTY STANDARD DRAWINGS UNLESS OTHERWISE NOTED.
- CURB AND GUTTER WITH A GRADE OF LESS THAN FOUR TENTHS OF ONE PERCENT SHALL BE CONSTRUCTED BY FORMING. EACH JOINT SHALL BE CHECKED FOR GRADE PRIOR TO CONSTRUCTION AND WATER TESTED AS SOON AS POSSIBLE AFTER CONSTRUCTION.
- FINAL ASPHALTIC CONCRETE (AC) PAVEMENT SURFACES SHALL BE ONE-HALF INCH ABOVE LIP OF THE GUTTER.
- EXACT LOCATION OF ALL SAWCUTS TO BE DETERMINED IN THE FIELD BY A CLARK COUNTY INSPECTOR.
- VALLEY GUTTER WITH A GRADE OF FOUR TENTHS OF ONE PERCENT OR LESS SHALL BE CHECKED FOR GRADE PRIOR TO CONSTRUCTION AND WATER TESTED AS SOON AS POSSIBLE AFTER CONSTRUCTION. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO INSURE PROPER DRAINAGE ACROSS ALL VALLEY GUTTERS.
- ALL OFF-SITE IMPROVEMENT CONSTRUCTION SHALL CONFORM TO THE "UNIFORM STANDARD SPECIFICATIONS AND STANDARD DRAWINGS CLARK COUNTY AREA NEVADA" AND "CLARK COUNTY SUPPLEMENT TO UNIFORM STANDARD DRAWINGS AND SPECIFICATIONS", LATEST REVISION.
- NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR UTILITIES OR STRUCTURES NOT SHOWN ON THE DRAWINGS. CONTRACTOR TO VERIFY THE EXACT LOCATION OF UTILITIES PRIOR TO START OF CONSTRUCTION. THE CONTRACTOR'S RESPONSIBILITIES REGARDING UTILITIES SHALL BE AS REQUIRED UNDER SECTION 107.17 OF THE UNIFORM STANDARD SPECIFICATIONS FOR CLARK COUNTY AREA, NEVADA AND AS PROVIDED IN THE SPECIFICATIONS. THE CONTRACTOR SHALL USE EXTREME CARE WORKING OVER OR NEAR ANY EXISTING GAS MAINS.
- THE CONTRACTOR SHALL TAKE ALL PRECAUTIONARY MEASURES NECESSARY TO PROTECT EXISTING IMPROVEMENTS, WHICH ARE TO REMAIN IN PLACE FROM DAMAGE. ALL SUCH IMPROVEMENTS OR STRUCTURES DAMAGED BY THE CONTRACTOR'S OPERATIONS SHALL BE REPAIRED OR RECONSTRUCTED TO THE SATISFACTION OF THE ENGINEER AT THE EXPENSE OF THE CONTRACTOR.
- FENCES, SIGNS, STRUCTURES, LIGHTS AND OTHER EXISTING IMPROVEMENTS WITHIN STREET R/W SHALL BE REMOVED WHERE SHOWN ON THE CONTRACT DRAWINGS, AND AS REQUIRED BY THE ENGINEER.
- REPLACEMENT, RELOCATION OR RECONSTRUCTION OF ALL EXISTING IMPROVEMENTS INCLUDING FENCES, WALL SIGNS, AND ALL OTHER ITEMS APPLICABLE TO THIS CONTRACT SHALL BE AS REQUIRED BY THE ENGINEER.
- ALL BARRICADING AND TEMPORARY TRAFFIC CONTROL DEVICES OR METHODS USED DURING CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE "NEVADA TRAFFIC CONTROL MANUAL, 1986 PUBLISHED BY THE STATE OF NEVADA, DEPARTMENT OF TRANSPORTATION, EXCEPT AS OTHERWISE PROVIDED IN THE CONTRACT DRAWINGS.
- THE CONTRACTOR SHALL BACKFILL AND FINAL GRADE ALL CUT OR FILL SLOPES TO MATCH EXISTING CONDITIONS TO THE SATISFACTION OF THE ENGINEER.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERTICAL ADJUSTMENT OF ALL EXISTING SANITARY, WATER AND STORM SEWER MANHOLES TO THE FINAL FINISH GRADES IN ACCORDANCE WITH THE DETAILS SHOWN ON THE CONTRACT DRAWINGS AND IN ACCORDANCE WITH SECTION 609 OF THE "STANDARD SPECIFICATIONS".
- 48 HOURS PRIOR TO START OF CONSTRUCTION THE CONTRACTOR SHALL CONTACT:

- PER SPECIAL PROVISIONS SECTION 637.03.03, PLEASE REFER TO THE LAS VEGAS VALLEY CONSTRUCTION SITE BEST MANAGEMENT PRACTICES GUIDANCE MANUAL, SECTION 3.5.1 FOR THE STORM WATER MANAGEMENT NOTES AND APPENDIX B FOR THE VARIOUS REQUIRED CHECKLISTS. THE MANUAL CAN BE FOUND HERE: <http://hstomwater.com/pdfs/LV-Construction-Site-BMP-Guidance-Manual-Jan-2009.pdf>

CLARK COUNTY WATER RECLAMATION DISTRICT NOTES

- ALL CONSTRUCTION AND MATERIALS SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE DESIGN AND CONSTRUCTION STANDARDS FOR WASTEWATER COLLECTION SYSTEMS AND THE UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFF-SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA, AS AMENDED. IN ALL CASES, THESE STANDARDS SHALL SUPERSEDE THE UNIFORM STANDARD SPECIFICATIONS. IT WILL BE THE RESPONSIBILITY OF THE CONTRACTOR TO BE AWARE OF THE CONTENTS OF THE ABOVE SPECIFICATION BOOKS.
- THESE STANDARDS SHALL APPLY TO ALL CONSTRUCTION.
- SEWER MAINS ONLY TO BE LAID IN SEWER TRENCHES.
- ALL LATERALS TO BE LAID AT NOT LESS THAN MINIMUM SLOPE AS SHOWN IN THESE STANDARDS
- IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PERFORM CONSTRUCTION AS PER PLANS. ANY ADDITIONS, DELETIONS, OR CHANGES SHALL FIRST MEET WITH THE APPROVAL OF THE CONTROLLING AGENCY.
- SOIL TESTING SHALL BE IN ACCORDANCE WITH SECTION 3.11 OF THESE STANDARDS.
- ALL EXFILTRATION, INFILTRATION, AIR TESTING AND TELEVISION OF LINES SHALL BE IN ACCORDANCE WITH THESE STANDARDS.
- CUT SHEETS MUST BE SUBMITTED TO THE AGENCY BEFORE CONSTRUCTION WILL BE PERMITTED TO START.
- ALL CONTRACTORS INSTALLING SEWER MAINS THAT WILL BE UNDER THE JURISDICTION OF THE CONTROLLING AGENCY MUST BE CLASS "A" CONTRACTORS.

CLARK COUNTY WATER RECLAMATION DISTRICT _____ DATE _____
 COWRD PROJECT CONTROL NUMBER IS _____

SIGNATURE ON THESE PLANS WILL NOT BE CONSTRUED TO BE A PERMIT FOR OR AN APPROVAL OF ANY VIOLATION OF CLARK COUNTY WATER RECLAMATION DISTRICT RULES, REGULATIONS, OR DESIGN AND CONSTRUCTION STANDARDS. THE APPROVAL OF THESE DRAWINGS DOES NOT GUARANTEE CAPACITY IN THE DISTRICT'S COLLECTION OR TREATMENT SYSTEM.

MOAPA VALLEY WATER DISTRICT (MVWD) NOTES

- ALL WORK TO CONFORM TO MVWD STANDARDS. (CONSTRUCTION STANDARD PLATES AVAILABLE UPON REQUEST.)
- ALL WORK, EXCEPT AS MODIFIED HERON OR BY NOTE 1, SHALL CONFORM TO THE UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OFF-SITE IMPROVEMENTS, CLARK COUNTY AREA
- WRITTEN NOTICE IS TO BE GIVEN THE MOAPA VALLEY WATER DISTRICT AT LEAST 48 HOURS PRIOR TO ACTUAL CONSTRUCTION.
- ALL LINES TO BE INSTALLED, PRESSURE AND LEAKAGE TESTED AS PER AWWA STANDARDS. (PVC-C605, A-C PIPE-C603, DUCTILE IRON PIPE-C600).
- ALL MAIN LINES SHALL BE DISINFECTED AS OUTLINED IN AWWA-C-651 (AS LATEST REVISED), "AWWA STANDARD FOR DISINFECTING WATER MAINS".
- DEFLECTION ANGLES SHALL NOT EXCEED THE MANUFACTURERS SPECIFICATIONS.
- ALL METERS SHALL BE LOCATED OUTSIDE OF DRIVEWAYS.
- ALL VALVE BOXES TO BE PLACED OUTSIDE VALLEY GUTTERS AND ABOVE FINISHED GRADE.
- TRACE WIRE REQUIRED TO BE INSTALLED ON ALL NEW LINES.
- ALL NEW FIRE HYDRANTS TO BE EITHER "KENNEDY" K-81A OR "MUELLER" CENTURIUM 200, MECHANICAL JOINT SHOE AND TO BE INSTALLED/INSPECTED AS PER CLARK COUNTY FIRE DEPARTMENT SPECIFICATIONS.
- ONLY MVWD STAFF IS AUTHORIZED TO OPERATE EXISTING VALVES, HYDRANTS, ETC.
- MVWD IS LOCATED AT 601 N. MOAPA VALLEY BLVD, OVERTON, NV 89040, (702) 397-6893. HOURS: 8 A.M. TO 4:30 P.M.

NEVADA STORMWATER GENERAL PERMIT FOR CONSTRUCTION ACTIVITIES STANDARD NOTES

- THE OWNER, SITE DEVELOPER, CONTRACTOR, AND/OR THEIR AUTHORIZED AGENTS SHALL EACH DAY REMOVE ALL SEDIMENT, MUD, CONSTRUCTION DEBRIS, OR OTHER POTENTIAL POLLUTANTS THAT MAY HAVE BEEN DISCHARGED TO, OR ACCUMULATED IN, THE PUBLIC RIGHTS OF WAY OF CLARK COUNTY AS A RESULT OF CONSTRUCTION ACTIVITIES ASSOCIATED WITH THIS SITE DEVELOPMENT OR CONSTRUCTION PROJECT. SUCH MATERIALS SHALL BE PREVENTED FROM ENTERING THE STORM SEWER SYSTEM.
- ADDITIONAL CONSTRUCTION SITE DISCHARGE BEST MANAGEMENT PRACTICES MAY BE REQUIRED OF THE OWNER AND HIS OR HER AGENTS DUE TO UNFORESEEN EROSION PROBLEMS OR IF THE SUBMITTED PLAN DOES NOT MEET THE PERFORMANCE STANDARDS SPECIFIED IN SPECIAL PROVISIONS SECTION 637.03.03 AND THE LAS VEGAS VALLEY CONSTRUCTION SITE BMP GUIDANCE MANUAL.
- TEMPORARY OR PERMANENT STABILIZATION PRACTICES WILL BE INSTALLED ON DISTURBED AREAS AS SOON AS PRACTICABLE AND NO LATER THAN 14 DAYS AFTER THE CONSTRUCTION ACTIVITY IN THAT PORTION OF THE SITE HAS TEMPORARILY OR PERMANENTLY CEASED. SOME EXCEPTIONS MAY APPLY; REFER TO THE NEVADA STORMWATER GENERAL PERMIT FOR CONSTRUCTION ACTIVITY NVR 100000, SECTION III.A.5.
- AT A MINIMUM, THE CONTRACTOR OR HIS AGENT SHALL INSPECT ALL DISTURBED AREAS, AREAS USED FOR STORAGE OF MATERIALS AND EQUIPMENT THAT ARE EXPOSED TO PRECIPITATION, VEHICLE ENTRANCE AND EXIT LOCATIONS, AND ALL BMPs WEEKLY, AND WITHIN 24 HOURS AFTER ANY RAIN EVENT OF 0.5 INCHES OR MORE. THE CONTRACTOR OR HIS AGENT SHALL UPDATE OR MODIFY THE STORMWATER POLLUTION PREVENTION PLAN AS NECESSARY. SOME EXCEPTIONS TO WEEKLY INSPECTIONS MAY APPLY, SUCH AS SUSPENSION OF LAND DISTURBANCE ACTIVITIES. REFER TO THE NEVADA STORMWATER GENERAL PERMIT FOR CONSTRUCTION ACTIVITY NVR100000, SECTION III.A.12.
- ACCUMULATED SEDIMENT IN BMPs SHALL BE REMOVED WITHIN SEVEN DAYS AFTER A STORMWATER RUNOFF EVENT OR PRIOR TO THE NEXT ANTICIPATED STORM EVENT, WHICHEVER IS EARLIER. SEDIMENT MUST BE REMOVED WHEN BMP DESIGN CAPACITY HAS BEEN REDUCED BY 50 PERCENT OR MORE.

GENERAL STRUCTURAL NOTES

1. **DESIGN SPECIFICATIONS:** AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, 5TH EDITION, 2010 WITH INTERIM REVISIONS.
2. **CONSTRUCTION SPECIFICATIONS:** UNIFORM STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, OFF-SITE IMPROVEMENTS, CLARK COUNTY AREA, NEVADA.
3. **EXISTING UTILITIES:** THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES WITHIN THE WORK AREA, AND PROVIDING PROTECTION FOR THE VARIOUS UTILITIES AFFECTED PRIOR TO PROCEEDING WITH THE WORK.
4. **CONCRETE:** CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH AT 28 DAYS OF $f'_c=4,500$ PSI AND A MAXIMUM WATER TO CEMENT RATIO, BY WEIGHT, OF 0.45. USE TYPE V CEMENT PER ASTM C-150. ALL EXPOSED EDGES OF CONCRETE SHALL BE CHAMFERED 3/4", UNLESS NOTED OTHERWISE.
5. **REINFORCING STEEL:** ALL REINFORCING STEEL SHALL BE ASTM A615 GRADE 60. DIMENSIONS ARE FROM OUT TO OUT OF BARS. MINIMUM CLEARANCE TO REINFORCING STEEL SHALL BE 2" UNLESS NOTED OTHERWISE. HOOKS MAY BE ROTATED OR TILTED AS NECESSARY TO PROVIDE THE PROPER CLEARANCES.
6. **BEDDING MATERIAL:** BEDDING MATERIAL SHALL BE 6-INCHES OF CLARK COUNTY TYPE II AGGREGATE BASE COMPACTED TO 95% OF THE MAXIMUM DRY DENSITY AS ESTABLISHED BY ASTM TEST METHOD D-1557. EXPOSED NATIVE SOILS IN BOTTOMS OF EXCAVATIONS SHALL BE SCARIFIED TO A DEPTH OF 6-INCHES, MOISTURE-CONDITIONED TO WITHIN 2% OF OPTIMUM MOISTURE CONTENT AND COMPACTED TO 95% PER ASTM D-1557.
7. **INVERTS, SLOPES, BEARINGS, ALIGNMENTS, AND ELEVATIONS SHOWN ARE FOR "REFERENCE ONLY".** INFORMATION ON CIVIL DRAWINGS SHALL GOVERN.
8. CONTRACTOR SHALL PROVIDE SLOPE STABILIZATION, SHEETING, BRACING, AND/OR SHORING AS REQUIRED TO PROTECT EXISTING EMBANKMENTS, STRUCTURES, AND UNDERGROUND ITEMS.
9. REFER TO CIVIL PLANS FOR FINISHED GRADE ELEVATIONS.

CONCRETE SLOPE PAVING NOTES

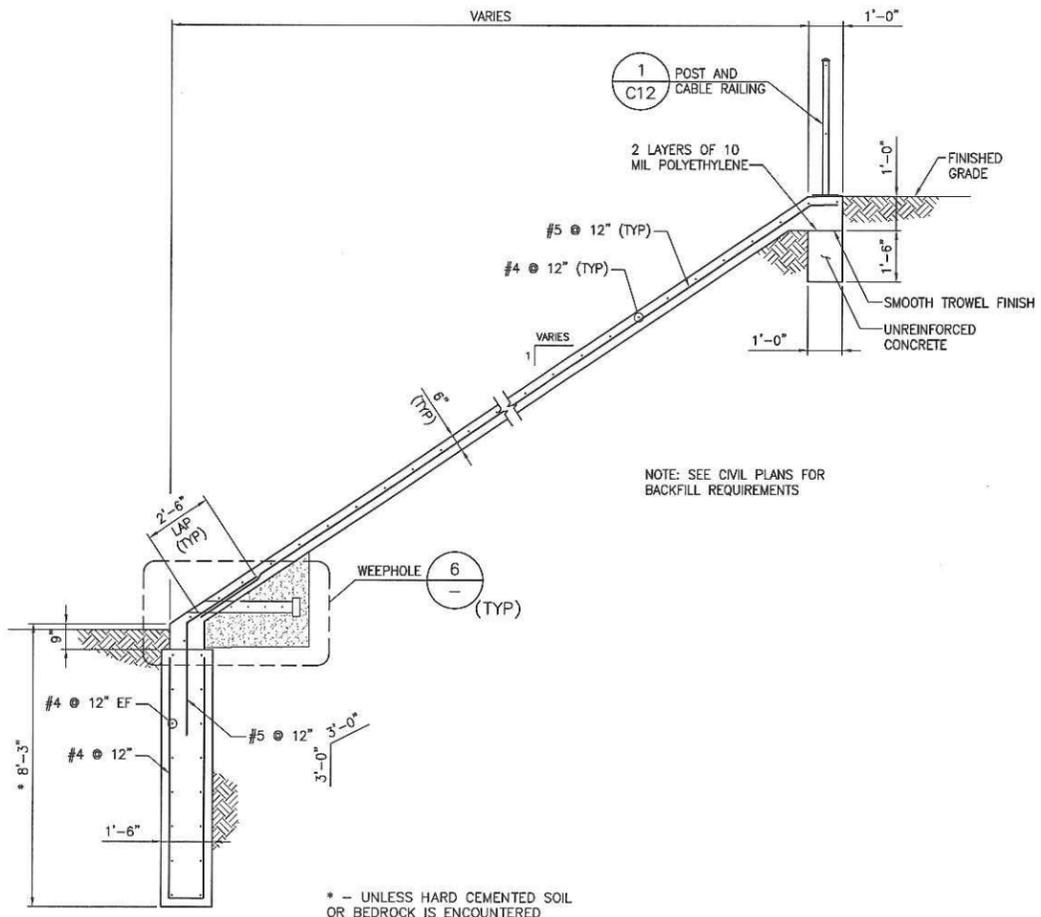

1. TRANSVERSE AND LONGITUDINAL JOINTS IN SLOPE PAVING WILL BE REQUIRED AT THE END OF EACH CONTINUOUS POURING OPERATION. SEE TYPICAL CONSTRUCTION JOINT DETAIL. TRANSVERSE CONSTRUCTION JOINTS SHALL NOT BE PLACED WITHIN 30 FEET OF AN EXPANSION JOINT.
2. ALL TRANSVERSE JOINTS IN SLOPE PAVING SHALL BE IN THE SAME PLANE. NO STAGGERING OF JOINTS WILL BE PERMITTED UNLESS SHOWN OTHERWISE. TRANSVERSE CONSTRUCTION JOINTS SHALL BE NORMAL OR RADIAL TO CENTERLINE OF CONSTRUCTION.
3. ALL SINGLE LAYER REINFORCEMENT SHALL BE PLACED IN THE CENTER OF CONCRETE UNLESS NOTED OTHERWISE.
4. IN CURVED PAVING SECTIONS, TRANSVERSE BARS SHALL BE PLACED NORMAL TO THE CENTERLINE.
5. IN CURVED PAVING SECTIONS, THE MAXIMUM SPACING OF BARS SHALL NOT EXCEED THAT SHOWN FOR TYPICAL SECTIONS. STEEL SHALL BE PLACED RADIALLY FROM THE MAXIMUM SPACING.
6. IN CURVED PAVING SECTIONS, TRANSVERSE JOINTS SHALL BE NORMAL TO CENTERLINE AND SHALL NOT EXCEED 30' MAX SPACING.
7. AT THE BEGINNING AND ENDING OF ALL POURS, A COMPLETE CURTAIN OF MAIN REINFORCEMENT SHALL BE PLACED 3-INCHES FROM THE TRANSVERSE CONSTRUCTION, CONTRACTION AND EXPANSION JOINTS.
8. WEEPHOLES ARE REQUIRED AT 15-FOOT OC MAX PER THE TYPICAL WEEPHOLE DETAIL.
9. WEAKENED PLANE JOINTS TO BE CENTERED WITH WEEPHOLES WHEN JOINTS OCCUR.
